My view on Stern and his type going to satellite is: Good-bye, why are you still here? Maybe all of talk radio will follow as well. I live near Ocala Fl and there is no decent radio around here. After hurricanes Frances and especially Jeanne the stations were off the air. No local news, hardwired telephone service was spotty and the cell system was almost useless. What did we get when the stations started coming back on? Silly kids yaking all night long thinking they are funny and bad reports of where to find ice or water. The next station that came on mentioned the hurricane and went back to Rush Limbagh. The last thing people need when they have no power, little food or water is boring syndicated talk radio. If I was working there I would have pushed to get as much accurate information as I could to the people who needed it. What good would Satellite radio be during a disaster? Let them have the rubbish they deserve. Even though my favorite AM radio station is on Sirius, I can't, and won't spend a monthly fee like that for one radio station. FOr the same price I can get broadband internet instead of dialup and listen to a stream while stuck at home all the time.

Yeh. yeh, yeh...
and by the late 1900s my fifth grade teacher told us we'd all be riding
around in air suspension cars. Yawn. This rally 'round the "new
technologies" is crap. Few of these things work as well as we are told they
do on paper. And those who are most enthused are those who stand to gain
financially. Period.
We're all fools to gobble up this  gadgetry that rarely works as well as it
is touted. It is nothing more than a planned cycle to keep us buying. Take a
look at your local thrift store and see what you paid $400 for only ten
years ago that is now "obsolete." Yup, we're damned gullible idiots. And
those in the "new technologies" business are laughing their asses off at us.

I like the personalities.  I listen primarily to Standard Time and Broadway's Best.  The jocks know their music and are entertaining.  They're also versatile.  Jason Drew is part of the ''Morning Mess'' on Sirius Hits 1.  Later in the day he's the ''Broadway Baby'' on Broadway's Best.  I've also heard one of the standards personalities down the dial playing country.

Michael - Can you pick up WFLA, Orlando, on 540?  I found that station pretty useful during the hurricanes except, of course, for local info.  I live in Lakeland and can pick them up even in the daytime.  WFLA 970 in Tampa is stronger here and they had decent storm-related info too.  But none of the powerhouse stations are in a position to serve the Ocala area with local news.  One source you could check out is the local ham emerg. net on VHF.  Their traffic usually includes info on supplies being delivered to aid stations as well as general storm and survival-related info.

BTW, how much do you pay for broadband internet?  I pay $40/month for Road Runner.  I believe XM radio is "only" $10.95/month.  I am tempted to try it since I am in my car a good portion of my work day and there is zero on AM radio that interests me.  FM is almost as bad.

Regards,

Greg

A station in Dallas GA, a suburb of Atlanta, held the WKRP calls for a while. The following information is from Georgia Tech's local radio history page at:

http://users.ece.gatech.edu/~mleach/radio/am.html

1500 - WDPC - Religion - Dallas GA

Simulcasts AM 1520. The station's frequency is the 2nd harmonic of 50 kW WSB-AM, generally making reception impossible in Atlanta. The station went on the air in August 1979, with the calls WKRP. The engineer who put it on the air was Tom Hayes, a student who worked for a while for me as a lab assistant. The owner was a Dallas, GA, businessman. The original management hoped to penetrate the Atlanta area with a top-40 format. The station changed hands several times and then went dark. It is back today with a religious format. The original calls were obtained only after it was pointed out to the FCC that Mary Tyler Moore Productions was neither a permittee, nor a licensee. Therefore, the 'hold' on the calls WKRP, from the TV series "WKRP in Cincinnati", was null and void. None of the invited TV cast members accepted an invitation to the opening ceremonies where the first record was unintentionally played at the wrong speed.

Another side note: Apparently one of the creators of "WKRP In Cincinnati" worked at WQXI in Atlanta during its Top 40 glory days and based the show and several characters on his memories of it.

GTT

   I can pick up both of them, but neither are very clear.  The only two
meter receiver I have at the moment needs a regulated 12 VDC power
supply and was out in my shop where I couldn't get to it.

Earthlink is $45 a month, the same as RR or AOL broadband here in Belleview.  I don't drive much anymore, I have Carpal Tunnel in both hands and nerve damage so a drive across town can be painful.  I am now on full disability because I can't work any set schedule and it drives me crazy.  I was working at Microdyne as a test and engineering tech when I had to stop working a few years ago.  I'll bet there is still some equipment in use in stations you've seen that was built in Ocala, or their AFC microwave antennas.

I wanted to fix up a nice shop here at home to enjoy my retirement by collecting and restoring oddball electronics.  My benches are still covered with plastic since the hurricanes.  I was out there today and one of my shelves has snapped due to water damage.

I agree with nothing good on the local radio stations.  The only station I would listen to on Satellite is WSM, and its on Sirius.  Since I'm at home 90 percent of the time I figured it was cheaper to spend the money on a better internet feed.

I have a friend who is still an active contract engineer in the area and get the horror stories when he has time to stop by the house.  If you're anywhere close to Ocala email me sometime.

I asked NIST a few years ago if they could add a subcarrier to the C band NASA feed with the 60 Khz modulation of WWVB, but I couldn't convince them it could be done. They insisted that you can't add a subcarrier from a second uplink which I know isn't true. United Video was doing it in the mid '80s on their WGN uplink, and fed their tv program guide from Salt Lake City. Prior to my idea they leased two phone lines to Chicago for about $10,000 a month. It took me a while to convince the engineer of our microwave division that it would work.

Thanks for the invite.  Sorry to hear about the storm damage to your shop.
I was lucky here in Lakeland.  Jeanne was the worst of the hurricanes for us
but all the damage I suffered was outside - trees down in the back yard,
fence damage, etc.  I still have the lower portion of a large elm lying on
my crushed storage shed, but there's not much of value in there.

WFLA TV (chan 8/Tampa) was a good info source during all the storms, WFLA
radio was decent, and I have several scanners, so I could monitor local hams
and public service agencies around the area.

I'm sure members of this group would be interested when you get your shop up
and running

Best regards,

Greg

Leads me to wonder whether Q102 (WKRQ-FM Cincinnati) was named after the show.
I've wondered for a long time whether the calls were based on the show or
whether it was the other way around.

"As we evolve into the future of Amateur Radio what do you think we will invent? Will the ARRL have new interplanetary DX entities? How do you envision the typical Radio Amateur in 2050?"

Hams were at one time known for their ability to tinker and put together a radio literally from a box of parts.  New equipment has become so sophisticated and controlled by IC's that there are few opportunities for the basement tinkerers to really build something from scratch these days.  By 2050 I suspect the opportunity will have completely gone.  There will be plenty of opportunities foe EE's and others with similar training to design and build communications equipment in the lab however.

I'm not sure there will be a need for a licensed radio amateur in the year 2050.  The hobby is all about communicating with others over distances from 100 to 5000 miles away.  Although the telephone certainly improved access, amateur radio gave many access to people around the globe.  The world of communications has changed since the 1950's and there are numerous ways to communicate over great distances that do not require a license.  The internet, email, VOIP, cell phones, satellite radio are but a few of the newer technologies that do essentially the same thing that amateur radio does.  Provide access to people and information about the world.

Safety around lethal voltages was at one time a very good reason for licensing radio operators, and it still is.  Unfortunately for the hobby I think that by the year 2050 most people will have figured out that they don't need potentially lethal equipment and the requisite license to communicate with people and otherwise get information about the world.  There will be too many other competing options that require no license.

And the ARRL?  Well, it continues to function very well as the gatekeeper for this hobby.  It seems to be most interested in requiring outdated tests for radio licenses and otherwise holding on to a static image of the radio hobbyist. It's unfortunate that the ARRL sees it's mission as one of keeping the unkempt hordes on the far side of the gate.  It should instead be looking at new ways to entice younger members into a hobby that needs to be opened up.

** CANADA**

MEET PROMO GIRL: THE VOICE THAT HAS STEPPED OUTSIDE THE CBC RADIO BOX
-- by Elizabeth Payne, The Ottawa Citizen, February 19, 2005

http://www.canada.com/ottawa/ottawacitizen/news/styleweekly/story.html?id=39ff0669-4ff7-42fd-9346-adf55824c5ae

Dear Promo Girl

Imagine you are listening to the radio, minding your own business, when a persistent voice seeps out of the box and into your head. Imagine that, instead of absorbing the substance of the voice's message, you become fixated on its style. Where did that voice come from, you wonder, and who is the person attached to it? Is she younger than me? Is she being ironic? I thought I was just listening to CBC radio, is there something I'm missing here?

Imagine, Promo Girl, that someone younger and chirpier has taken control of your solid, predictable (OK, sometimes dull) radio and that it hasn't quite sounded the same since ...

At least that's how it feels ever since Promo Girl became a regular part of the CBC Radio 1 broadcasting day. There she is, her quirky, chirrupping voice giving us a heads-up on what's coming up later on the Mother Corp's daily schedule.

"So the world has ended, a guy's still got to keep busy ... " She pops in between programs throughout the day, waking me up from whatever CBC-induced REM state I'm in and breaking into my consciousness.

Is that a smile I hear in her voice? No, that's just her style; she's happy, she's a bit rumpled, she was up late chatting with some girlfriends over a few glasses of wine and has not had time to completely pull herself together but, hey, those sort of details don't bother Promo Girl.

Promo Girl is, in fact, a figment of CBC promotion's imagination. The voice belongs to an actress (who remains anonymous), and the persona is pure fantasy. Still, she is quickly becoming a very real part of CBC Radio. And listeners, like me, are asking ourselves: What does this mean?

Chris Boyce, an executive producer with CBC's Saturday afternoon variety show Definitely Not the Opera, helped develop Promo Girl. The network was looking for someone who would give a "consistent sound and tone" to its on-air promotions, he said in an interview from Winnipeg. What they didn't want was some "voice of God" announcer popping in between programs to talk about the daily schedule in deep, ringing, intimidating tones. They wanted someone more casual and engaging.

Read: Someone who would appeal to that coveted younger listenership. "We wanted something that wouldn't sound like every other broadcaster ... that would cut through the CBC Radio 1 program flow," Boyce said. The concept was launched just in time for the network's summer season last year.

"We were looking for something that was playful, fun and summer-like ... There was just something about her that jumped out of the the radio and felt like summer." Promo Girl was born.

Well, actually, the name wasn't born until the voice began to develop a character. It was the actress who first began calling herself Promo Girl. And the name it caught on.

As if to underline the fact, Promo Girl are among the first words out of Mark Thompson's mouth when I contact the manager of English radio communications. "So you want to do something on Promo Girl ... " he says.

Thompson tells me that Promo Girl, in less than a year on the job, has gotten a "terrific" response from the public.

"People seem to love her," he says, although he acknowledges there are also those who "absolutely hate" Promo Girl. "She gets inside people's heads." No kidding.

That is what got me thinking about Promo Girl. I don't absolutely hate her, although you don't have to look far for evidence that others do. One chat room participant said he switched to another radio station because he couldn't stand hearing Promo Girl's spots. "CBC's Promo Girl is not only annoying, but the tone and content of her promos often is (sic) inappropriate for the program being promoted." Another placed Promo Girl fourth on a list of Most Annoying Canadians. She landed behind Don Cherry but ahead of Celine Dion and that smug Canadian Tire commercial guy. Ouch.

Which is a bit unfair. She's not annoying. She would be quite endearing if I had met her in a sitcom or on the pages of a paperback. But I'm not so sure I want to share radio time with her.

I hate the way she gets inside my head and hijacks my radio listening experience. One minute I'm passively listening to the comforting drone of interviews mingled with low-key small talk, wondering whether we can all stand pasta again for dinner, the next minute Promo Girl is sticking her head out of the radio and speaking DIRECTLY to me.

Suddenly, I feel as if I am not alone. Someone is listening to the radio with me, and she sounds like she wants to be my friend. She keep asking me questions as if she might actually expect a response.And then there is her voice. It sounds young, but its main characteristic is that it is hip. Promo Girl has a youthful hipness that can sound incongruous when she's promo-ing Quirks and Quarks, say, or a serious piece of journalism.

None of which are huge problems for many listeners. "I love Promo Girl," one chat room participant said. "She sounds like a real person with some of the natural idiosyncratic unpolished timbre that you don't hear from a smooth, professionally-trained beauty voice."

This is true. But was is really gnawing at me about Promo Girl is the post-Seinfeldian irony embedded in her voice. That's CBC radio, she seems to be saying, but this is us, and we're younger and hipper than all that. We see the world differently.

And, ever since the days when I munched my peanut butter sandwich while CBC Toronto offered its lunch-hour agricultural reports about beef and pork futures (I can still taste peanut butter when I think of  the words "choice and good ones"), I have viewed CBC Radio as the home of those older, wiser and with better pronounciation and grammar skills than I.

Promo Girl, with her Americanized vowels ("9:30 in Newfound-lay-end") just hammers home something I have been trying to ignore. I'm dated. You know when staid CBC starts sounding hipper than you, that you are over the hill. Sigh. Thanks, Promo Girl, I'd like to get together for drinks sometime, but it would probably be past my bedtime.

Elizabeth Payne is Style Weekly deputy editor. Her column runs every second week. � The Ottawa Citizen 2005 (via Bill Westenhaver, DXLD)

Personally, I find Promo Girl exceedingly annoying! 73- (Bill Westenhaver, QC, DX LISTENING DIGEST)

The end of radio...not if you have a good team, creative not follow the "sheep". KFI in LA best talk station in the country the talent of course is important the station sounds exciting, best news tight production . Sorry to say the music stations "AIN'T" got it. The elements that make great radio stations will always be around for those who know how to use those "elements"..roger carroll

   WKRC was there before the show :)

| Leads me to wonder whether Q102 (WKRQ-FM Cincinnati) was named after the show.
| I've wondered for a long time whether the calls were based on the show or
| whether it was the other way around.

As I've always loved this show (inasmuch as it had its own Ginger/Mary Ann
debate....Bailey - Jennifer) I can tell you that the connections to Cincinatti
radio ran deep.  Not only WQXI, but also WLW and WKRC.  But WKRQ (the last two
letters suggesting Rock, which of course was the format then, and probably
still) was simply a variant of the AM, WKRC, and both stations were owned by
Taft (as in the President, and descendents, including Senator Robert)
Broadcasting, which it'd owned for many, many years.  So in this case WKRP was,
at best, suggested by the previous knowledge of WKRC/WKRQ.  I'm sure there's a
fan website out there that is more accurate and expansive than my memories of
it.

Hi,

I am a new one to how radio works, and had a couple of Qs. Do the BBC broadcast from their studio and then relay around the country the message or is it sent by wires to the transmitters and then broadcast?

Also, with the event of DAB - even though this DRM is being developed, do we know if the BBC is planning to therefore stop MW/LW broadcasts and only use the DAB service?

Basic I know - but thanks for your help in advance.

Antony

I could never understand that attitude. It is true that the state of the art is such that building something as sophisticated as commercial gear is pretty much out of reach of most amateurs, low tech gear is easier than ever to build. Station accessories, qrp gear, ect are much simplified by ICs. Oscillators, amplifiers, regulators, ect are all available in IC form. Just assemble the blocks. In any case, if one wants to do it completely from scratch, the components are still readily available.

<hjsjms@cs.com> wrote in message news:d05imm$nme$1@xuxa.iecc.com...

I don't know if anyone remembers this, but I recall a time  when a CBC program called "Brave New Waves" was on WXPN in  Philadelphia during the late 80s and early 90s. Of course that was before  the Adult Alternative thing really kicked in there. Anyway, I'm a collector and  I'm looking for tapes of that show during that period. If anyone can help me  out, or even barely remember those days, please let me know.

I'm willing  to offer currents for trade to anybody who can help me out. I've already had  some help, but I'm hoping to start a collection. So, if you can assist, hope to  hear from you.

Someone mentioned to me that there was an interview with Mel Karmazin in the Sunday NYT Magazine....

I can't seem to find it...Anyone see it or know where it is online?

I was told on 2/28....which leads me to believe it was in the 2/27 paper...but I can't find it...

Anyone know where it is?

Thanks!

Who needs that stuff?  You can use generic DSP boxes to build modulators
and demodulators.  In fact, you can build a complete IF strip with a
combination of software and an inexpensive DSP.  Combine that with a front
end of your choice and you have a pretty swanky receiver.  Use the same DSP
along with an upconverter stage and an RF amp and you now have a transmitter
too.

Old VCRs and cellphones are an absolute goldmine of nifty RF parts!

Thursday, 3 March 2005

Radio France are to unveil plans for an all-digital distribution network, at the Digital Radio Mondiale TM (DRMTM) consortium's annual General Assembly meeting in Paris next week.

Radio France, a DRM member since 2001, will transmit special preview DRM medium-wave/AM broadcasts of France Culture audio and multimedia content from March 7-11, to mark the announcement.

The new Radio France distribution network will provide listeners with a range of digital broadcasting technologies including DRM. Radio France will host DRM's General Assembly, Steering Board and committee meetings at its headquarters, Maison de la Radio, from March 7-10.

DRM members TDF and Thales are assisting with Radio France's special preview DRM broadcasts. TDF will transmit the Radio France broadcasts from its Villebon transmitting station, which is located approximately 20 kilometres southwest of Paris. TDF and Thales have modified an existing 300 kW medium wave solid state transmitter, from Thales' S7 family, for the DRM broadcasts.

"France's upcoming migration to digital radio necessitated our investment in a new distribution network that will work seamlessly with any digital broadcasting system, such as DRM, DAB, DVB and wireless Internet," says Sylvain Anichini, Deputy General Manager of Radio France. "We have designed a flexible networking system that allows for a range of options, without the constraints of long-term technological choices. This will enable Radio France to move forward in line with digital broadcasting's evolution, including domains such as source coding and datacasting." Over the past few years, Radio France has digitalized its production and archive sectors, following the same principle of designing open systems.

DRM Chairman Peter Senger heralded Radio France's news, saying, "The prospect of DRM broadcasts on Radio France is a significant development in the system's growth within Europe. I am delighted that DRM's members - who are broadcasters, network operators and manufacturers from around the globe - will have the opportunity to experience Radio France's DRM preview in Paris next week."

Tuesday, 1 March 2005

The BBC is to introduce three new DAB transmitters in Northern Ireland which will double its DAB coverage in the north-west and west.

The new transmitters will be sited at Brougher in Tyrone, Limavady and

Sheriff's Mountain in Londonderry.

The first two of these transmitters will come on stream in late spring with the third following in the summer.

The BBC is planning to expand coverage to 90% of the population.

Barry Crimmins, activist and comedy writer from Air America Radio, and Randy Credico, political activist, comedian, and WBAI personality bring you the best comedians and political comedy writers every Tuesday night. They rant at the current political scene, doing material that will never make it to the airwaves as we know them. Depending on which artists and writers appear on any given night echoes of Woody Guthrie, Lord Buckley and Lenny Bruce may be heard in the house.

http://www.barrycrimmins.com/index.php?page=home

8PM Tuesday nights at
   Rocky Sullivan's  Bar

129 Lexington Ave @ 28th street.
Manhattan

(One block east of the 28th st. Lexington Ave local subway stop.)

Most nights the hat is passed.

>From satellite to podcasts, programming is exploding -- but the fight for profits will be ferocious.

How fast is technology turning radio upside down? Ask Brian Ibbott. Last September, when the wannabe Denver deejay started playing music on the Internet, the term for what he was doing -- podcasting -- had been around for two weeks. These days the 35-year-old produces a half-hour show of popular songs called Coverville. Some 9,000 devotees download it three times a week to play on -- what else? -- their iPods. And if they tire of Coverville, they now have 3,500 other podcasts -- and counting -- to choose from.

For all the hullabaloo it's generating, podcasting is not even close to being a business yet. While startups such as Odeo and The Podcast Network are providing technological support and creating a podcasting network, right now Ibbott has barely enough ads to cover expenses, and most podcasters work for free.

Maybe a few will come up with a way to make a living doing it. Maybe not. Regardless, a trend is afoot that could transform the $21 billion radio industry. Consider the basics: With no licenses, no frequencies, and no towers, ordinary people are busy creating audio programming for thousands of others. They're bypassing an entire industry.

The digital revolution took its time getting to radio. Now it's exploding -- and the big bang goes far beyond podcasting. As radio shows are turned into digital bits, they're being delivered many different ways, from Web to satellite to cell phones. Listeners no longer have to tune in at a certain time, and within range of a signal, to catch a show or a game. As the business goes digital, the barriers to entry -- including precious airwaves -- count for less and less.

A host of new players is piling in. They include satellite-radio upstarts XM (XMSR ) and Sirius (SIRI ), new-media giants such as Yahoo! (YHOO ) and MSN, and regular folks like Ibbott.

Traditional radio powers are already feeling the pain. On Feb. 25, Viacom (VIA ) announced a $10.9 billion write-down in assets at its Infinity Broadcasting division, a clear signal that earnings prospects were dimming. A day later, Clear Channel Communications (CCU ), the nation's largest radio chain, took a $4.9 billion writedown on its radio licenses, although the company says it did so to comply with a new Securities & Exchange Commission requirement to value its businesses.

Whatever the reason, there's no denying a stark reality: Listeners, increasingly bored by the homogeneous programming and ever-more-intrusive advertising on commercial airwaves, are simply tuning out and finding alternatives. Says Rishad Tobaccowala, chief innovation officer at Publicis Groupe Media: "Radio pissed on their own product and then cluttered it up."

The industry tumult comes down to a simple phenomenon. As digital forms of radio proliferate, listeners will enjoy an abundance of new programming -- but much of it still lacks a proven business model. What's more, even tested radio businesses could see ad revenues wither as new rivals snatch away listeners. No one is saying commercial radio is going away: It still draws more than 200 million listeners a week. The industry "is challenged, but not dead," says Laraine Mancini, an analyst at Merrill Lynch & Co. Still, the biggest fear, for old-timers and newcomers alike, is that even as audio programming grows by leaps and bounds, ad dollars will shrink.

For radio to make money, execs must be as innovative with the business model as they are with technology. Satellite is losing money, but its subscription approach is expected to pay off in a couple of years. Now, Net radio players and cellular services are experimenting with subscriptions, too.

It's possible to imagine people paying monthly fees to hear programming-on-demand on the phone, PC, or in the car. Listeners could buy a song they hear on the radio with the click of a button. Companies could sell subscriptions and place ads inside customized traffic information, weather reports, or sports tickers. "This is the tyranny of choice," says Fred Jacobs, founder of radio industry consultant Jacobs Media. "Companies need to rethink the competitive scenarios and take risks."

As old-fashioned radio struggles, listeners are creating the future. In just seven months, podcasts have appeared, covering subjects from Delta blues to vegetarian cooking to consumer gadgets. Podcasting is growing on the backs of two trends in the tech world: the proliferation of blogs -- scores of which are becoming informal radio stations -- and the growing popularity of mp3 players, including, of course, Apple's iPod. Much like television's TiVo (TIVO ), podcasting gives users the chance to listen to their programming whenever and wherever they want it.

Already the forces of commercialization are circling. Entrepreneurs are offering software and services to help podcasters turn out more polished shows. Advertisers such as Volvo (F ) are sponsoring podcasts. And traditional radio stations, such as the British Broadcasting Co. (BBC) and National Public Radio (NPR) station WGBH in Boston, are launching podcasts.

"One of the reasons to do this is because we don't know what it will add up to," says Ruth Seymour, station manager at NPR station KCRW in Santa Monica, which on Mar. 1 began podcasting 22 shows. For now radio stations aren't charging for podcasts, hoping instead to lure more listeners nationally.

If podcasting is for now more of a potential threat to traditional radio, satellite is already drawing blood. While the two players, Sirius and XM, aren't expected to turn a profit until at least 2008, they have lined up high-priced programming talent and are making an aggressive play for the classic car-radio market. But drive-time radio isn't their only goal: They're stepping up marketing of handheld receivers that allow people to record shows and are placing programs on desktop programs such as Microsoft's (MSFT ) Media Player. "Satellite-radio companies are at the beginning of their growth curve," says XM CEO Hugh Panero.

05 March 2005

A north Derbyshire-based radio station is celebrating becoming a major success... in America.

Internet broadcaster radio2XS has just smashed into the US top 20 chart of online rock stations.

The latest monthly survey by US media site Live365.com put the UK alternative webcaster at 19 in "all rock stations" for February 2005.

Although it is broadcast from Dronfield, the number of Americans listening to radio2XS has overtaken the figure in the UK.

The station was founded by former Hallam FM presenter Jeff Cooper, now managing director of Handley Media Ltd.

"It's a matter of access and credibility," he said.

"North Americans have more broadband access and they listen for longer, although the UK is catching up fast. We are now seen as a major shop window for new music in the USA, and, because much of what we play is British, this makes us a great way to get heard over there, even by music industry people.

"Several major US record labels now service us direct, rather than through their London offices, and around half of the demos we receive are from unsigned bands in the US."

Jeff once fell out with his bosses at Hallam FM when he played a track by Sheffield band Pulp, even though they were local and in the charts. The track did not fit in with the station's playlist criteria.

He was later invited back to host the Hillsborough-based, EMAP-owned station's rock show before quitting to set up his own enterprise.

But radio2XS, which broadcasts out of Manor Farm Studios at West Handley, near Dronfield, isn't resting on its laurels.

It opened a new base in Fort Lauderdale, Florida, at the suggestion of a major advertising agency there.

"They approached us because they were big fans of the station and said we were doing it better than the Americans," added Jeff.

"They like our style and wanted a piece of the action.

"We are now looking forward to expanding our base there as they help to spread the word."

Sorry David your personal  political views are showing....I'm talking
about the sound of the station. If KFI was "left wing" it would still
be the best sounding station in LA nothing to do with politics,,,they
do everything the correct way and tied for number #1 in LA. rc

Mike Terry wrote:

So, from this sentence:

"Lacetti Sport features a Blaupunkt single CD player as standard and,
new to this market sector, a DAB digital radio, single CD player as an
option."

you've come to the conclusion that "digital is becoming standard in
cars"?

1.  Chevrolet Lacettis are rare in the UK
2.  DAB is an OPTION, not standard
3.  DAB is not becoming standard in cars

4. You're a knobhead
5. Go away.

>From my experience 99% of car salesmen have never heard of DAB (not
listening to the BBC trails then)

Even when you mail the corporate HQ of some car companies the response is
very poor.

So after 2 years with a Woodstock, I'm back enjoying the better sounds of
Radio 2 on FM & the worse sounds of Radio 5 on AM, but I must say the Saab
AM/FM radio is fantastic for factory fitted kit, pity it doesn't do DAB too.

Really sad news. This from the Times. (I think they got his age wrong, most articles say Tommy was born in July 1943 so he wasn't 63 but 61).

"Tommy Vance, voice of rock, dies at 63

Tommy Vance, 63, the former Radio 1 disc jockey, has died in hospital after suffering a stroke. The DJ, who was best known for hosting the Friday Rock Show on the digital channel VH1, was taken to Darent Valley Hospital, Kent, three days ago after suffering his first stroke at home in Kent.

Jon Roseman, his agent, said that Mr Vance would leave "an enormous void".

"I had known Tommy for 35 years. He certainly had one of the most recognisable voices on radio. He was a great bloke and he was held in very high regard for his knowledge of rock, which was unsurpassed.

"Without Tommy, there will be a hole that is not going to be filled," he said.

Mr Vance's trademark gravely voice landed him many commercial voice-over jobs, earning him the distinction of the "voice on legs".

He started his career in the United States in the 1960s on radio station KHJ, which was based in Los Angeles.

More recently Mr Vance had his own show on digital station Virgin Radio Classic Rock. Television audiences also saw Mr Vance walk out of Gordon Ramsay's Hell's Kitchen on Channel 4 when he could no longer take the heat from the celebrity chef.

During the course of his radio career, which has included stints at Radio Caroline and Radio 1, where he worked for 15 years, Mr Vance interviewed more than 10,000 guests, including the Prince of Wales.

He leaves a former wife, Stella, and two children Jessie, 19, and Daniel, 22.

Andy Parfitt, Controller of Radio 1, said: "Tommy Vance was a great broadcaster. He presented for many years on Radio 1 the seminal rock show, which a whole generation of music fans remember very fondly.

"He will be sadly missed by listeners and fellow DJs alike."

Dave Cash, a fellow DJ, who was a friend of Mr Vance for 40 years, told the BBC: "He's a bit like John Peel and Kenny Everett - he's irreplaceable, he was a total - professional. Tommy was part of the group that actually cared about the music he was playing."

(The Times)

It is very stale and old-fashioned sounding. They've been using Ratt
for the News Sounder for what, five years now? There news sucks; all
Michale Jackson and Robert Blake. Their Drive Time is wall to wall
commercials, except for the ranting about the Mexicans. It's awful.

I think the best technical air sound is on 1260.

The talk about volatility of sat radio stock prices it a bit
broad-brushed.

If you bought XM exactly five years ago - when they were still a
glimmer in the eyes, Every dollar you invested would be worth would be
worth about 75 cents today - not horrible for an extremely

speculatative stock.

OTOH, every dollar you invested in Sirius exactly 5 years ago would be worth 5 cents today!!  In other words, Sirius hugely diluted their stock to avoid bankruptcy.

XM has also been issuing stock to keep up their momentum - but not to anywhere near the extent of Sirius.

Both companies are still at the stage where they are "buying customers".

By comparison, every dollar invested in General Electric exactly five years ago is worth about 75 cents today (about the same as XM) - and GE is a "solid" company.

WMAL - Washington, DC - for the M A Lease Optical Company  They sold the station to NBC in the 1930s, but the call persists to this day.

The US House of Representatives in America more than interestingly passed a bill on Wednesday which will certainly make broadcasters in America take note.

The bill, if approved by the Senate and then the President, will impose unprecedented fines on those broadcasting material that could be described as indecent.

The bill has been criticised as stifling free speech.

But the supporters of it are saying that stiff fines are needed to give deep-pocketed broadcasters more incentive to clean up their programmes and to help assure parents that their children won't be exposed to inappropriate material.

The measure was passed 389 to 98.

Perhaps that's why we haven't read about it.

The maximum fine will rise from 32,500 dollars to half a million for a company, and from 11,000 to half a million for an individual broadcaster.

The Republican from Texas who sent the bill to the house said "This is a penalty that makes broadcasters sit up and take notice ... this legislation makes great strides in making it safe for families to come back into their living room."

The White House said it strongly supported the legislation that "will make broadcast television and radio more suitable for family viewing".

Now the Senate is considering a similar bill.

It's said that when the differences are worked out, it will all go to President Bush for signature.

Opponents of the legislation say that they are unclear about the definition of "indecent".

Mention was made of Saving Private Ryan, the World War II drama, which several ABC affiliates in America last year did not air because of worries that violence and profanity would lead to fines.

I should say there are already mechanisms in America to fine people for a breach of broadcasting standards.

The Federal Communications Commission already has wide latitude to impose fines.

It can fine an individual company, a group of stations, an individual broadcaster.

Apparently last year fines totalled over 7 million dollars.

But all five members of the Federal Communications Commission, three Republicans and two Democrats, are in favour of greatly increasing the fines.

And this legislation allows the Commission to fine someone like, for example, a disc jockey, without first issuing a warning.

Now I'm sure there are many Australians who feel that we've got something to learn from this legislation.

Already under American law radio stations and television channels can't air obscene material at any time.

And can't air indecent material between 6am and 10pm.

The Senate bill varies from the House of Representatives bill by seeking to raise the maximum fine on broadcasters to 325,000 dollars with a cap of 3 million dollars a day.

Now people watching/listening to us often wonder how violence in
language and action, physical, verbal and sexual, can parade at any
time as entertainment.

And certainly is allowed under the umbrella of free speech.

The legislation seems to be telling people like us to tidy up our act.

Many who watch television and listen to radio would argue that the call
is long overdue.

Alan Jones

Sirius, with only about one-tenth as many terrestrial repeaters as XM,
is less likely to work within steel/concrete buildings.  With Sirius's

ever-moving sats, the "good" indoor places will move around during the day. Be prepared to find different good spots for different times of the day.  They should repeat every day, however, since the Sirius satellite positions are on an 8-hour repetition..

There are some that I came upon:
WGY 810 kHz, Schenectady, NY   "G" for General Electric, "Y" last letter in Schenectady.
KGO 810 kHz, San Francisco, CA  "G" for GE, "O" last letter in San Francisco. GE owned both stations many years ago.
WROW 590 kHz, Albany, NY "Row!" (like a dog growling) "Watchdog of the Capital District".
WPTR 1540 kHz, Albany, NY (back in the 1960s), Patroon Broadcasting Corp.
WROV 1240 kHz, Roanoke, VA (back before 1990s) "RO" for Roanoke, "V" for Virginia.
WSLS 610 kHz, Roanoke, VA (Before 1980), Shenandoah Life (insurance) Station
WQBA 1140 kHz, Miami, FL (Spanish speaking)  Q, pronounced "coo", BA as in "bah". Said together, it is "Cuba" as said in Spanish.

Sorry, but I stumbled across this thread and just added a couple calls that I knew about.  I'm disabled now, but I was a radio and TV broadcast engineer in the '70s, '80s and '90s

As far as someone creating a website, I like the idea.  Btw, WSM in Nashville claims it means "We Shield Millions" because it was started by an insurance company.

A local Christian TV station bought an existing low power station in

Lake county Florida.  The call letters were WIYE so they cam up with "We Inspire You Everyday"  Later, they went full power and changed their call to WACX for "ACTS TV" because it was as close as they could get to what they wanted.

My first job in radio was at the 980 Khz AFRN station at Ft Greely, AK in '73 and '74.  It was 95 percent tube equipment and had a really worn out Gates BC250 transmitter that was patched together by countless emergency repairs that were never done right.  The studio was a real dump, and over the years someone had put layer after layer of house paint on the audio board and some of the other equipment.  It was a case study in how not to do radio or TV.

We also had a 500 watt B&W TV station on Ch 8 that was a joke. A lot of equipment failures that put it off the air every night and the typical military attitude of not letting yo fix a problem, and not allowing any downtime.  Those were the days! :)

>WSLS 610 kHz, Roanoke, VA (Before 1980), Shenandoah Life (insurance) Station

For future historical reference with these two:

The WROV calls landed on 96.3 Martinsville, VA, which inherited 1240's history as "The Rock of Virginia" for the Roanoke/Lynchburg market. 1240 is now WGMN ("The Game", sports), simulcast with Lynchburg's WVGM/1320.

The WSLS calls are still on TV channel 10, the R/L market's NBC affiliate. 610 eventually became WSLC, for decades the area's dominant country station. The format and WSLC calls migrated to FM 94.9, where it exists today as "Star Country". For a time, WSLC/610 simulcasted the new FM country signal, and is now WVBE(AM)... the AM and Roanoke simulcast of Lynchburg-targetted urban FM station "Vibe 100" (WVBE[FM] 100.1).

That station was once WLYK ("Lynchburg's K", I presume), and IT used to simulcast Roanoke top 40 WXLK/92.3 before breaking out on its own with the new format in 2001.

WEAF (later WNBC, WRCA and WFAN) was next in sequence after the call letters that the FCC originally offered and the owners rejected - WDAM.

WEVD (now WEPN) stood for Eugene V. Debs, the labor union leader who helped found the Socialist Party and was jailed for criticizing World War I.

WCFL (I'm not sure what that is now) was Chicago Federation of Labor

WLS (then owned by Sears) was the World's Largest Store

KYW doesn't stand for anything but it has an interesting migratory history, having originated in Chicago, then Philadelphia, Cleveland and back to Philadelphia.

WJZ is another call associated with AT&T and Westinghouse which has done some migration. Originally the NBC Blue Network (later ABC) call in New York, it is now the call for the Westinghouse (later CBS) TV station in Baltimore.

I don't think you can actually buy a call from one station to use on another station but Ted Turner bribed the MIT student radio station WTBS (Technology Broadcasting System) to change its call to WMBR so that the call WTBS would become available to his TV station.

Also, are there any sets of calls in which the AM/FM and TV stations are hundreds of miles apart other than for KCBS?

KCBS is in San Francisco. KCBS-TV (originally KNXT, from KNX for the Los Angeles Evening Express) and KCBS-TV are in Los Angeles.

The WCFL refered to above is now WMVP and is owned by ABC and is
ESPN Radio
> WLS (then owned by Sears) was the World's Largest Store
>
Also in Chicago, there is WMBI, Moody Bible Institute
WGN which stands for Worlds Greatest Newspaper  (Chicago Tribune)
WIND does not stand for Windy City, but stands for Indiana where it was
first licensed.
Downstate in Champaign-Urbana, IL there is WILL which is licensed to the
University of Illinois and stands for Illinois.

In South Bend Indiana WSBT stands for South Bend Tribune and
WNDU (now only TV) stands for Notre Dame University who owns it
through a commercial subsidiary.

There is an AM & FM in Michigan that are about 175 miles apart.
WKLZ-AM, Kalamazoo and WKLZ-FM, Petosky.  They are not commonly owned.

Early call letters and their meanings can be found at the top of the
page at Jeff Miller's Broadcasting History site at
http://members.aol.com/jeff560/jeff.html

First, an answer to that last question.  I've got one here in Utah.

KJZZ TV 14.  Larry Miller, owner of the Utah Jazz, got permission from Rio Solado Community College to use KJZZ for the TV station.  The calls were first seen in 1980 in Phoenix.  KMCR 91.5 (Maricopa College Radio) first used them.

And here's a stack more...

KBAQ 89.5 (soon moving to 89.1 in frequency swap with EMF) Phoenix. K-Bach.  Classical station.  Oddly, they originally were assigned 'KBQA' when someone forgot to request calls within a certain amount of time back in 1992.

EMF '*LV', 'LV*', and L*V' calls.  Loads of these, all for 'Love' as in K-Love.  See the whole list for yourself at klove.com.  Their sister network, Air1, uses 'RI' for that name in some of their calls.  But the most interesting of these is KAER 89.3 Saint George Utah.  Yes, there is also a 'KLOV' in Winchester, OR, used to feed their translators.

University calls.  Plenty abound, loads of other examples, but here's one not obvious to some.  KBYU Provo (kbyufm.org) is obvious, but did you know they were KBRG originally for 'Brigham' because KBYU was a ship call.  KSL was once assigned KZN but that was because of the same reason.

I was responsible for the KXCI calls in Tucson.  XCI stands for 91 in roman numerals.  Station is now on 91.3 but once was on 91.7.  More info may still be on kxci.org

Othere.

KUUU 'U-92'.  More for identity.
KRAR  'Rock and roll', hard rock station in Utah in late 90s.  Left the air as rock station in an expletive filled hour in late 90s, became 50s oldies until CC got it and ran KOSY 'Cozy' on it before selling it last year.
KHTB 'Hot 94.9, the Blaze'  'Hot 94.9 was dropped two months later.
KMDG 'Mad Dog' active rock station.
KDUT 'La Gran D' (the Big D) Utah.
KZZA.  Opened last night with 'Hurban' format in Dallas.  They got 'Casa' (Spanish for house) out of that one.  Was KKDL up until last night.
WEAK-LP.  Obvious.  LPFMs run with weak power, 100 watts at 100 feet HAAT.
KRIM-LP  'Rim' as in Mogollon Rim in Arizona.  Natural landmark related.
KNRJ 'Energy'  Dance format.  energyarizonafm.com.

Various 'Edge' nicknames.  KEDG, KEDJ, etc.  Common alternative format
name and identity in calls.
Salt Lake's 'zoo', all stations owned by Citadel.
KUBL 93.3 K-Bull, country
KBEE 98.7 'B98.7 or 'Bee 98.7'.  Based on honeybee/beehive in state
seal.
KBER 101.1 Chris Devine of 3 Point Media came up with this in the 80s.
Bear.
KKAT 860 (earlier 101.9).  Cat.  'Kat Country.
and they have 'pop' now, KPQP, 'Pop-FM'.
Two 'Oasis's.  KOAI Dallas, KOAS Dolan Springs/Las Vegas.  Both smooth
jazz formats.
'Vegas'.  KVGS, KVEG.  Both rimshotters, neither is in Las Vegas
itself.
'Luck' or other similar gambling-related stuff.  KLUC, KLUK, KWNR.
KSOS.  'Sounds of the Spirit' (old KILA)  on 800 (defunct) in Brigham
City. Might have stood for 'S*** on a shingle' but it's not known if
the original owner that took the calls ever meant that anyway, although
its signal reached a nearby military base.
KMTI 'Manti, Utah'.  The town name comes from a location mentioned in
'The Book of Mormon, Another Testament of Jesus Christ'.
KVVA 'Viva' 107.1 Apache Junction/Phoenix.  Spanish word.
KUTR  'Utah'.  Two stations had it in the late 80s, early 9os, will
soon be heard again this spring when Bonneville puts 820 on the air in
Salt Lake.
KLGN 'Logan Utah'.
KVNU 'Voice of Northern Utah', station in Logan, Utah.
KEVA short for 'Evanston' Wyoming.
KUDD I doubt had anything to do with the Simpsons episode that parodied
KOME in the Bay Area.  KOME had a liner that said 'Don't touch that
dial, it's got KOME all over it'.  The Simpsons episode had 'KUDD', may
have been a reference to cow cuds.  The KUDD calls are in Roy, Utah on
107.9 (docket 04-427 proposes move to Henefer Utah), and the D's stood
originally for 'Dianna' and 'Power D'.  Station still uses Power 107.9
but has segued from CHR/Pop to hot AC lately.
KKFR 92.3 Glendale/Phoenix.  K-Fire.  Used for short time in mid-80s.
Now another 'Power', as a rhythmic CHR.

I'll post more later.  Keep all the stories coming.

Yep: for one example, WWVA-AM in Wheeling, West Virginia: WWVA-FM in an Atlanta suburb.  There are other examples.

But to the best of my knowledge, KCBS was the *first* station to "split" their calls like that.

No, don't be! I was just curious, because we have this discussion once every year or two. In fact, I'll add some...

>    A local Christian TV station bought an existing low power station in
> Lake county Florida.  The call letters were WIYE so they cam up with "We
> Inspire You Everyday"  Later, they went full power and changed their
> call to WACX for "ACTS TV" because it was as close as they could get to
> what they wanted.

WSVN Channel 7 Miami, Florida. WSYX Channel 6 Columbus, Ohio. WTHR Channel 13, Indianapolis, Indiana. WFOR Channel 4 Miami. And WFOR used to be WCIX Channel 6...

WEWS-TV 5 Cleveland, Ohio, owned by Scripps-Howard and one of the first TV stations in the country. Callsign stands for "Edward W. Scripps."

WOIO Channel 19 Cleveland. I've never asked but I always assume the calls stand for "Ohio."

WXIX Channel 19 Cincinnati, Ohio. XIX is the Roman numeral 19.

WIII Channel 64 Cincinnati. "The Eyes of Cincinnati." (Eyes... I's... heh... someone had a rather cheesy sense of humor.)

W-One and W-Two: WONE-AM 980 Dayton, Ohio and WONE-FM 97.5 Akron, Ohio, and WTUE-104.7 Dayton. All used to be owned by Summit Broadcasting. Clear Channel now owns the Dayton stations and a local broadcaster, Rubber City Radio, owns WONE-FM in Akron.

WLQT 99.9 Dayton used to be WVUD, broadcasting from Kennedy Union at the University of Dayton. WVUD was the "Voice of UD" and was licensed to the university until 1993 when the station was sold to Clear Channel.

Incidentally - I didn't realize this until doing a Google search, but the University of Dayton campus radio station (where I used to do an airshift that you could almost hear in the dorms if you were lucky) has hit the airwaves. WDCR used to be carrier-current only. Now they're WUDR-99.5/98.1... "The Udder". (no, I'm not kidding, see for yourself: http://flyer-radio.udayton.edu/)

WEOL-AM 930, Lorain County, Ohio, serving Elyria, Oberlin and Lorain.
WELW-AM 1330, Lake County, Ohio, serving Eastlake and Willoughby.

There was a Christian radio station on 1260 for a while in Cleveland, with the calls WRDZ ("Words"). (It's now Radio Disney.)

How about WZAK-93.1 Cleveland, currently owned by Radio One but previously the flagship station for Cleveland-owned Zapis Communications.

And WJW-TV 8 Cleveland, which became WJKW for a number of years in the 80s after it was sold to a different company from the one that owned WJW-AM 850, and then became WJW again after WJW-AM was sold and changed calls. Not notable, except that they were allowed to go back to three-letter calls. I'm not sure how that happened, or if a lot of strings had to be pulled to make it happen.

In the area where I now live, KHWY 98.9 Essex, CA. Part of the "Highway Radio" group of stations catering to people driving the highways between SoCal and Laughlin, NV, and SoCal and Las Vegas. (KHWY is on the way to Laughlin.)

I'm sure I'll come up with some more later...

February 16, 2005

Hams have historically been tinkers. We have developed many of the communication technologies seen in use today.
While many think of amateur radio as a hobby that involves people who tinker with tubes, oscillator coils and transformers; I am left wondering what will happen in the next 40 - 50 years for Amateur Radio.

Will it be "radio" as we know it today or will we evolve into a new communications evolution?

So what may be in the future for ham radio?

For example, will tomorrow's hams communicate long distances by bouncing modulated light waves from the sun using large dish reflectors into the deep fringes of space?

Will we find a way to learn to harness the light and gigawatt power of the sun to achieve this powerful communication network in the future if it should even exist?

Perhaps we may use a form of earth vibration modulation technology using Mother Nature as a new communication medium.

Or, we might find a way to communicate using atoms as the vehicle for communications in the future.

Will we be able to use atoms to send signals by compressing packets somehow into these atoms and then sending them over long distances along a narrow beam of light?

Who knows?

As we evolve into the future of Amateur Radio what do you think we will invent? Will the ARRL have new interplanetary DX entities? How do you envision the typical Radio Amateur in 2050?

>From DRDB:

Using iVOX technology DAB digital radios can tells listeners station names, the time, and alarm settings. It can even talk users through setting alarms or presets. iVOX speaks with a real human voice, not robotic synthesized speech, and is highly configurable with an option of male or female voice. iVOX users simply turn off what speech they don't need using the easy-to-change iVOX settings.

iVOX features in PURE's SONUS-1XT which debuts exclusively at the Bristol Sound and Vision Show 2005. The show runs from February 25-27 at the Bristol City Marriott.

Says Kevin Dale, president, PURE Digital: "iVOX adds an extra dimension to the way we interact with DAB radios. As well as a being a terrific benefit for the sleepy alarm-user who doesn't want to raise their head, or find their glasses, iVOX is of enormous use to partially sighted or blind radio listeners. iVOX's multiple levels of configuration mean that each user can have precisely the amount of iVOX of most use to them."

For example, at a low iVOX setting on SONUS-1XT a single tap on the patented SnoozeHandle(tm) and SONUS-1XT will tell users the time. To check alarm settings users simply tap the SnoozeHandle twice to have them spoken. At higher levels iVOX will name the available DAB stations as listeners scroll through them, and even talk through all aspects of setting up the radio.

For retailers iVOX enables SONUS-1XT's demo mode - which introduces shoppers to the benefits of the product.

SONUS-1XT is expected to be available on the high street at around �119.99 (inc. VAT). See www.pure.com for stockists or call 01923 277 488.

Fewer people will communicate on ham on Earth. However, you can communicate with UFO in space. We will find life on other planets or stars to talk with.

For one thing, spread spectrum methods are going to totally change the way
we think about frequency allocations, and some bands are probably going to
have to be set aside for spread spectrum use.

But by 2050, I expect that the main issue for amateur radio will be whether
code will be required for licenses or not....

A few from my previous stomping grounds, Northeastern Oklahoma/Northwest Arkansas.

KRMG (AM 740) - Originally owned by Kerr McGee oil company
KVOO (now KFAQ 1170AM) - stood for Voice Of Oklahoma - I believe these calls are now parked on the sister FM at 98.5.
KMOD - acronym for Middle Of the Dial (97.5FM)
KELI (used to be AM1430) - if memory serves, Kelly was the name of the original owners' daughter.
KXOJ (100.9 FM) - Christian easy listening station - ironically, the calls stood for eXcited Over Jesus.
KCFO (AM 970) - Christian talk station, the calls stand for Christ For Oklahoma - originally these calls were parked at 98.5FM as "Love 98".

KXUA (88.3 FM) - University of Arkansas
KUAF (91.3 FM) - University of Arkansas at Fayetteville

KAMO (94.3 FM) - The story I was told was that when the station signed on in the late 60's, it was the only FM in the region that could be heard in all four of the following states - Kansas, Arkansas, Missouri and Oklahoma.

KBVA (106.5 FM) - Licensed to Bella Vista, Arkansas.

KURM (AM 790) - I've actually met the original owner, and his first name was/is Kermit.

By Doug Johnson
American Mosaic, in VOA Special English.

Our listener question this week is from Nigeria. Prince Onyebuchi in Aba Abia State notes that February twenty-fourth was the sixty-third anniversary of VOA. He asks about the history.

The United States government established the Voice of America during World War Two. The first radio broadcast was in a language no longer heard on VOA. It was a fifteen-minute program in German. It aired on February twenty-fourth, nineteen forty-two. It told the German people that every day, VOA would broadcast news of America and the war. The announcer said The news may be good or bad, but we will tell you the truth.

Today, VOA broadcasts more than one thousand hours of radio programs each week in forty-four languages. VOA also has television programs in English and a number of other languages. These include Albanian, Cantonese, French, Indonesian, Mandarin and Persian. And VOA uses more than fourteen thousand computer servers around the world to put information on the Internet.

VOA has three main duties under a Charter signed into law in nineteen seventy-six. One is to report the news fairly. Another is to tell about America and its people. The third duty is to present the policies of the government as well as opinions about those policies.

When VOA began, all broadcasts were on shortwave. Today many local radio stations around the world carry VOA programs. It is estimated that VOA reaches more than one hundred million people each week through radio, television and the Internet.

More than ten million individuals visited the VOA Web site last year. We are happy to report that Special English is the third most popular page after the VOA home page and standard English.

Visitors can get to us from the English learning link at voanews-dot-com. Some VOA language services also link to our site. Or visitors can go directly to voaspecialenglish-dot-com.

WCBS AM radio was originally licensed to Springfield Illinois but when the CBS radio network was formed, a deal was made to change the call letters in Springfield so New York could get WCBS. The Springfield calls were changed to WCVS and until the 1980's the station logo included an asterisk over the V and a small print addition at the bottom to say 'formerly WCBS'.

WTMC in Ocala Florida, the first radio station there, stood for Welcome To Marion County. Calls were changed in the nineties.

WXCV FM in Crystal River, Florida calls were invented by one of the owners. Because the station was at 95 on the FM dial, roman numberals were used for 95. XC=90 V=5

WHBO AM in Tampa Bay was designed to spell out Hillsborough, the county of license.

WAFC in Clewiston Florida was picked by one of the founders from the AFC switch (automatic freq control??) located on the front panel of the GE Super Radio unit.

WSMD (long since gone) in Chicago was a jazz station that supposedly stood for Smack Dab in the Middle as they were in the middle of the FM dial (exact freq I dont recall, but around 98)

WRVA 1140 in Richmond VA shares those calls with an FM in Raleigh NC on 100.7.  I think they're both CC properties.

WERO 93.3 in Washington NC had flipped to WBOB (they call themselves Bob933) but flipped back to the former when the FCC folks realized there was already a WBOB in Florence KY that had not been consulted about it.

Also in NC, there is a WANG AM-FM in Havelock NC, and years ago the 1250 signal out of Farmville NC was assigned WFAG.

Cleveland stations:

WNCX -- "North Coast"
WCLV -- "Cleveland"
WUAB -- "United Artists Broadcasting"
WKBF -- "Kaiser Broadcasting" (looong defunct)

others, that I'd have to think on -- I haven't lived in Cleveland in
15 years.

Barry Crimmins, activist and comedy writer from Air America Radio, and Randy Credico, political activist, comedian, and WBAI personality bring you the best comedians and political comedy writers every Tuesday night. They rant at the current political scene, doing material that will never make it to the airwaves as we know them. Depending on which artists and writers appear on any given night echoes of Woody Guthrie, Lord Buckley and Lenny Bruce may be heard in the house.

http://www.barrycrimmins.com/index.php?page=home

8PM Tuesday nights at
Rocky Sullivan's Bar
129 Lexington Ave @ 28th street.
Manhattan

(One block east of the 28th st. Lexington Ave local subway stop.)

Most nights the hat is passed.

I'm compiling a database of Internet radio shows and stations as well
as other recorded programs available for listening on demand, such as
Earth & Sky, Living on Earth, and Prague Radio.

http://www.deltafarms.com/nicu/shell.php3?request=radios

If you have any shows, stations, or other recordings on-line to offer,
please share them with us.

Shyeeizzit. By 2010 they'll remove the requirement to supply licensee's
first and last name, saying it's too difficult to remember all that and
it has no bearing on one's ability to work a PTT switch.

For sale:

(The "Radio Crazy" is baaaakkkkk!!!) Hi!

Partial interest in LPTV CP for a nice, famous and wealthy Delaware beach resort city. You'll know it the moment I mention it unless you were "born yesterday" Hi!

This is a joint venture. Accordingly these is an element of risk. You could lose all or part of your investment. That is not likely but the law makes me say this!

Active or inactive investors with at least $10,000 each are welcome. All investors would be investing! (Duh!)

This is a UHF LPTV with well over 10,000 watts ERP. It will be the first local TV in the area.

Please call (478)741-1710 in Macon, GA anytime at all!

Please, no "tirekickers", "Toys-R-Us" age group, convicted felons or non-citizens. The FCC doesn't like you and nor do I! If you were fined $4.95 for smoking "pot", don't reply. The FCC hates you too!

References:

a-My parole officer. Mr. Larson E. Rapp, c/o Zing-Zong prision, Ossingstink, NY. Tel: 1-800-IMA-THUG.

b-Trade reference: Brazilian Bandit Airways, Ohskosh Regional Airport, Oshkosh, WI. (Pilots will see the irony). Purchased a one-way ticket to Rio using all small and unmarked bills. Don't worry, your funds will not be deposited into my secret Swiss bank account until I am safely in Rio!

c-Personal reference: Mr. Yura Crook, c/o Arizona Oceanfront Condos, Phoeniz, AZ 12345-6789. Mr. Crook has been selling Arizona Waterfront property for years. When the warden answers, please ask for 34590302322, cell block 73-88.

The references are in jest, the deal is very real!

73,

Meyer Gottesman, W6GIV
aka "Radio Crazy".

Steve Sobol <sjsobol@JustThe.net> had written:
|
| No, don't be! I was just curious, because we have this discussion once every
| year or two. In fact, I'll add some...

Yes, it's a waste of time, but it's a *fun* waste of time!

So here goes:

San Francisco area:
KSFO - from the airport abbreviation (KSFO)
KNBR - from previous ownership by NBC (presumably NB(C) Radio)
KCBS - from current (sort-of) ownership
KCBC - actually in the Modesto market, owned by Crawford Broadcasting Company (CBC)
KGO -- supposedly, "General (Electric) Oakland", from its original owner and city of license (also on KGO-TV)
KABL - was at 960 kHz, now exiled to a suburban East Bay FM signal, meant to evoke the "cable" cars, complete with cable-car bells!
KIQI - originally KIOI, after its dial position at 1010 kHz.
Similarly, KIOI(FM) is at 101.3, but Clear Channel trashed the
longtime "K-101" moniker for the cookie-cutter "Star 101-3"
KTCT - "The Ticket" but now often simulcasts KNBR
KFAX - an early 1960s effort at an all-news station, it has kept the calls (K-Facts) long after that format expired
KLOK - San Jose, once called "Radio Reloj", but had those calls as an English-language station, too
KOIT (AM/FM) - after the Coit Tower, a San Francisco landmark
KSRO - Santa Rosa, for, well, Santa Rosa (SRO)
KVTO - "Voice of the Orient", a Berkeley brokered station with programs in many Asian languages
KEST - presumably "East", a San Francisco brokered station similar to KVTO

KQED (FM/TV) - "QED", Latin for "that which was to be proved", the
tagline of many a mathematical proof
KPOO - "Poor People's Radio", a San Francisco noncommercial FM
KFJC - "Foothill (Junior?) College", a South Bay station
KUSF - University of San Francisco
KCSM (FM/TV) - College of San Mateo
KSJO - San Jose, for the city, (or now that it is "La Preciosa", has it changed calls?)
KNGY - Alameda, "Energy" (dance format)
KPFA - *The* original Pacifica station
KYLD - "Wild" (urban format)
KZBR - "The Bear" (country format)
KLLC - "Alice" (20-something format)
KISC - "Kiss" (R&B oldies format)
KFOG - After the fog in San Francisco
KITS - "Hits", remnant of a long-gone Top 20 format
KSAN - historically for "San" Francisco, but now on a station licensed to San Mateo, so I guess it still works
KVYN - "Vine", an FM station in Napa

KRON - "Chronicle", the newspaper that was the original owner of the TV station
KTSF - Television San Francisco
KMTP - Minority Telecommunications Project, the owner of the station
KBHK - HK for "Henry Kaiser", the industrialist who put the station on the air
KFTY - Santa Rosa, for its dial position on channel 50
KTLN - Novato, for "Total Living Network"

A little farther afield:
KVEC - San Luis Obispo, for the Valley Electric Company (original owner)
KPRL - Paso Robles, for Paso Robles

Even farther afield over to Missouri and nearby:

KCSP - Kansas City, "Kansas City Sports", originally was WDAF, the calls now are on FM
KCMO - Kansas City, Missouri (AM or FM)
KCTV - Kansas City TV, originally KCMO-TV. The calls were chosen in 1982 after Meredith spun off the radio stations and persuaded a San Angelo, Texas TV station to give up its KCTV calls
KMBC - "Midland Broadcast Central", now just on TV but originally on AM
KMBZ - Smart move by Bonneville when it bought KMBC(AM) in 1967
KCKN - Owned for many years by the "Kansas City Kansan" newspaper
KCNW - "Kansas City News", remnant of a brief period as an all-news station affiliated with the NBC News and Information Service
KSFT - "Soft", a St. Joseph station originally on FM, its original calls, KKJO were swapped with that FM station in the late 1980s when the KKJO rock format moved to FM

And, no, WHB did not originally stand for the "World's Happiest Broadcasters". That slogan was retrofitted to the calls more than 30 years after WHB first took to the air.

KCUR - "Kansas City University Radio", an FM station originally put on the air by the University of Kansas City, which is now a part of the University of Missouri
KJHK - "Jayhawk", a student-run station at the University of Kansas
KMXV - "Mix", a CHR station
KUDL - "Cuddle", a soft-rock station, but that the calls originally were on an AM Top 40 station (now KCNW)
KCFX - "The Fox"
KBEQ - A length explanation: originally KBEY-FM, sister station of KBEA(AM), which was put on the air by real estate developer Thomas Beal (BEAl)

KSHB - "Scripps Howard Broadcasting", the second owner for which channel 41 was named. The first was KBMA for the Business Men's Assurance insurance company.
KQTV - The St. Joseph station was originally KFEQ-TV, when it split from KFEQ radio, the "Q" remained

KTPK - For Topeka

KLWN - For Lawrence
KLZR - "Lazer", a Lawrence FM station
KANU - "Kansas U(niversity)"

Elsewhere in Missouri:

KTVO - A TV station licensed to Kirksville, Mo. but which, for many years, had its main studio and offices in Ottumwa, Iowa
KRCG - Richard C. Goshorn, the published the of the Jefferson City newspaper that established the TV station
KMIZ - "Mizzou", after the University of Missouri in Columbia
KHQA - "Hannibal-Quincy", a TV station licensed to Hannibal, Mo. but based in Quincy, Illinois
KOLR - "Color", a Springfield, Mo. TV station

KBIA - "Columbia", now the calls for the University of Missouri's NPR station, originally the calls for a commercial AM station
KCOU - "COU", the airport abbreviation for Columbia, another university station
KOPN - "Open", a Columbia station originally founded as an open-access volunteer operation
KTGR - "Tiger", the mascot of the University of Missouri (original calls, KBIA!)
KWOS - "Keep Watching Our State", a Jefferson City station named in commemoration of state-owned station WOS ("Watching Our State") which had its plug pulled in 1936 under mysterious circumstances

The whole K[letter]MO series:
KFMO Flat River
KGMO Cape Girardeau
KHMO Hannibal
KJMO Jefferson City
KMMO Marshall
KSMO Salem -- and *also* KSMO-TV Kansas City (for "Kansas/Missouri")

And the "Keep Tuned To" series:
KTTN Trenton
KTTR Rolla
KTTS Springfield

KWTO Springfield - "Keep Watching the Ozarks" (a radio station, never a TV station)

A few from Iowa:

KCOG Centerville - "Keep Calling of God", because it used paid religious programs to stay afloat during its early days
KOTM Ottumwa - OTM for Ottumwa
KRNT Des Moines - "RNT", the Register and Tribune, the station's former longtime owner
WSUI and KSUI Iowa City - SUI for "State University of Iowa", the

old name for the University of Iowa
KMA Shenandoah - "MA" for Earl May, the nurseryman who put the station on the air

OK, that's enough for now!

With the average household having 14 Cards, its no wonder that Card card balance elimination is a big concern for most families.

For the rest of the story about destroying debt, visit us here
http://ebi.7.yourmodifieditems.com/e3/

Bankruptcy laws have changed.  Many former bankruptcy attorneys have gone on to other legal arenas. This is not about bankruptcy. This has nothing to do with "debt counseling" or reduction in your payment plans! Not about consolidation or management of your card debts. This is about not making payments right away and making them pay for lying to you. Learn how the banks really work and how the entire money system has been rigged.  You�ll be surprised and maybe a little upset! But we�ll help you turn it to your advantage with easy to follow steps.

sorry not for me and the address is above

But you needn't worry about me. I haven't been experimenting with electricity all this time for nothing, I can tell you
As for my health, I'm as well and strong as any boy need be, and there's nothing wrong with my head, either.

I was anticipating that exact sentiment to be expressed here. If and when it becomes economically prohibitive for powerhouse networks to broadcast over the airwaves due to all the lord high advertising revenue going satellite, it will only open the way WIDE OPEN for a group of "rebels" to make use of good old fashioned radio. As a matter of fact, if you have just five cents worth of socio-psychology, you'd understand full well that there would be a huge group of people that would turn from the main stream and tune into the new age "underground" culture that uses good old fashioned radio waves to bring their message, music, media etc free of the oppressive commercial laden satellite jerk-offs.

Bank on it.... If and when satellite does away with radio, radio will become free, and unencumbered by mass-media money grubbing pigs, and thus, attract the masses again until it becomes commercialized again.

In short... Radio wont die... Just evolve... At the very worst, it will indeed even become way more interesting then it is now.

Michael

A community radio station is inviting people to a talk from a local radio expert.

Brian Lister, who has worked for Alpha FM, Sun FM, TFM, Metro Radio and the BBC, will give a talk to members of Radio Teesdale this month.

Mr Lister is advising a number of commercial and community radio stations and will be talking about the future of community radio and how it will affect everyone in the UK.

Peter Dixon, of Radio Teesdale, said: "We are delighted that Brian has found time from his busy schedule to visit our studio and talk to us.

"If you have any sort of interest in broadcasting, whether or not you are looking to become involved in the future activities of Radio Teesdale, I would urge you to join us for an interesting evening with one of the top radio professionals working in the UK today.

"Over the coming months, we are planning on organising a number of meetings and training sessions that will be open to the community of Teesdale."

Although the station is currently not broadcasting, it is preparing for its next broadcast, likely to be in the autumn.
It is also awaiting the outcome of an application to Ofcom for a full-time licence.

The talk by Mr Lister is on Monday, from 6pm to 8pm, at Enterprise House, Harmire Road, Barnard Castle.

Discuss Communications on the Politics.i.e. Forum

More news from Communications

Sean�n writes "Sean�n � Coist�n, the independent republican candidate for Kildare North, welcomes the decision of the Broadcasting Commission of Ireland to licence more radio stations but feels it is very late and new station will find it difficult to break the current monopolies of existing stations. He also rejects the notion that the radio market is saturated.

As part of his election policy platform, Mr. � Coist�n wants to see more radio stations licensed as the current situation is unfair. Most counties have only one local independent radio station whereas Dublin has eight radio stations. Even though county Kildare is the fastest growing area in Ireland, it still only has one radio station, KFM. Mr. � Coist�n believes this does not give listeners much choice and is against competition rules.

"While I welcome the decision to licence more stations, it should have happened a decade ago. I want to see many local stations offering many different programming styles so that listeners have as much choice of radio as possible. There is plenty of room on the bandwidth to allow new stations to broadcast."

All the details of Mr. � Coist�n's proposals are found on his website www.ocoistin.ie

He has experience of radio presentation on Dublin and Limerick radio stations.

I forgot about those. Actually, WNCX = "North Coast eXpress to Rock and Roll"
and that's how they ID'd themselves when they signed on in 1987.

> WUAB -- "United Artists Broadcasting"
> WKBF -- "Kaiser Broadcasting" (looong defunct)

These, I didn't know about.

> others, that I'd have to think on -- I haven't lived in Cleveland in
> 15 years.

Lessee, there are a couple more. KKJZ Long Beach, California - "K-Jazz",
simulcasting on KUOR Redlands, owned by the University of Redlands. KKJZ is
licensed to Cal State, Long Beach, IIRC.

Apropos of WCLV, Los Angeles's classical station is KMZT 105.1, "K-Mozart."

Los Angeles also has Kiss 102.7 (KIIS) and "Coast" 103.5 (KOST).

Washington, DC
February 26, 2005

Russian-language programs of Radio Free Europe/Radio Liberty (RFE/RL) will be broadcast 18 hours daily on Radio Baltika, a local UKV ("Eastern-Band FM," 66 to 74 MHz) station in St. Petersburg, Russia, beginning March 1, 2005.

The unprecedented availability of U.S.-sponsored radio programming in Russia's second-largest media market comes as the result of an agreement signed today in St. Petersburg by D. Jeffrey Hirschberg, a member of the U.S. Broadcasting Board of Governors, and by Oleg Rudnov, founder and general director of Radio Baltika. The agreement is part of RFE/RL's effort to expand audiences in Russia through a revamped national schedule that includes new live and interactive programming and improved local distribution.

The programs will be available from 0600 to 2359 local time throughout the greater St. Petersburg region, with a population of 14 million, on 71.24 MHz UKV. Until now, just two hours of RFE/RL programs were broadcast daily by Radio Baltika, and programs also were available on a St. Petersburg AM station. Research shows that Russians prefer FM and UKV radio for news and information; AM is less popular. RFE/RL broadcasts on AM in Moscow and for a limited number of hours daily on AM, FM and UKV in 22 other Russian cities.

"We are pleased that Russian authorities permitted Radio Baltika to amend its license so that Radio Liberty programs will be heard on UKV in Russia's second-largest city," said Hirschberg. "We hope that this is a first step by the authorities to allow Radio Liberty to enhance its local broadcasting throughout Russia, including access to an FM frequency in Moscow."

Radio Baltika has carried some RFE/RL programming since 1992, longer than any domestic radio station in Russia.

RFE/RL President Thomas A. Dine added that "I am especially pleased that these programs are being carried by Radio Baltika, RFE/RL's oldest broadcasting partner in Russia. We are gratified to have the opportunity to expand this valuable relationship."

RFE/RL's Russian Service broadcasts are on the air 24 hours a day, seven days a week, with programs produced in Prague and the service's Moscow, St. Petersburg and Ekaterinburg Bureaus and transmitted to listeners via shortwave, satellite and AM, FM and UKV signals provided by local affiliate stations in Russia, Azerbaijan, Georgia, Kazakhstan, Kyrgyzstan, Moldova and

Ukraine. Russian Service programming is also available via the Internet, at the service's website www.svoboda.org and at www.rferl.org.

The Broadcasting Board of Governors is a nine-member, presidentially appointed body which supervises all U.S. government-supported international broadcasting, including Radio Free Europe/Radio Liberty and VOA, Radio Free Asia, Radio and TV Mart?the Middle East Television Network (Al Hurra), Radio Sawa, and Radio Farda. The services broadcast in 55 languages to over 100 million people around the world. Current governors include Kenneth Y. Tomlinson, Chairman; Joaquin F. Blaya; Blanquita Walsh Cullum; D. Jeffrey Hirschberg; Edward E. Kaufman; Norman J. Pattiz; Steven J. Simmons; and Condoleezza Rice, Secretary of State, who serves as an ex officio member.

Radio Free Europe/Radio Liberty is a private, international communications service to Eastern and Southeastern Europe, Russia, the Caucasus, Central Asia, the Middle East, and Southwest Asia, funded by the U.S. Congress through the Broadcasting Board of Governors.

The annual Winter SWL Fest, sponsored by LWCA's sister organization, the

North American Shortwave Association (NASWA), will convene on Friday, 11 March 2005. It is typically attended by 200-some DXers from around the world, and in addition to shortwave broadcasting, often deals with topics ranging from longwave to the scanner bands.

This event marks the 8th year in Kulpsville, PA.

For more information and registration, visit www.swlfest.com.

Lowest rates are available by registering before March 1.

>if a "public service" is being rendered?  You?

Until the mid-1980s, the FCC did, and they had some fairly stanadardized
rules on the subject.

Today, nobody does.  And if you look at the current statistics, most people
ARE turning their radios off.  Radio listening has dropped considerably
except in the car, where there is a fairly captive audience.  And, in the
car, we have people who seldom listen to any one station for more than
two minutes.  That does not sound like ANY stations, therefore, are providing
the service the listeners are looking for.

It is made worse in that there are a lot of small niche markets that were
once served by radio stations, but which are no longer served because of
the increased operating costs and license cost has made it unprofitable for
them to broadcast to a small but often vocal market.

Thursday - February 10, 2005
By Macworld staff

Satellite radio company Sirius has confirmed that it discussed the possibility of adding a digital radio service to the iPod with Apple, but the company declined the offer.

According to a Sirius spokesman, Apple CEO Steve jobs didn't see a need to combine the orbital broadcasters functions in the device.
However, although Jobs said he does not currently believe iPod users need anything other than the ability to download thousands of songs, he said this might change in the future, especially if satellite radio provided more interesting content.

Sirius CEO Mel Karmazin told the FT: "Whether you put satellite radio in a cell phone, video game or MP3 player this could be an enhancement." To back up his argument he noted Sony's decision to add radio to its Walkman cassette player.

Analysts have previously suggested that satellite radio is likely to converge with music players and other portable devices, writes Reuters.

While Satellite radio remains a small market in the US, it is expected to grow. A survey by JPMorgan found that demand is strong, and predicted subscribers will increase to 35m by 2010.

Here in the UK of course the focus is on DAB - a completely different approach to digital radio and one that uses a different codec for compressing the digital audio.

Those rules were widely flaunted to the point of meaninglessness. Today's radio stations air at least as much "public service" content, and in fact it's the same content as back then, as far as I can tell.

If you're using Linux, the "at" command probably does all that you need
done without extra programs.

Under linux you can use streamripper, workes well

(debian:)
apt-get install streamripper

Good! The market is working, then.

When the value of the stations gets to be so low
because nobody is listening, then perhaps you
will purchase a station yourself, and make zillions.

Good luck to you!

Has anybody out there ever heard of a radio rating survey
company called the Midwest Radio Ratings Center?  I believe
they can help me with a survey I need to do but I have been
unable to locate or contact them.  Any information would
be helpful.

Feel free to respond directly to me if you know anything
about them using chofack@nsns.com.

For sale:

The "Radio Crazy" is baaaakkk!!! Hi!

Partial interest in new LPTV CP for a very rich and
famous Delaware coastal city. I will disclose when you
contact me personally. It is for a UHF channel. 20,000
watts ERP, 24 hour license. Analog or digital

transmission permitted.

This is a joint venture. There is an element of risk
and you could lose all or part of your investment.

FCC has already granted the CP and I have filed to
transfer it to myself.

Active or inactive investors with at least $10,000
each are welcome. With care, we can build the station
for $50,000 or so.

Please email or call anytime (478)741-1710 in Macon,
GA.

No, I do not have a Swiss bank account and I do not
have a one-way ticket to Rio purchased with small
unmarked bills! I am not on parole! Hi!

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"

1 February 2005
Stuart Miles

Sony has launched a new DAB FM walkman called the XDR-M1 that offers a four-line backlit LCD display complete with clock.

The unit comes with a capacity to store over 40 of your favourite stations
in a portable unit and because it has an FM radio built-in, if you find
yourself in a non-DAB area you can always down grade the signal.

The XDR-M1 comes in a black acrylic and brushed silver aluminium casing for
the ultimate in stylish finish.

Sony has yet to set the price for the player.

By Dawn C. Chmielewski
Knight Ridder Newspapers
February 13, 2005

The "Rock and Roll Geek Show" broadcasts twice a week from San Francisco. But you won't find its distinctive mix of good time rock 'n' roll, beer and Macworld commentary anywhere on the radio.

The half-hour show, hosted by Michael Butler, is delivered directly to listeners' iPods and other digital music players.

It's among a growing number of podcasts, a new online outlet for amateur broadcasters to run their own pirate radio stations. No government approval is required.

Butler's shows have attracted enough of a following to support an eight-country European concert tour for his rock band, American Heartbreak. "During the past four months of me doing this podcast my band has gotten more exposure than in the seven years we've been together," Butler said.

It's hard to imagine giant radio conglomerates fretting over such harmless-sounding podcasts as "The Dawn and Drew Show."
But technology can pounce on unsuspecting, entrenched businesses, and podcasting seems to hold the same disruptive potential as TiVo, giving everyone the power to listen to the radio shows they want whenever they want.

"The devices are listening for us, recording while you're not there, filling up with programs that you like," said Jim Griffin, chief executive of Cherry Lane Digital, a consulting firm specializing in new forms of music and entertainment delivery. "As we move from this 'channel we' to 'channel me,' the intriguing question to marketers is: 'How do I program for that?' Podcasting is the answer."

Podcasts take advantage of an online subscription format known as RSS -- short for really simple syndication. The software is designed to scour the Web for the news stories posted by traditional publications or an entry posted by a blogger. A separate piece of software pulls all the feeds together in one place on your computer.

Podcasting works in the same way. Subscribe to specific Podcasts, and the software finds the latest feeds and transfers the audio files automatically to iTunes, Apple's digital media jukebox. When an iPod is plugged into a computer, it downloads the podcasts. The software also works with other music management programs and digital music players.

Two things happened to ignite the podcasting phenomenon.

First, there was the popularity of Apple Computer's portable digital music players. With gigabytes of hard drive space to fill, iPods are voracious consumers of fresh audio content. Then Internet entrepreneur Adam Curry, a one-time MTV host, began podcasting his "Daily Source Code," a freely distributed variety show. That inspired imitators.

Many podcasts have the rambling "Look Ma, I'm a broadcaster" feel of college or ham radio.

But podcasts do include a handful of professionally produced shows, such as Boston public radio station WGBH's "Morning Stories," "The Al Franken Show" on Air America and programming from the BBC.

Fans of independent music will find podcasting an endless source of music discovery.

Take, for example, "The $250 Million Radio Show," created by Derrick Oien.

Oien's show focuses on overlooked musical genres such as progressive emo, electronica and punk/hardcore. His audience has grown to about 25,000 regular listeners since the first podcast Oct. 14.

To listen to a podcast, you will need software that reads RSS 2.0 feeds with enclosed audio files.

The software is available at sites like www.iPodderX.com or www.iPodder.net. The software -- some versions are free or available for a free trial -- automatically downloads audio files to your computer and moves the tracks to iTunes or another music management program for transfer to your iPod or other digital music player. All you do is subscribe to podcast feeds and your machine does the rest.

Of course, finding what feeds to listen to can be as frustrating as tuning into a radio station in an unfamiliar city. Expect a good deal of trial and error.

llen Weiner, research director with the Gartner market research firm, said podcasting remains largely a hobbyist phenomenon, attracting "anybody who's ever had a microphone or worked at a college radio station."

Feb 12 2005

In India WorldSpace Satellite Radio has introduced a new age satellite receiver, 'Diva'.

With user-friendly features and horizontal design, Diva combines aesthetics with increased functionality and is compatible with CD players or any rack-type music system, a company statement said here.

The remote control, which comes with the receiver, has a provision to preset up to 10 channels.

Diva's price will be Rs 4990 (including an annual subscription fee of Rs 1200 for WorldSpace Satellite Radio).

A pioneer in satellite radio, WorldSpace boasts of over 35 radio stations for various genres of music -- jazz, classical, old hindi film music, rock.

It also offeres two Indian classic channels and five regional Indian channels on its network.

3 February 2005
New Scientist
Celeste Biever

Every night, Adam Curry's iPod downloads a raft of radio shows from the internet while he is asleep. Then, as the former MTV DJ drives to work the next day, he listens to his selection on his iPod. And he is not limited to conventional broadcasters. He has a wide choice of geeky talk shows, tracks by indie bands, satirical comedy and reviews of obscure movies.

What UK-based Curry is using is an emerging method of audio file distribution that he helped develop. He and co-creator David Winer call the idea "podcasting", although it works just as well on other types of MP3 player.

As a DJ constantly on the lookout for new music, Curry found it tiresome and time-consuming to surf the net for new material and then manually transfer tracks from his PC to his iPod.

A new piece of software solves both these problems because it automatically sends newly posted audio files to an MP3 player's music management software as soon as they arrive online. "The beautiful thing about it is that you can take the internet with you and you don't need to sit there and download it," Curry says.

It differs from internet radio because you do not have to tune in at specific times. "It's really TiVo for the radio," says Mikel Ellcessor of WNYC Radio, a New York City station that is broadcast on National Public Radio (NPR). WNYC started podcasting its weekly show On the Media at the beginning of the year. "Timing has been taken out of the equation," he says.

Unlike the MP3 files that stations such as NPR, the BBC and ABC in Australia make available online, which you can pick up after they have been broadcast, podcasts are downloaded directly to subscribers' MP3 players during the owner's downtime - which is usually the small hours.

"Say you are interested in new material from 100 websites. If you didn't have podcasting, how in the hell would you process so much info?" says Eric Rice of San Francisco, who runs his own podcast - the Eric Rice Show.

Podcasting is in effect an audio version of Really Simple Syndication (RSS), which enables a website like newscientist.com to scan itself continuously for new postings and send subscribers each new headline as a pop-up. It saves subscribers from having to visit hundreds of websites just to keep up with the news (New Scientist print edition, 29 May 2004).

The difference is that podcasting has to deliver large audio files, which may contain tens of megabytes of data, rather than simple news headlines. So, Winer wrote a new version of RSS software to handle large audio files. Then Curry wrote a "podcatcher" program called iPodder, downloadable from www.ipodder.org that automatically downloads any new audio files that appear on any RSS 2.0 feeds an individual subscribes to.

It works on a PC or Mac and downloads to any MP3 player, not just iPod. As pods arrive on the computer, iPodder creates separate folders or "playlists" inside the PC's music management software, such as iTunes, and names the folder after the feed, such as "The Eric Rice Show".

Making RSS audio-capable "was not rocket science" says Tim Bray, a web technologist at Sun Microsystems in Vancouver, Canada, who helped to develop the original RSS. But it was "an important conceptual leap" that could not have come at a more appropriate time.

The ubiquity of MP3 players, the emergence of easy-to-use, inexpensive audio-editing software, and the explosion in the number of blogs where information on new podcasts is posted, has created an environment ripe for podcasting. There are now more than 700,000 different podcasts to subscribe to, compared with 5000 only three months ago.

While some traditional broadcasters are now podcasting, the majority of postings are by geeks who keep up with the emerging technology. As a result the casts tend to be a little rough at the edges, and some are positively bizarre. Fancy musical news? Try the Tapdancing News, a satirical news round-up sung by California-based Sondra Lowell while she tap dances.

Meanwhile, a host of talk shows on computer programming has sprung up. Religious shows are being dubbed "godcasts" by bloggers. "None of these would find themselves on mainstream radio," Curry says. "You can literally set up a radio station in your basement," says Michael Geogehan, who runs Reel Reviews, a movie review podcast, based in Newport Beach, California, US.

But even traditional broadcasters see podcasting as useful. "The technology is not a threat to us, but rather a way to attract more listeners by providing new ways to access programmes," says John Marino, a spokesman for the US National Association of Broadcasters. Curry agrees that the immediacy of conventional radio ensures it will always have a place. "If they find Osama bin Laden, don't run to your iPod for the news," he says.

Barry Crimmins, comedian and comedy writer from Air America Radio, and Randy Credico, comedian and political activist, bring  you the best comedians and  political comedy writers every Tuesday night. They rant at the current political scene,  doing material that will never make it to the airwaves as we know them.   Depending on which artists and writers appear on any given night echoes of Lord Buckley, Lenny Bruce, and Woody Guthrie may be heard in the house.

8PM Tuesday nights at
Rocky Sullivan's  Bar
129 Lexington Ave @ 28th street.
Manhattan

(One block east of the 28th street Lexington Ave local Subway stop.)

Most nights the hat is passed.  On a night that has several people booked, $5 or $10 is collected at the door.

By Sandra Pedicini
February 14, 2005

Central Florida ham radio operators have had quite a year.

During this past summer's hurricanes, many stayed in shelters providing backup communications to American Red Cross officials. And one, University of Central Florida professor Charles Harpole, helped provide communications in the wake of December's deadly tsunami.

Amateur radio operators from the Southeastern United States gathered this past weekend for HamCation. Attendance -- an estimated 8,000 people -- was up from the previous year, when about 6,000 attended.

The hurricanes might have renewed some ham radio operators' interest in their hobby, said Cindy Radice, chairman of this year's event.

"People who have been in radio who perhaps were tired of it a little bit, it's renewing their interest," she said.

Ham radio operators use two-way radio stations to make contacts around the world, communicating by voice, computers and Morse code.

Many of the amateur radio operators attending this weekend's event appeared to be in their 50s, 60s and 70s. Attracting new generations of amateur radio operators can be "a bit of a struggle," Radice said, particularly with so much newfangled technology attracting younger people.

But Harpole, who conducted a seminar on Saturday about his experience after the tsunami, said young people overlooking ham radio are missing out.

Amateur radio provides a challenge, a way for people to meet people from other cultures and provide community service, he said.

"The thing I wish we would do more is appeal to the idea of adventure and secret communication," he said.

Harpole said he had originally planned to set up a ham radio operation when he visited the Andaman and Nicobar Islands, in the Bay of Bengal between India and Thailand, in December.

Harpole never got the chance to train anyone in ham radio operations. Instead, he helped provide communications after the earthquake and resulting tsunami.

For about 20 hours, he and his fellow ham radio operators -- sometimes using car batteries to run their radios -- relayed information to the mainland, helping survivors contact relatives and friends.

It wasn't Harpole's first experience pitching in after a natural disaster. As a teenager, Harpole said, he helped with communications after a flood hit Southern Illinois in the late 1950s. During the summer's hurricanes, Harpole got eyewitness reports from the Caribbean before the storms headed to Florida, and he relayed the information to the National Hurricane Center.

Many ham radio operators tend to have adventurous spirits, Harpole said, mentioning how a group of ham radio operators are on an expedition to a remote island off the coast of Antarctica.

But ham radio operators are savvy about other types of communication as well.

When asked how he'd heard about the Antarctica expedition, Harpole smiled.

"The Internet," he said.

Hmmm, I want one of those!  It's Sony and it's new; I wouldn't be surprised
if itt was at least �180 :-(

There are reports that is not (at least in the UK).
There are too many programmes in each transport stream, therefore the maximum bandwidth is approximately 12kHz.
However, most DAB radios are small portables, and unlikely to produce HiFi audio. Even with real HiFi radios, I doubt I you would notice any difference.
Ian.

Barry Crimmins, comedy writer from Air America Radio, and Randy Credico, political activist, comedian, and WBAI personality bring you the best comedians and political comedy writers every Tuesday night. They rant at the current political scene, doing material that will never make it to the airwaves as we know them.

Depending on which artists and writers appear on any given night echoes of Lord Buckley, Lenny Bruce, and Woody Guthrie may be heard in the house.

http://www.barrycrimmins.com/index.php?page=home

8PM Tuesday nights at
Rocky Sullivan's Bar
129 Lexington Ave @ 28th street.
Manhattan

(One block east of the 28th st. Lexington Ave local subway stop.)

Most nights the hat is passed. On a night that has several people booked, $5 or $10 is collected at the door.

http://www.nyireland.com/bars/grammercy/rockysullivans.htm

Imagination Technologies is demonstrating its Electronic Programme Guide (EPG) support for DAB digital radios at 3GSM 2005. In addition the company is also showing the first handheld DAB radio with pause, rewind, record and MP3 support.

The new EPG receiver and front-end software from Ensigma enables users to browse programmes for a single station or all programmes on at a particular time, and to select them for scheduled listening or recording to SD memory card. The EPG is being demonstrated on the advanced PURE Digital's - Bug DAB digital radio.

Says David McBrien, VP Business Development, Imagination Technologies:

"The EPG brings the functionality we now take for granted in digital television broadcasts to DAB digital radio and is set to permanently change the way listeners interact with their radios."

Both Ensigma and PURE Digital have been actively involved in the WorldDAB EPG TaskForce's development of a new open standard EPG.

Imagination's IP dominates the DAB market, with 70% market share. It played a pivotal role in key DAB innovations such as the first sub-�100 DAB receivers and the first DAB radios with pause, rewind and record.

Imagination Technologies' IP features in the vast majority of handheld DAB products and the WorldDAB press event at 3GSM will see the debut of the first handheld DAB radios with pause and record.

The new Kino chip from Frontier Silicon, launched at the show, provides a dedicated hardware solution for T-DMB based on the META(tm) processor core and Ensigma UCC (Universal Communications Coprocessor) intellectual property licensed from Imagination Technologies.  This provides mobile TV handset manufacturers with maximum flexibility for configuring their handsets and the options that they can provide to their customers.

For sale:

(The "Radio Crazy" is baaaakkkkk!) Hi!

Partial interest in CP for LPTV station in nice Delaware coastal community. Very famous and damn rich!

This is a joint venture. There is an element of risk and you could lose all or part of your investment.

Active or inactive investors with at least $10,000 each are welcome.

I have already filed with the FCC for transfer of ownership and initial approval is expected on or about March 7th.

When you find out where this is, you are going to jump up and down!

Tel: (478)741-1710 in Macon, GA

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

Useless voice tracks, too many promos and silly channel ID's get real
boring real fast on the Sirius music channels.  Does XM pump out the
same silly nonsense between every song??

While XM may indeed "best by far," you state that Mel's channel lineup "made
no sense."  This is really not very informative.   From the viewpoint of a
programmer or listener, you need to provide some _reasons_ why, to you,
"Mel's channel lineup made no sense."  Lacking the reasons, nobody know what
the heck you mean by the statement.  Thanks.

Radio Guangdong provided us with a special CD called "Sentimental String". This is a disc for pure music enjoyment with the violin as the key instrument and multi-accompaniment of various human sounds. With its gentle, smooth and stretching style, the string expresses affectionate feeling and communicates with audients by humanized musical language. If you want to be part of that beautiful experience, you will have to answer a simple question:

According to Chinese calendar, which animal represents 2005? (Answer: Chinese Chicken )

In addition to our main prize, you will also receive some other exciting merchandise from our partner broadcasters!

You will easily give us the right answer if you read carefully our newsletter and listen to Radio Guangdong programme this weekend on WRN ( http://www.wrn.org/ ).

So, we are looking forward to your answers which you can send until Thursday, February 24 to mail@wrn.org. Please put "WRN English Newsletter" into the subject line, and don't forget your name and address.

I'd like to see Mel get rid of all the useless voice tracking, excessive promos and channel ID's between every song on the Sirius music channels.  Sirius is starting to sound just like overproduced FM minus a few commercials.

WTTB 1490 Vero Beach, FL TEST
Date(s): February 20, 2005 (Late Saturday night into Sunday Morning)
Time: 00:00AM EST until 00:20AM EST (20 Minute Test)
Modes of Operation: 1KW Non-Directional
Programming: Morse Code ID's, Sweep Tones, etc.

Reception reports can be e-mailed to:
gualdaj@bellsouth.net

Special thanks to Juan Gualda for arranging this test! Great chance
to add to your GY totals.

=================================================

WISN 1130 Milwaukee, WI TEST
Date: February 20, 2005 (Late Saturday night into Sunday morning)
Time: 0000AM CST-0100AM CST (1 Hour Test)
Modes of Operation: 50Kw Daytime Pattern
Programming:
00:06-News
00:06-Art Bell Coast to Coast AM with CW ID's mixed in near the
top of the hour.

NOTE: An impromptu test last weekend netted reports from GA and AZ,
so this one can really get out.

Test is being conducted by Mr. Kent Winrich, Engineer. He has requested
receptions reports be sent to him at:

WISN Radio
12000 West Howard Ave.
Greenfield, WI 53228

Mr. Winrich has specifically asked for recorded audio reports.

His e-mail address is:
KENTWINRICH@clearchannel.com

Thanks to the ABDX List for arranging this test.

===================================================

WOKY 920 Milwaukee, WI TEST
Date: February 20, 2005 (Late Saturday night into Sunday morning)
Time: 0000AM CST-0100AM CST (1 Hour Test)

Modes of Operation:
00:00-00:30AM-1KW Non-Directional
00:30-01:00-5kw Directional East
Programming: Standards and AC. No news at Top of the hour. CW Morse Code ID's and possibly sweep tones will be included.

Test is being conducted by Mr. Kent Winrich, Engineer. He has requested receptions reports be sent to him at:

WOKY-AM
12000 West Howard Ave.
Greenfield, WI 53228

Mr. Winrich has specifically asked for recorded audio reports.

His e-mail address is:
KENTWINRICH@clearchannel.com

Thanks to the ABDX list for arranging this test.
=====================================================

KEVA 1240 Evanston, WY TEST
Date: February 20, (Late Saturday night-Sunday morning)
Time: 00:05AM MST-00:55AM MST (50 Minute Test)
Modes of Operation: 1KW
Programming: Morse Code IDs at both 5 and 10 words per minute, Voice ID's saying "This is KEVA Evanston Wyoming conducting a distance reception test".

KEVA's last test got out really well...and conditions have generally been good
this week. Try for this one!

Reception reports may be sent to:

KEVA
P.O. Box 190
Evanston, WY 82930

Or via e-mail:
michaelj@vcn.com

Our special thanks to Michael Richard at KEVA for this test and to the ABDX list for arranging it!

by Radio Free Nashville

18 February 2005

Radio Free Nashville (WRFN) is a new100-watt low power FM (LPFM) community radio station that is about to become a reality with its newly acquired FCC license. Our basic idea is simple. We believe that since the airwaves belong by law to the public, the public should have access to them. We believe that we have as much of a right to speak on the radio as we do to listen. And we have a unique opportunity. Prometheus Radio Project is teaming up with Radio Free Nashville to unbuckle the Bible belt for progressive news and music for the Prometheus Radio Project's Barnraising of Radio Free Nashville!

Thousands of these LPFM licenses were granted. Virtually all of them, however, went either to government departments-of-transportation or small rural churches. WRFN is one of very few progressive organizations in the entire country to receive one. There are not going to be many stations like WRFN out there. This is true despite the fact that only a strong, national movement made WRFN possible.

WRFN recognizes the importance of coverage of progressive causes by "major" media, but has long felt it even more necessary to create and control our own media. We believe that the rather rough & tumble atmosphere of a community radio station will bring diverse communities in contact with each other, in very novel and exciting ways.

We believe that our great foes are not so much ideologies as apathy and distraction. And this makes WRFN an enormously important undertaking.

WRFN will program a 60-40 mix of news (information, talk and call-in shows) and music. Though each day will have some consistent elements, no two days will be exactly alike. All the broadcast elements will be complementary.

Some of the programming will be of national origin. We envision bringing Free Speech Radio, Democracy Now, Counterspin and other like shows into the Nashville marketplace for the first time. But the bulk of programming will be locally produced by members of the Nashville community.

A primary aim of WRFN has always been to provide a space for students and other young people to work with professionals to learn to produce their own programming, learn the technology, and above all, to understand through direct experience that the airwaves belong to them. Our goal is to promote young people's intellectual, creative, and professional growth through training and access to media.

Five years after the birth of the Low Power FM service, and like so many other applicants, Radio Free Nashville (WRFN) has had to struggle and wait months for even minor modifications. Now after the introduction of the The Prometheus Radio Project (PRP) is teaming up with Radio Free Nashville to unbuckle the Bible belt for progressive news and music for the Prometheus Radio Project's Barnraising of Radio Free Nashville!

In the spirit of neighbors pulling together to put up a new building, PRP organizers will gather hundreds of Low Power FM Radio applicants, journalists, radio engineers, students, lawyers, musicians, and activists from across the U.S. to tune the antenna, finish the studio, and flip on the station switch! People will gather from across the US to descend on Nashville to construct the radio station in a weekend.

Although, we have a start-up date and an FCC license, we still do not have all that is necessary to get on the air. Radio Free Nashville needs the help of the community and financial support to get on the air and stay on. The start up costs of a community radio station is tremendous and the support of the community is key in making Radio Free Nashville a reality. There is a long list of audio and studio equipment that we will be needing such as a 100-wat transmitter, a mini disc player, stereo limiters, and so much more. The station is also in the process of being constructed and more money is needed to finish the work that needs to be done by April 2nd. Please, Nashville, help us reclaim our airwaves! Let's give low power(fm) back to the people!

If some people are unable to assist WRFN financially or through donations of equipment, please feel free to help the independent media cause and come out and help us build the station. Also, WRFN invites everyone to come and join Prometheus Radio Project and people from all over America to attend the Radio Barnraising! Come to learn or teach essential organizing and radio skills, and to celebrate the birth of a new free voice. To register online for our conference, or to learn more about the Barnraising, which will feature dozens of informative workshops, great food, and music, as well as the incomparable experience of building this new station, visit the Prometheus Barnraising registration page to sign up to help out!

The recommended donation for the entire weekend is $100 or $40 for one day if you are coming from out of town. Pay what you can afford. If you are coming from the Nashville area, than those fees are not applicable to you. Food and simple housing arrangements are included in the registration price. Scholarships are available, and no one will be turned away for lack of funds. Contact us to get a fee waiver/reduction. We need you to lend a hand in Nashville- so don't let money be an obstacle for you!

Help us build the Free Radio Movement and demand that democracy be brought back to the airwaves!

DAB has a boost in France this week as the President of the French Regulatory Authority (CSA) told delegates at a conference that Digital Radio was inevitable.

Dominique Baudis, speaking in Paris said:

"Digital radio is an inevitable and desirable evolution of radio. There is no reason to remain in analogue and no reason not to benefit from digital technologies and their advantages to the listener."

Baudis was speaking at the opening of Le Radio!, a major event for radio in France. The clear message coming from the conference this year was that France is ready for digital radio.  Earlier, during a summit on January 27, Minister of Industry, Patrick Devedjian, signalled government support when he said that digital radio was his first priority.

The legislative framework for digital radio in France is now in place. Baudis told the conference:

"The CSA will soon launch a consultation for digital radio and this will be the starting point to find a way forward." The consultation will determine how the radio industry wishes to move into the digital age, and will be followed by a call to tender before the end of 2005.

Baudis noted that while Paris enjoys around 50 FM services, programme content could still be extended in the Capital. In other parts of the country listeners can access only 10 FM stations.

Philippe Levrier, CSA Counsellor, who is in charge of a planned reorganisation project of the FM band in France concluded that such a "re-farming" of FM licences is likely to free up, at best, 10% of spectrum for new, innovative programming.

Public and commercial radio broadcasters, and trade unions, all present at the conference, agreed with M Levrier that, given the lack of analogue spectrum available for new content programming, digital radio was the way forward.

Baudis concluded:

"Our objectives this year are to further the reach and diversity of radio, which is already one of the most diverse radio landscapes in

Europe. But we can do even better for the benefit of the French consumer, on a free-of-charge basis."

Annika Nyberg, President of the WorldDAB Forum said:

"It is very encouraging to see France clearly pushing for digital radio. We especially commend the CSA's support and backing for the provision of a secure legal framework for digital radio in France. WorldDAB looks forward to welcoming France to the family of nearly 40 countries already developing DAB Digital Radio services."

On the WorldDAB stand at Le Radio!, delegates could experience several examples of broadcast delivery using DAB Digital Radio. Multiplex operator and solution provider VDL (Voix du Lyon), transmitted a single multiplex to the conference on which there were four audio services, one data service and one DMB (digital multimedia broadcasting) service.

The DMB broadcast was also available for viewing via both a Samsung mobile phone, and radio manufacturer Perstel's DMB solution. VDL broadcast traffic, weather and news services via a Blaupunkt Woodstock DAB 54 combined with a PDA. The industry marketing body for digital radio in France, VRN (Vivement le Radio Numerique), was also available on the stand to answer delegates' questions.

All the useless voicetracks and excessive promos suck.  Sirius music
channels are the same old school radio nonsense minus a few commercials
but all the other stupid interruptions between the music cuts are still
there.

Tyler Wells wrote:

Hello Rock-it Radio Listeners,

We have added another great 8 new Shows in our archives website (shows#1213 to #1220) this week on Rock-it Radio and hope you all enjoy them Our Oldies shows
online are in our archives page at:
http://www.palmsradio.com/rockittext.htm

Plus we have added a new Rockin' DJ to our Rock-it Family here -- his name is Brian Lee and his premiere Rock-it Radio broadcast is featured this week on Rock-it Radio plus the other great shows that the Rock-it DJ's have brought you this week!

=============================================

DAVE JUSTICE AND RADIOACTIVE GOLD WITH A TRIBUTE TO RAY PETERSON ON ROCK-IT #1213

This past month we have lost another Rock and Roll legend that was there at the beginnings of Rock and Roll -- Ray Peterson.  This show is dedicated to his music and many hits along with many memories of Ray by his fellow Rockers.
Here is the playlist of the show all songs sung by Ray Peterson.

1. Fever
2. The wonder of you
3. Goodnight my love
4. Tell Laura I love her
5. Corinna Corinna
6. Sweet Little Kathy
7. Missing you
8. I could have loved you so well
9. Give us your blessing
10. My blue angel
11. Till Then
12. Answer me my love
13. What do you want to make those eyes at me for
14. Suddenly
15. I'm gone

The show also features interviews and memories of Ray by Troy Shondell, Freddy Boom Boom Cannon, Claudia Peterson, and David Sommerville of The Diamonds.
If you have any comments on this show or would like to send Dave a request for an upcoming show or would just like to drop him an e mail and say hello you can contact him on RadioActivE Gold at:

Radioactivegold@hotmail.com

We have added 22 more new members to the Listeners Club since our last newsletter. We now have that magic number of 4467 members exactly! that have
joined the Rock-it Radio Listeners Club.
We hope that you enjoy the rare 50's Rock and Roll,
Rockabilly and Doo Wop (which most commercial radio stations have forgotten)
that we are able to play
for you from Rock-it Radio. Remember, we are here for you!
So if you ever have any requests, dedications, comments and
suggestions we always love to hear from our listeners.
Our e mail address is: Rockitradio@netzero.net

=============================================
More New Items in the Rock-it Store.....

We want to expand our archives page soon to hold 20 shows, and to do that we need revenue... and to do that we have added more great items this past week in the Rock-it Store.
We have added the actual unedited, uncut actual Vintage Radio
Broadcasts for sale in our Rock-it Store.
Our latest New Releases for 2005....

More Hound Dog Broadcasts!!!

-- George "Hound Dog" Lorenz on WBLK Radio in Buffalo, New York from one of his last broadcasts on 2/3/1972 and his "Old Gold" Radio show.

&

-- Porky Chedwick on WAMO in Pittsburgh, Pa. from 14 June, 1960 which features a lot of rare local doo wop groups.

-- Bruce Morrow "Cousin Brucie" on WABC Radio New York City on 9/9/1968 Parts 1 and 2 (each part is an hour long)

-- Douglas Henderson a/k/a "JOCKO" on WOV 1280 AM Radio in New York City from June 10th, 1957.

-- Jocko on WCBS FM - New York with his oldies show of 90 minutes from June of 1991.

-- Wolfman Jack on XERB from December 1967 on 2 CD's and 90 min. in length.

More Rare Radio broadcasts that are unedited in the Rock-it Store at:
http://www.palmsradio.com/store.html
For playlists etc. of these shows just click to each title of these shows.
These are recordings from broadcasts from the date shown.

=============================================
The Rock-it Radio Store -- Helps these shows keep coming.

Do you purchase music online? If and when you do could you help support Rock-it Radio at the same time? All of the DJ's here at Rock-it Radio are putting there time in for the love of the music and the joy we get from the letters from our
listeners. But it still takes money to bring these shows online.
Copyright fees (Ascap, BMI, SESAC, RIAA all want $$ from Rock-it Radio) and band and webspace etc.
So if you can when you are purchasing Music or Books etc.
Could you please use the links to Amazon.com on our website or check out the Oldies music we have in our Rock-it Store.
When you order anything off this site a small percentage
helps keep the Rock-it Flying and broadcasting online.

The Rock-it Radio Store website is:

http://www.palmsradio.com/store.html

============================================
How I became familiar with the newest Rock-it DJ

As we mentioned earlier in this newsletter we have a new DJ aboard Rock-it Radio here, and we are very pleased to have him aboard... that being Brian Lee. I first came to know of Brian actually clear back in 1988. I always enjoyed the "Gold Rush" Country of Northern California and while Jammin Jan and myself were up and cruising Highway 49 exploring all the wonderful history of the very beginnings of the Golden State and all the small towns we stopped at some friends house in Placerville, California. They knew me and Jan were "into" that Rockabilly music and told us to tune into a small local station at KVMR in Nevada City. I was awestruck here is a DJ actually playing that rare Rockabilly music!!! along with some great doo wop and real 50's oldies!!! Man why I thought to myself don't we have anything like that down here in Southern California... even back then the 50's scene was fading out to the sixties and even touching on the early 70's to be considered oldies. That DJ playing that music was Brian Lee. A couple of year's ago we noticed that that station KVMR was broadcasting online and now a mere 17 years later from that first tune in -- Welcome aboard Brian!

============================================
Cool Bobby B -- Las Vegas Doo Wop Convention !!!!!

Coming to Las Vegas Fall 2005! Original Groups! Full Orchestra! Concerts, Seminars, Workshops, Amateur Doo Wop Contest, Records and Posters for Collectors!! Details coming soon! Only 1000 tickets will be sold! For preferred priority reservation information, email us today at Promos@doowopstop.com

============================================
Tons of Doo Wop Links and Group
Harmony Sites at
Our Doo Wop Links Page.

http://www.palmsradio.com/doowop.html

=============================================
And of course don't forget our
Rockabilly Links page as well!

Our Rockabilly Links page can be found at:

http://www.palmsradio.com/rockabillylinks.html

=============================================
Tune into the World Online via you Computer

Tune into the World on your Computer....In our Radio Links page we have put
together several directories of sites of Radio Stations that can be heard
around
the world... Come check it out and tune into the world right from your computer

at: http://www.palmsradio.com/radiolinks.html

============================================
Archives page reminder

Remember, if the show that you want to hear is getting close to the bottom of the list of radio shows, you should tune in as soon as you can. These shows to have a high audio quality require a lot of internet bandwidth and memory. And currently we can only afford the 14 latest shows online here at Rock-it Radio.

So, when a new show is put online it knocks the oldest one off the internet server. Usually a show will at least last 10 days, once it is placed in the archives.

============================================

## Come Join the Rock-it Listener's Club

Want to join our Listeners Club?? And be notified when new shows are playing on the Rock-it.
If you are not a member of our listeners club it is really easy to join... just go to our main website at: http://www.rockitradio.net and click the button that reads... "click here to be on our mailing list" at the top of the page. When you click there leave your e mail address and you are in...it's free and it gives you the playlists and news on our latest shows.

=============================================

## The Rock-it DJ Page

Who are all these DJ's on the Rock-it ???
Check out our Rock-it Radio DJ page

at: http://www.palmsradio.com/bio.htm

and see all the folks that make these shows possible.

=============================================

Well that is just about it for this newsletter and playlists of our latest shows. We hope that you enjoy them. We will do our best to keep these shows on for at least 7 days and hopefully 14 days.

All the best always,

Bennie Dingo

My wife is looking at getting a Sirius Radio to listen to Howard Stern in the car and at work.

1) Does Sirius have a portable, Walkman like unit (not just one you can move from the car to the home).

2) How good is the reception inside an office building?

3) What's a good brand or a good place to search for reviews?

Thanks,

The Crutnacker.

DAB works not equally as good as FM MONO.

DAB is 21 dB under FM mono.
In all tests the use word FM, but they do not say is FM Stereo.

Kenta

MT> DAB has a boost in France this week as the President of the
MT> French Regulatory Authority (CSA) told delegates at a
MT> conference that Digital Radio was inevitable.

MT> Dominique Baudis, speaking in Paris said:

MT> "Digital radio is an inevitable and desirable evolution of
MT> radio. There is no reason to remain in analogue and no reason
MT> not to benefit from digital technologies and their advantages
MT> to the listener."

MT> Baudis was speaking at the opening of Le Radio!, a major event
MT> for radio in France. The clear message coming from the
MT> conference this year was that France is ready for digital
MT> radio. Earlier, during a summit on January 27, Minister of
MT> Industry, Patrick Devedjian, signalled government support when
MT> he said that digital radio was his first priority.

MT> The legislative framework for digital radio in France is now in
MT> place. Baudis told the conference:

MT> "The CSA will soon launch a consultation for digital radio and
MT> this will be the starting point to find a way forward." The
MT> consultation will determine how the radio industry wishes to
MT> move into the digital age, and will be followed by a call to
MT> tender before the end of 2005.

MT> Baudis noted that while Paris enjoys around 50 FM services,
MT> programme content could still be extended in the Capital. In
MT> other parts of the
MT> country listeners can access only 10 FM stations.

MT> Philippe Levrier, CSA Counsellor, who is in charge of a planned
MT> reorganisation project of the FM band in France concluded that
MT> such a "re-farming" of FM licences is likely to free up, at
MT> best, 10% of spectrum for new, innovative programming.

MT> Public and commercial radio broadcasters, and trade unions, all
MT> present at the conference, agreed with M Levrier that, given
MT> the lack of analogue spectrum available for new content
MT> programming, digital radio was the way forward.

MT> Baudis concluded:

MT> "Our objectives this year are to further the reach and
MT> diversity of radio, which is already one of the most diverse
MT> radio landscapes in Europe. But we can do even better for the
MT> benefit of the French consumer, on a free-of-charge basis."

MT> Annika Nyberg, President of the WorldDAB Forum said:

MT> "It is very encouraging to see France clearly pushing for
MT> digital radio. We especially commend the CSA's support and
MT> backing for the provision of a secure legal framework for
MT> digital radio in France. WorldDAB looks forward to welcoming
MT> France to the family of nearly 40 countries already developing
MT> DAB Digital Radio services."

MT> On the WorldDAB stand at Le Radio!, delegates could experience
MT> several examples of broadcast delivery using DAB Digital Radio.
MT> Multiplex operator and solution provider VDL (Voix du Lyon),
MT> transmitted a single multiplex to the conference on which there
MT> were four audio services, one data service and one DMB (digital
MT> multimedia broadcasting) service.

MT> The DMB broadcast was also available for viewing via both a
MT> Samsung mobile phone, and radio manufacturer Perstel's DMB
MT> solution. VDL broadcast traffic, weather and news services via
MT> a Blaupunkt Woodstock DAB 54 combined with a PDA. The industry
MT> marketing body for digital radio in France, VRN (Vivement le
MT> Radio Numerique), was also available on the stand to answer
MT> delegates' questions.

MT> radionewsletter@ukradio.com

It really is not correct to suggest that XM & Sirius music channels are the same.  Sirius is FM without commercials.  XM is really much more professionally done, longer playlists, more interesting and diverse music, and generally just better IMO.

When I hear someone suggest they're the same I pretty much assume someone hasn't heard both.

Montreal
February 17 2005

On February 25, 2005, Radio Canada International will be celebrating its 60th anniversary. RCI's history is one of remarkable successes and rich anecdotes. It's a history worth discovering... and rediscovering. Did you know that Radio Canada International has attracted some of the leading lights in Canadian journalism over the years, including future Quebec premier Ren� L�vesque and legendary CBC host Peter Gzowski?

Some might recall that Prime Minister W.L. Mackenzie King set up a shortwave service during the Second World War to inform and entertain our troops overseas with programming from Canada. But few people are aware that RCI also played a key role in promoting Canadian music. After making its debut on the international scene in 1945, RCI quickly became an ambassador for homegrown artists. Many famous names in Canadian music, including Oscar Peterson and Glenn Gould, made some of their first recordings in RCI studios.

---

## RCI Today

- RCI produces programming in nine languages.

- More than 300 hours of programming are broadcast each week via shortwave, satellite and www.RCInet.ca .

- RCI programs are rebroadcast in over 75 countries through its 300 partner stations.

- RCI airs special programming for listeners in Florida and the Caribbean, featuring the best of CBC Radio One and Radio-Canada's Premi�re Cha�ne.
- Listeners from all over the world participate in RCI phone-in shows.
- RCI broadcasts language courses for the whole family.
- The daily Cyberjournal provides a roundup of the key news stories.
- RCI oversees the Canadian Institute for Training in Public Broadcasting, which offers radio, television and new-media training to journalists, managers and technicians in emerging democracies.
- Internet users can listen to live and archived programs in nine languages at www.RCInet.ca and explore a brand-new databank containing over 20,000 links pointing to nearly 200 countries.

### A Special 60th Anniversary Contest for 18 - to 30-Year-Olds Who Want to Build a Better World...

International Development Week (January 30 to February 5) and the UN-sponsored International Year of Microcredit 2005 will be marked in an original way by D�veloppement international Desjardins (DID) and Radio Canada International... the two have teamed up to launch Building the Future Now!, a major worldwide contest for 18- to 30-year-olds.

What can we do in 2005 to build a fairer, more prosperous, more equitable world? Young people around the world will be challenged to answer this ambitious question in a short essay or illustration, giving them a chance to win one of two international development education missions organized by DID in partnership with the Canadian International Development Agency (CIDA). Prizes are valued at $15,000, and contestants can enter by visiting www.RCInet.ca .

RCI has also produced a series of short radio features, consisting of two-to three-minute interviews with young adults whose lives have benefited from microcredit. They hail from Africa, Latin America and Asia, and can be heard on RCI's international airwaves throughout the year.

### Relive the best of RCI on CD and on the Web...

We also invite you to visit a special 60th anniversary section of the RCI website, jointly produced by the CBC Archives team and RCI staff. It contains a wealth of radio and TV clips-with different selections in English and French-that look back at the landmark events of the past 60 years on RCI. Judith

Jasmin, Maurice Chevalier and Ren� L�vesque are just a few of the stars of yesteryear you'll be able to see and hear again. Be sure not to miss this fascinating walk down memory lane at www.RCInet.ca and www.radio-canada.ca/archives .

For further information: Denis Pellerin, Communications Director, RCI, Promotion, Analysis and Broadcasting, French Radio Communications and RCI, (514) 597-4204, denis_pellerin@radio-canada.ca;

Interviews available with our spokespeople: Sylvain Lafrance, Vice-President of French Radio and New Media; Jean Larin, Executive Director of RCI;
A complete press kit with audio and photo archives can be obtained on request

>>>>>> 1)  Does Sirius have a portable, Walkman like unit (not just one
you
can move from the car to the home).

No--perhaps they will before Stern actually gets there at year end.
More likely, it will be into 2006 a bit.

>>>>>> 2)  How good is the reception inside an office building?

Sirius has some significant problems with receptions inside a structure.  XM is really much better in such an environment, but if you don't have a clear view to the sky from within a metal structure it is a longshot.  The best thing to do is to buy one and try it.  If you can't get the preview channel, you won't get the service after activation.

>>>>>> 3)  What's a good brand or a good place to search for reviews?

If I were buying a Sirius radio right now (but I wouldn't be) I would be looking at the Sportster, I think.

Now might be a good time to get her to consider Opie & Anthony; they're already at XM and they can tell fart jokes at least as well as Stern can.

| The Crutnacker.

Your first concern has to be that Stern's not due to be on Sirius for another 10-plus months, yet.

By then, though, Sirius may have a small, portable unit, although the antenna will remain an issue, since it needs to be out in the open, near a window or such, facing the area of sky over the north-central U-S (like Minnesota, North Dakota, or Manitoba).  Inside a building with glass won't work all that well, unless you happen to be in a city where there's repeaters (which may be a good bet, if you live in a large city, or if Sirius has traffic reports for it).

I have a Kenwood in-dash model (the head-end, though, is in the trunk) and I like it.  I'm not all that familiar with the "portable" units, though.  Pop over to a Best Buy or Radio Shack, though, and take a listen.  The best review is the one you do.

19 February 2005

San Francisco

The satellite radio industry, with commercial free music, pro football and baseball -- and soon, shock jock Howard Stern -- has achieved startling subscriber growth in the four years since it was launched.

The hype surrounding the new subscription medium is reminiscent of the kind of euphoria that surrounded dot-coms in the late 1990s, with cadres of ferociously loyal admirers, growth projections of several hundred percent and volatile share prices on heavy volume.

But some observers are beginning to wonder whether there really is that much long-term upside.

"There's going to come a point where you've maximized the people that are willing to pay for radio," says Christopher Reed, chief executive of radio programming consulting firm CSR Media in Denver. "Because a traditional radio requires a $10 clock radio, and you can pretty much get it. But the fancy equipment fee, plus the service fee, really goes after a certain type of customer."

Stifel Nicolaus & Co. analyst Kit Spring estimates that satellite radio will have 35 million to 40 million subscribers by 2013, up from the current total of around 4.5 million. RBC Capital Markets analyst David Bank sees the medium having 33 million subscribers by 2010.

However, in a climate where MP3 players, handheld video games and other portable electronics pose a threat to all radio companies, including traditional ones, J.P. Morgan analyst Barton Crockett suggested in a recent research note that consumer interest in satellite radio may already be declining, based on data his firm compiled.

The debate has played out in the form of shares of Sirius Satellite Radio and XM Satellite Radio, the two satellite radio companies, which have been on a rollercoaster ride often reserved for Internet stocks for the last several months.

Sirius shares, which closed at $2.33 on Sept. 29, had shot up to $9.01 by December 7, amid news that raunchy morning radio host Stern would jump to Sirius in 2006, and that tough radio executive Mel Karmazin would be the company's chief executive. Sirius' average daily volume is a whopping 115 million shares.

XM, boosted by news of a major deal with Major League Baseball, and the run-up toward its unveiling of a new portable device called the MyFi, rose from a May 10 close of $21.62 to $40.05 as of Dec. 20.

Both stocks gathered momentum ahead of last month's Consumer Electronics Show in Las Vegas, but have since eased. XM shares closed at $32.62 on

Friday. Sirius shares closed at $5.87.

Satellite radio has gotten off to a fast start since XM Satellite Radio's launch four years ago, as listeners bored by endless repetition and commercials on traditional radio have begun to embrace the newer medium.

XM offers more than 130 channels of digital radio programming for $9.95 per month, covering every major music format, as well as news, sports and talk. Sirius offers 65 music channels and 65 channels of news, sports and talk subscription for $12.95 a month. Both services offer commercial-free music.

The radios can be purchased pre-installed in a car or truck. Or, in the $100-$600 range, you can buy satellite-ready receivers from manufacturers like Kenwood and Panasonic to install in the car or at home; or portable devices, such as boomboxes or smaller units.

According to J.P. Morgan's survey of more than 1,600 non-subscribers to satellite radio, taken in December, 35 percent said they had interest in subscribing, down from the 43 percent of that same group who expressed such an interest in a May poll.

Crockett said the data indicated that expensive, exclusive content isn't widening the overall market for satellite radio; that new subscribers are more concerned about price than early adopters; and that Apple's iPod and other new devices could be having an adverse impact on interest in XM and Sirius.

XM last week reiterated its forecast that it will end 2005 with 5.5 million subscribers, which would be a 41-percent increase from its total of 3.23 million in 2004. Sirius said its subscriber total would more than double from last year's 1.14 million, to 2.5 million subscribers.

That growth rate will be fueled, the companies say, by the increasing rollout of automobiles that have XM or Sirius radios factory-installed. It will also be helped by the presumed appeal of prominent on-air talent like Howard Stern, who brings his raunchy morning program to Sirius in 2006; sports like Major League Baseball, which debuts on XM this year; and wearable devices like XM's MyFi and Sirius' Sportster.

Crockett says the main appeal of satellite radio is commercial-free music, rather than unique talk-related content, suggesting that the companies might have overpaid on sports and on-air hosts.

But Don Hodges, of the Hodges Fund in Dallas, said it's vital that the medium offer compelling non-musical content, because "there's going to be downloadable music from a lot of sources over the next few years."

The problem with that thesis, says Harry DeMott, a partner at Gothic Capital Management in New York, is that every major sport is now covered by one or the other satellite radio firms, and there are few remaining radio personalities capable of attracting a huge audience that would be available for an exclusive satellite deal. "I don't know what compelling content is out there that can be acquired for satellite radio that can't be heard on terrestrial radio," DeMott said.

Stern has a $100 million deal to join Sirius, after his contract expires with Viacom's Infinity Broadcasting. Sirius also has a $220 million agreement to broadcast NFL games, while XM has paid $650 million for the rights to 11 years of Major League Baseball broadcasts.

Karmazin indicated that Sirius is unlikely to spend so heavily for content in the near future. "There is nothing that is on our list today that would be of a scope of Howard Stern or the NFL or Major League Baseball," he said. Though he also quipped that if talk show queen Oprah Winfrey ever considered having an exclusive program on Sirius, an exception might be made.

Analysts say XM is probably just as unlikely to pay so much to buy content anytime soon.

Given all of this, though, the question of which kind of content drives people to satellite radio isn't really the main issue, says Jim Goss, analyst at Barrington Research in Chicago.

Satellite radio is not expected to replace traditional radio. In Goss' view, people will merely use satellite as an adjunct to the older medium, much in the way they watch both cable and broadcast television.

"Think of HBO and 'The Sopranos,'" he said. "Some people may buy HBO just for 'The Sopranos,' and they may not watch it aside from that. That really isn't going to matter to HBO because they've got a paying subscriber. So if they super-serve enough niches, they can develop a big subscriber base.

"Because satellite radio is subscription-based, and not advertiser-based, on the music side, they're depending on the fact that there's just something you'll want enough to keep your subscription," Goss said.

Certain radio formats are more likely to lose customers to satellite than others, due to the demographics of the audiences they attract, says Reed.

"Formats that target higher, more affluent customers -- Smooth Jazz, for example, the talk formats, classical, public radio to some degree -- those are the people that can afford satellite radio, so I can see them switching to satellite," Reed explained. "I'm not convinced it's going to be a problem for your run-of-the-mill top 40 station."

As for price, Goss said that at price points of $9.95 a month, for XM, and $12.95, for Sirius, the medium is therefore "not that expensive, if you find something of interest."

In RBC Capital analyst David Bank's projection of 33 million satellite radio subscribers by 2010, he estimates that about half of that number will be customers acquired in the retail market, rather than through buyers of cars with radios installed at the factory. That aftermarket will be largely driven by the descendants of the MyFi, and other portables, he said.

"Not all listening takes place in the car," Bank said. "So, if 25 percent of listening occurs in the office, how is one going to do that? Through a boombox, or some other non-auto based device."

The iPod and other MP3 players, with their ability to allow users complete control over the music they hear, concerns all radio companies. XM and Sirius, realizing the need to have a viable handheld strategy, have approached Apple co-founder Steve Jobs about possible alliances, but Jobs has spurned their advances thus far.

XM made a big splash in the wearable device market in December when it introduced the MyFi, a handheld receiver that allows users to save, pause, fast forward and rewind songs they hear on XM.

Because it's so important to keep improving the MyFi in an iPod-dominated landscape, the company is working on ways to broaden the unit's appeal.

"I think there's a number of areas that are obvious from product reviews or things that," said Hugh Panero, the company's chief executive, during XM's quarterly call earlier this month. "We would like to have MP3 capabilities, greater memory, things of that nature. I think across the board you'll see numerous improvements."

Right now, about half of XM's new subscribers come from people who buy cars equipped with XM radios; at Sirius, the figure is around 25 percent, though as Ford and DaimlerChrysler ramp up their rollouts, the percentage will increase.

The firms are getting high take rates from people who opt to keep the service in their cars after a trial period. XM says take rates were about 60 percent in January, a figure Goss called impressive.

XM has major agreements with General Motors , Honda , Toyota and other automakers, while Sirius' partners include DaimlerChrysler , Mercedes, Ford , BMW and Nissan .

Bank agrees that factory activations will be the key factor in widespread acceptance of satellite radio. "If you want a white Tahoe on the lot, and the only one on the lot has XM activated in it, are you going to wait three days for a white Tahoe without an XM in it? Something like a third of the models delivered to the floor from GM today are factory-activated," he said. "I think that makes the sale a lot more passive, and a lot easier to make."

20 February 2005

By Catherine O'Mahony

Relief, disappointment, shock and, in the lucky cases, elation. With these kinds of emotions about, it could only mean the release of the most feared and anticipated report of the year for the radio industry: year-end listenership figures.

The 2004 Joint National Radio Listenership (JNLR) report inevitably marked another blow for RTE's radio output, but it proved yet another vindication for the country's increasingly thriving local radio stations.

Among the more startling developments was the news that 2FM's core audience of 15-to-34-year-olds was down 11 per cent. Serious efforts to revitalise the station's afternoon and evening schedules are now likely.

The good news for RTE was that the Radio 1 evening schedules have picked up, the much-maligned Lyric is doing well - it doubled its share - and Morning Ireland remains by far the most listened-to show on radio.

But the Radio 1 schedule looks to be generally stalled before lunchtime, and only younger guns Rachael English and Ryan Tubridy had anything significant to be happy about.

The latest book was bad news, not only for Marian Finucane - which was hardly surprising given the recent news of her move to weekend radio - but also for mid-morning stalwart Pat Kenny. His listenership was down 31,000 at 301,000, more than RTE's own internal trackings had predicted. Gerry Ryan, meanwhile, gained 22,000 listeners on his 2FM show.

Kenny could argue that his lost ground was partly a knock-on effect of

Finucane's decline in listeners (26,000), but the chances are high that he will be one of the losers in the planned autumn schedule 'tweaking' of Radio 1 in the daytime.

There were celebrations at a host of the newer commercial stations. Local stations gained 21,000 listeners last year overall, and local or regional stations raised their market share to 47 per cent from 46 per cent.

Dublin's Newstalk 106 advanced for a reach of 5 per cent (or 6 per cent of adults), thanks to the new Eamon Dunphy show, which attracted 16,000 listeners.

Overall, Dunphy's performance was seen as adequate, though it failed to thrill. Initiative Media commented in a research note that many in the industry would see this kind of result as "disappointing and a far cry from his glory days on The Last Word''.

George Hook, in Newstalk's drivetime slot, lost some ground, with average quarter hour listenership down 13 per cent at just 7,000.

Q102's spring re-launch gained it three per cent to 12 per cent, close to the highs achieved in the early days of Lite and reversing its 2003 decline.

Its market share is now 9 per cent, up by half, with listeners now staying with the station for an average of an hour and 55 minutes a day.

While Q102 is supposed to be targeting over-35s, it has doubled its share among 15-to-34-year-olds, to 10 per cent.

Most dramatically of all, music station Spin FM almost doubled its listenership to 9 per cent. It is now second after FM104 in the 15-to-24-year-old age group. Worryingly for the competition, it's the biggest Dublin station at night for under-34s.

Some media buyers believe Spin has taken share from 98FMwhich lost 35,000 listeners in the youth audience.

However, Tom Wright, the station's chief executive, said he believed his main battle was with FM104 and Q102.

"There's a perception out there that we're all about dance music, but it's a bit of a misconception," he said.

Wright attributed Spin's success to "continual music re-assessment and clever, direct marketing''.

In the second half of last year, Spin was into double figures on reach, at 10 per cent of adults.

"This is one of the most dramatic books of recent years," said Dave Harland, chief executive of Initiative Media.

"Effectively, Spin is challenging all media planners and advertisers to reappraise the structure of their Dublin radio plans."

In the south-east, Beat boosted its listenership to 19 per cent, for a market share of 8 per cent. Kieran McGeary, chief executive of Beat, said six-month figures showed the station with reach of 20 per cent, which is close to 2FM's 23 per cent.

"We're already beating 2FMin our core target market of 15-to-34-year-olds and these six-month figures show that we're now on target to overtake them in the all-adults demographic," he said.

At Today FM, Ian Dempsey's apparent share collapse was unfairly reported in some circles. Dempsey's show is shorter now, so direct comparisons of his listenership are not possible. In fact, the average per quarter hour listenership on his show was up 3,000 at 83,000.

On this comparative basis, however, Ray D'Arcy has been the big winner. His profile has been boosted by his TV appearances and he is now attracting an average quarter hour listenership of 113,000, a huge leap from 88,000. He is now eclipsing Dempsey as the commercial station's biggest draw.

It was a poor book for Matt Cooper, whose efforts at the Last Word slot are still faltering. Year-on-year his reach is down 4,000, which is seen in the industry as a disappointing result.

Overall, Today FM will be pleased to have significantly boosted its Cork listenership in particular, after making a determined effort in the region in the past year.

Cork remained a competitive place for radio, with 96FM remaining dominant but continuing to lose some ground, as did RedFM. RTE 1 and 2FM also gained listeners in the area.

We're a non-profit that produces a national award-winning radio program featuring high-quality traditional and contemporary folk, bluegrass, swing, jazz and similar genres.

We have just completed a new stand-alone studio to teach children (and adults) about folk music and radio.  The studio is separate from the radio station and, as such, we do not have easy access to the station's music library.  We receive 500 to 1,000 visitors per day and have a great opportunity to expose people to folk!

Although we receive CDs from major labels, we need to build our back catalog and are eager to acquire existing folk/bluegrass/swing/jazz CD libraries through purchase or donation (we are a tax deductible non-profit.  For more information about us, see www.slbradio.com.

If you are looking for a good home for a collection of anywhere from 10 to 1,000 CDs, please contact me off list as below.  Please feel free to forward this to any party you feel may be interested.

Finally, if you are an indie or with a CD label in an appropriate genre, please feel free to contact us or add us to your promotional list.  We are serious about folk music, post our playlists in detail, are a Sing Out! radio partner, and ASCAP/BMI/SESAC member.  Thanks.

WPFB AM & FM  in Middletown, Ohio was owned by Paul F Bradeon, and
another station he owned was WPBF so it is rather obvious he used his
initials.

Just an update to RadioDaddy.com's progress.  Since beginning in November
2004, we've grown to over 500 members!  The site is receiving more than two
million hits per month!

What is RadioDaddy.com? It's a free voiceover exchange service for your station. It's staffed by volunteers and supported by donations. Need a voiceover, jingle, etc for your station? Like to get the word out about your station? Want to break into the world of Voiceovers? http://www.RadioDaddy.com is the place to do it. We are now offering free logo's for your station! We added a free daily news service and even have an on staff meteoroligist who will do free personalized newscasts for your station.

If you haven't checked RadioDaddy out in awhile, you really should now - I think you'll find this free service very usefull for your station.

DRM live at Le Radio! Conference in Paris, February 6-9

>From February 6th through 9th, Le Radio! participants will have the opportunity to hear Digital Radio Mondiale (DRM) broadcasts on mediumwave and shortwave on existing consumer and software receivers at the DRM stand in the Paris Expo. DRM`s European commercial launch will take place later

this year.

"France is a key market for DRM, and DRM is a key digital solution for AM in France," says Michel Penneroux of TDF, DRM`s Commercial Committee Chairman...

> I have both and my impression is exactly the opposite of yours. I find the XM channels are all AOR, All Over The Road. You can hear good music on XM if you punch enough buttons. They do have a pattern of playing really obscure music on many channels. Sirius has more channels you can turn on and just leave it there.

I tried leaving Sirius on but it felt so much like regular FM..

Don't bother posting the Hot 97 thread here unless you plan on toning it down a lot. As someone who has been Jewish all his life, your comparison of Emmis/Hot 97 to Josef Goebbels angers me. The Nazis killed millions of people (not just Jews, either). While what the offending DJs did was nowhere near OK, your characterization is over the top, outrageous and completely disgusting.

I'd email this to you, but you chose to munge your email address (wonder why...?)

For those who have no clue what I'm talking about, a similar thread was posted and replied to in alt.cellular.sprintpcs, because this person was complaining that Sprint PCS knew what was happening and condoned it by continuing to advertise on WQHT (which is not likely to be the case.) You should be able to find it on Google Groups pretty easily.

To the person attempting to post this crap: if you do not wish to discuss this matter on Usenet, you are welcome to email me personally.

>From Media Week
```

Ofcom has opened the bidding for the largest new FM licence to be advertised since the media regulator came into force in 2003.

Radio groups have been invited to bid for the lucrative Solent licence, which will cover Southampton, Portsmouth, the Isle of Wight and West Sussex and is expected to have the potential for around 1.25 million adult listeners.

The new licence will overtake the recently awarded Edinburgh licence (900,000 potential listeners) as the largest new FM station made available since Ofcom pledged to open up the radio market with a raft of new licences.

Kelvin MacKenzie's Wireless Group came out on top with a talk radio station during the fiercely fought battle for the Edinburgh licence.

Meanwhile, an FM licence for the Torbay area has also been advertised by Ofcom today.

The station is expected to have a potential adult audience of around 200,000, a figure similar to that of existing station, GWR-owned Gemini 96.4 FM.

The deadline for applications for the licences is 5 May.

Because AOL's raison d'etre has always been content, content, content. Why do you think they're offering AOL for Broadband? They're not now, and never have been, simply an access provider.

It's the same reason Verizon's partnered with MSN and SBC with Yahoo for their respective DSL services. MSN and Yahoo are premium content providers.

Plus, the OP may have started on AOL and may have wanted to keep his screen names and/or some of the other features specific to AOL's setup.

# Analysis: Progressive talk radio grows

By Pat Nason
UPI Hollywood Reporter

Los Angeles, CA, Feb. 3 (UPI) -- Talk radio, for years regarded as something of a home field for conservative politics in America, is making more room for liberal politics with a rapid expansion of the progressive-talk format.

The talk-radio format has been around since at least the 1960s, but it came into its own as a dominant cultural and political force during the '90s, when Rush Limbaugh cultivated a nationwide audience in syndication estimated at more than 20 million listeners each week. Limbaugh was among the first talk-show hosts to rise to prominence following the demise of the Fairness Doctrine in 1985.

The Federal Communications Commission had required broadcasters to provide equal time for rival points of view on controversial issues of public importance and to actively engage in coverage of such issues. Unfettered by such requirements, talk radio turned into something of a "rock 'em-sock 'em" free-for-all -- with the strongest personalities reaching the higher rungs of commercial success.

Limbaugh's influence was such that after the Republicans won control of Congress in 1994, party leaders named him an honorary member of Congress.

With a few notable exceptions -- such as talk-show host Michael Jackson in Los Angeles -- it seemed as though talk radio was thoroughly conservative. But Michael Harrison, publisher of the industry magazine

Talkers, told United Press International that's a persistent myth about liberal talk radio.

"It's always been around," he said. "Another myth is that liberal talk radio doesn't work."

Harrison said the recent expansion of liberal talk radio -- which most practitioners of the format prefer to call progressive talk -- provides a good illustration of why talk radio in general is such a hardy perennial among radio formats.

"Talk radio works best when it challenges authority," he said. "It works best when people feel that no one else is talking to them quite this way."

Companies such as Air America and Democracy Radio are enjoying market success with such talk-show hosts as Al Franken, Ed Schultz, Randi Rhodes and Janeane Garofalo. Clear Channel Radio has moved into the progressive-talk arena, with three of its stations -- in Cincinnati, Detroit and Washington -- switching formats in the past month.

Gabe Hobbs, Clear Channel Radio vice president of programming, news/talk/sports, told United Press International progressive talk is experiencing vigorous growth, largely because the recent round of the format's expansion took place during the contentious election year of 2004.

"People had a heightened interest in electoral politics," he said, "and we used that opportunity to fill a need and launch a new format."

Hobbs said talk stations typically take 18 months to two years to become established, but progressive talk is connecting considerably faster for Clear Channel.

"Our stations are getting there in 30 to 90 days," he said. "That's remarkable considering most of the talent, no one knows who they are."

Franken -- the top star in Air America's lineup -- is probably the closest thing to a household name among progressive-talk hosts currently on the air. He is an Emmy-winning writer and comedian, and his profile in the talk-radio world also benefits from his notoriety as the author of the best-selling book "Rush Limbaugh Is a Big Fat Idiot."

After a shaky startup in 2004, when there were reports that the company was having serious capitalization problems, Air America is now on 50 U.S. radio stations. Since most of its affiliates did not come on board until the fall, Air America president Jon Sinton told UPI there isn't much to report in the way of ratings history -- but he said several stations have increased their audiences with the new format.

For example, he said KPOJ in Portland, Ore., is the No. 4 station overall among listeners age 25-54.

"People will tell you it's the 'People's Republic of Portland,'" he said -- referring to a perception that the area is a liberal stronghold. "But then we signed on in San Diego, which has a reputation of being the most conservative radio market in the country -- and I think in the first or second month that we put the format on KLSD, the station was No. 1 in the market among listeners age 25-54."

Sinton said the numbers have settled back somewhat since then, but he said the station is still "a big hit."

Harrison said the ratings for progressive talk indicate that the format is headed in a positive direction.

"This early in Limbaugh's career," said Harrison, "he was considered to be not even a blip on the radar."

Harrison and Hobbs both pointed out that the current expansion of liberal talk radio is most likely a product of the cyclical nature of programming.

"Just like in music radio, we see certain types of music rise and fall and rise and fall," said Hobbs. "I just hope this isn't the disco of talk radio."

Will progressive talk grow to the point that it could rival conservative talk's political and cultural influence?

"That would be nice -- I'd settle for leveling the playing field," said Sinton. "If you get some staying power, we hope that over time we can balance the discussion, and I think democracy requires that balance."

Actually they are still on shortwave... and have been.

>With the rollout of AOL version 9.0 you can't even read this newsgroup or
>any other unless you use the old method, ala the AOL version 1

Huh?? I have been on AOL since 1992 through all versions, and have never had a problem. I now have 9.0Security Edition and it works just as smoothly as always.

Neither my DSL provider in Vermont nor in Florida provide any sort of reader...but I will now try Mozilla and Google.

I haven't found a better way than AOL for organizing all the varied things I do online in one place. We travel alot, and the AOL Travel Boards can't be beat for advice and info. They are accessable only within AOL. Instantly accessing my portfolio with a rollover drop down menu is very quick and simple. Having IM's and email right in front of me while doing myriad other things online also counts for something.

Dealing with e-mail with either of my DSL services is painful...and with clunky add-on spam filters. AOL mail is easy to use and I'm amazed how good the new spam filtering actually works.

All this said...with AOL eliminating a simple way to organize my dozen newsgroups...and now dumbing down the travel boards, I am lookin for an alternative as soon as my annual subscrition runs out. I'm experimenting with FireFox, and am open to recommendations.

Thanks for listening...

Bob

Yes, you are fortunate.  Around my area the non-coms are either multiple NPRs duplicating the same programs aiming for maximum ratings/income, religious stations, or a very political station.  We are about to lose the last partly-classical non-com within 25 miles of me.  That will leave us with only a (very) commerical classical station "... exerpts from the third movement of ..."  in order to have room for the drive-time spot load.

I'm very happy with my XM channels and paying for Sirius to hire Stern would be a big negative to me.

The Associated Press
02.05.05

Knoxville, Tenn. - After warnings, inspections and finally a raid, 90.9 FM is silent.

Knoxville First Amendment Radio, or KFAR, was an unapologetic voice of unlicensed "pirate radio" activism, freewheeling conversation, alternative news and music since 2001.

But Federal Communications Commission agents and U.S. marshals emptied the station's graffiti-decorated trailer - a former crack house on a hilltop near the University of Tennessee - of radio gear Sept. 14. A poster of Che Guevara, the Cuban revolutionary, remains on a control room wall.

"Arrrgh! .... ye scoundrels!" flashed the message board on the station's Web site.

"All the FCC did was protect Knoxvillians' right to listen to static. You go there now, and it is nothing," supporter Chris Irwin said of the void on the FM dial once occupied by 100-watt KFAR. "What exactly was the public benefit of crushing this station with less power than a light bulb?"

Two weeks later, Free Radio Santa Cruz in California was raided after operating for nearly 10 years without a license. The FCC shut down 250 pirate radio stations of all kinds in 2004, up from 211 the year before. San Francisco Liberation Radio and tiny Radio Free Brattleboro in Vermont, both raided in 2003, continue to wage federal court battles to stay on the air.

The closings come even as the FCC considers allowing more low-power FM licenses for community radio.

Of some 3,200 applications submitted during very brief filing periods in 2000 and 2001, about 1,100 have been granted construction permits, about 260 applications are still pending, and more than 300 stations have been licensed.

"I fully support the mission of the hundreds of LPFM providers throughout the country," FCC Chairman Michael Powell said in a statement. "Low-power FM stations offer a unique opportunity to serve citizens through noncommercial community-based stations, stations that allow small communal and parochial interests to find a voice."

But KFAR never applied for a license. The loose-knit collection of about 50 mostly college-age disc jockeys kept KFAR going on $10-a-month dues. They used on-air pseudonyms like Black-Eyed Susan and Dingo Dog Dave to avoid fines.

"Originally, we were going to apply for a license. We had a nonprofit. We had a board. We were filling out the paperwork," said Irwin, a law student at Tennessee.

But after the FCC opened the door to low-power FM licenses in 2000, Congress adopted restrictions urged by traditional broadcasters. The National Association of Broadcasters and National Public Radio wanted to ensure the signals of the new little stations didn't interfere with big existing ones. So under a so-called "third adjacent channel" rule, no new station could be closer than three positions on the dial from an existing station.

"Basically it made it so that really low-power stations could only operate in very rural areas where there weren't listeners, so they wouldn't cut into any major markets," said Dylan Wrynn, otherwise known as Pete triDish, a former radio pirate now with the Prometheus Radio Project in Philadelphia, which advises community radio startups.

"Maybe they could have gotten a low-power station, but it is really pretty dubious," Wrynn said of KFAR. "There are about a dozen ways they could have been stopped from doing it legally through really no fault of their own."

The Knoxville market isn't huge. It ranked 71st-largest in the country in the latest Arbitron ratings with a population of 620,000. But with 21 FM stations on the air, the dial apparently was full under the third-channel adjacency standard.

So in late 2001 KFAR started broadcasting anyway as an act of civil disobedience.

Two years later, an independent study commissioned by the FCC for Congress concluded the third-channel rule was overreaching.

The FCC proposed going back to its original plan of requiring separation by only two clicks on the FM dial instead of three - a standard that could allow hundreds of additional stations.

Legislation to make the change, sponsored by Sens. John McCain, R-Ariz., and Patrick Leahy, D-Vt., stalled in the Senate last fall.
Tim Berry, chief engineer for five Knoxville radio stations once owned locally but sold to Citadel Broadcasting Corp. of Las Vegas in 2000, has no

sympathy for KFAR, even though the pirate station never interfered with his stations' signals.

"If you dance to the music, eventually you are going to have to pay the fiddler. If you fire up a radio station illegally without a license, eventually the commission is going to shut you down," he said.

"If the (McCain-Leahy) legislation were passed ... yes, I believe there would be some more (stations) that would be eligible," Berry said, but noted, "There already are some low-power FMs on, and they did so legally. They didn't fire up and get mad when they got shut down."

The FCC closed KFAR on a complaint from the FBI.

Special Agent R. Joe Clark, who heads the FBI's Knoxville office, sent the FCC a letter about KFAR in January 2004. The FBI refused to release Clark's letter to the Associated Press without a formal Freedom of Information Act request to Washington.
Knoxville FBI spokesman Gary Kidder said Clark was only passing on a tip to the appropriate agency from the FBI's local Joint Terrorism Task Force.

David Icove, a former FBI Academy instructor now working for the Tennessee Valley Authority's police agency, is a member of the task force. He played a small role in the KFAR probe. Icove listened to the radio in April and June to confirm that KFAR was still on the air after FCC warnings, according to an affidavit from FCC investigator Eric Rice.

But the FCC complaint simply says the station was closed for being unlicensed after it was warned and tests determined the station was transmitting at 5,935 times the allowable limit. Its signal could be picked up from more than five miles away, the FCC said. A licensed low-power FM station typically reaches about 3.5 miles.

Since the shutdown, KFAR has continued an abbreviated broadcast on the Internet under a new name, Community Radio of Knoxville, or CRoK, and looks for other opportunities.

"KFAR is going to continue to survive as an idea," Irwin said, "until we can figure out some way of getting the people of Knoxville access to what belongs to them - our airwaves."

American businessman Mike Spenser, who earlier this year moved from Great Britain to one of the islands in the �land archipelago in the Baltic, will not be granted permission to run his "Pirate Radio Productions" company. The reason is his avowed inability to speak and write Swedish, which is a sine qua non requirement for anyone wishing to pursue business on the islands, says the Provincial government of �land when explaining why they turned down his application.

News reports at
http://www.tidningen.aland.net/se/nyhet.asp?newsID=4760
and also at http://www.radiotv.aland.fi/news.pbs?&news[show_news]=1668&news[instance]=32

Spenser�s visa expires at the end of May. The future of his 756 pirate venture is now uncertain.

(Henrik Klemetz, DXLD)

Harry, M1BYT writes:

"The intention of the event is to set up amateur radio special event stations at as many of the museums as possible throughout the whole of the world. I would hope for an HF, VHF, and if at all possible, a Ui-View (APRS) packet station to be set up at each museum site, but the scope of your station is entirely up to you. The choice of museum is also left very much up to you, however aim for the largest and/or most unusual you can find.

During the first 'International Museums Event 2002' over 80 museums from all over the world took part. The museums varied from tiny local village museums manned by a single lone operator, to some of the worlds most prestigious ones. These were accompanied by a great number of military museum sites, such as HMS Belfast in London, the Battleship New Jersey in the US, RAF museums as well as very many non-military types (see the Museums List).

The event proved to be extremely popular and well supported special event particularly amongst the UK radio amateur population. It also went down very well at the museums which were used as the venues for the event, and invitations have again been extended for 2005. It was a tremendous public relations exercise, as well as all of us having lots of fun over the weekend.

At least part of the intention for this event, will be to present modern amateur radio to members of the public and to help us loose some of the stuffy anorak image. What better place to do this than in the very public and well visited areas of the many museums which can be found in most parts of the world?

Those clubs and museums which do decide to take part, should please use the free on-site 'Registration' facility (button below). The 'Registration' is simply to assist us in administration of the event and provide those taking part with an indication of how many and exactly where the museums taking part are located.

This event is being organised by myself, Harry M1BYT, at Garforth, W. Yorks, UK, and the help and assistance of several local amateur radio clubs."

>Not true? You'll have to show me, without me having to risk hundreds of dollars to find out.<

The point is not how many or how few companies control satellite radio.  The point is that it's run under a different business model, and therefore can afford to air formats that OTA radio has had to abandon because they can't, for whatever reason, sell them.  Better still, the music channels don't hew to someone's idea of hooks played in auditorium tests.  Playlists are far deeper than OTA radio could ever hope to be.  If your complaint against OTA music formats is "how come we never hear this, this or that anymore?", satellite radio likely does let you hear it.

Best example:  If you're over 54, OTA radio presumes you listen to conservative talk.  That is literally the only format sold to advertisers targeting the 55+ demo.  I don't know the channel lineup for Sirius, but XM has probably a dozen and a half channels that easily appeal to the 55+ folks, just on the music side. When was the last time you heard an OTA radio station playing 1940's music, movie soundtracks, show tunes, American standards, world music or African music, outside of a few eclectic shows below 92 MHz on the FM dial?

And if diversity really bothers you, look at the non-music side. Fox News, CNN, Headline News, ABC News & Talk, CNBC, Bloomberg, MSNBC, BBC World Service, C-SPAN Radio, XM Public Radio, America Right, America Left. News from every conceivable place on the political spectrum.

It's no wonder that companies invested in OTA radio are worried, and well they should be. Satellite radio may never reach the critical mass necessary to make a serious dent in the audience OTA radio has (and if they do, it will probably take over a decade at current rates of growth), but the fact that it has them worried at all shows that the public can now see and hear what they're missing.

In all honesty, OTA radio ought to have bigger worries from a whole other source. I saw a recent article in Advertising Age, saying that broadcasters should be much more worried about personal music players. So far, XM has 2.3 million subscribers and Sirius about 1.2 million. However, sales of iPods so far total about 10 million...and I haven't heard so much as a peep from broadcasters about iPods. Some car makers and after-market car stereo vendors are even making plug-in adapters for iPods.

I'd recommend Xnews <http://www.newsguy.com/xnews> over Mozilla, and ANYTHING over Google Grooups..

Does your DSL provider offer an NNTP server?  If not, you may have to go shopping for someone who does.

I'll put in a good word for SuperNews, if you do.

Hello all:

I am tired of Windows and all the crashes, and would like to switch to linux for my station automation. I would like to use XMMS, (a Winamp clone), but was wondering if anyone has written a scheduler program for XMMS that would play flows/liners/etc at given intervals. I saw that someone had done so in some old posts, but they were posted quite a while ago, so I thought I would post a fresh thread instead of digging up a really old one. FWIW, I am fairly computer savvy, I just don't know anything about programming, or I'd do it myself.

Thanks in advance!

Yes, in much of the country, XM is better than regular car radio. But it is still pretty bland and mainstream, 95 percent of the time. I've ditched satellite in favor of INternet radio piped into my stereo. I would use satellite on in a car in a blue state and most red ones too, for that matter.

Kathmandu, Feb 5

Nepal's new government has asked all the private radio stations in the country to stop broadcasting anything other than entertainment programmes.

The government told the vast network of private radio channels not to broadcast news, views, reports and opinions.

The move comes in the wake of King Gyanendra dismissing the Sher Bahadur Deuba government Tuesday, declaring emergency and announcing that "crimes against the nation" committed by the Maoists would be dealt with firmly.

It was not immediately clear if the order also covered public announcements.

The order will leave a void for thousands of listeners who had grown used to their daily doses of news and discussions on current issues as diverse as whether Nepal should hold beauty pageants to the woes of Nepalese workers seeking jobs abroad at the hands of unscrupulous brokers.

However, newly appointed Nepalese Information and Communications Minister Tanka Dhakal has reportedly said communication curbs would be eased soon.

Private radio channels blossomed in Nepal after the government opened the sector to private operators including national as well as regional and community-based stations.

Shops tuned in to radio stations for the latest news, cruising taxis switched on to the FM stations and, during times of unrest created by the Maoist insurgents, people nationwide tuned into their favourite radio stations to find out if there was a curfew, a transport shutdown, a general closure.

Radio Free Colorado - A Successful New Internet Radio Station

NOTE: NEW CONNECTION URL'S GIVEN AT BOTTOM OF MESSAGE!

Radio Free Colorado
What Radio Once Was

Radio Free Colorado, a non-commercial Internet Radio Station, plays a lot of music you probably haven't heard in such a long time and have since forgotten how much you love. It's such a thrill when a forgotten song comes on and you say "Hey, I love this song" and all your fond memories of it come rushing back to you.

Our "Genre" (what kind of music we play) is VERY diverse. We play Modern/Classic Rock, Progressive Rock, Alternative (Modern and Retro), Pop, Billboard Classics, and Top Radio Hits from the 60's, 70's, 80's and 90's. We also play some Ambient/Instrumentals. No Rap or Hip-Hop, Classical, Jazz or Swing.

Radio Free Colorado streams music LIVE over the Internet using a high-fidelity 128 kbps MP3 stream. We use professional sound processing equipment to achieve a sound quality which we believe is superior to virtually all other 128 kbps streams.

Any computer with a DSL, Cable Modem (or faster) Internet connection that has a download speed capacity of at least 128 kbps can tune in.

Virtually all MP3 music players are capable of receiving live MP3 music streams over the Internet. Any music player compatible with streaming MP3 audio can receive Radio Free Colorado's broadcast.

Our MP3 broadcast stream is compatible with virtually all music software programs and works with PC's running Windows, Apple computers running OS X and other machines running Linux or Unix.

Radio Free Colorado is NOT beholden to anyone. There is no pre-approved "playlist", no one tells us what we can't play. Listeners can, however make song requests and if we have it we will play it.

Radio Free Colorado - Sample of Songs We Play

Go-Go's - Head Over Heels
Dire Straits - Walk of Life
Aimee Mann - Save Me (Acoustic - Recorded Live) - KBCO Studio C - Volume 14
Nena Hagen (Gabriela "Nena" Kerner) - 99 Luftballons (German) - 99 Luftballons
4 Non Blondes - What's Up
Cake - Short Skirt/Long Jacket - Comfort Eagle
Cracker - Euro Trash Girl - Garage d'Or
The Carpenters - Live At The Palladium 1976
Heart - Barracuda - The Essential Heart
Tom Petty & The Heartbreakers - You Don't Know How It Feels - Wildflowers
A Flock Of Seagulls - I Ran (So Far Away) - The Best Of A Flock Of Seagulls
Alphaville - Forever Young (Live) - Forever Young
Heaven 17 - Let Me Go (Original Unedited Version) - CD Single
The Waitresses - Quit - Wasn't Tomorrow Wonderful?
The Jam - Going Underground - The Sound of the Jam
Yaz - Situation (US 12" Mix) - Upstairs At Eric's
Slow Children - Vanessa Vacillating - Best Of Slow Children
Tori Amos - Silent All These Years - Little Earthquakes
Pink Floyd - One Of My Turns - The Wall (Disc 2)
Haysi Fantayzee - Shiny Shiny - Battle Hymns For Children Singing
Aimee Mann - I've Had It (Acoustic - Recorded Live) - Rare On Air, Volume 2: "Morning Becomes Eclectic"
Depeche Mode - Everything Counts (Original Unedited Version) - Depeche Mode
The Police - Don't Stand So Close To Me - Zenyatta Mondatta
Killer Pussy - Teenage Enema Nurses In Bondage - Bikini Wax
The Dead Milkmen - Punk Rock Girl - Death Rides a Pale Cow: The Ultimate Collection
The Vapors - Turning Japanese - Vaporized
Romeo Void - Never Say Never - Warm, In Your Coat
Siouxsie & The Banshees - Christine - The Best of Siouxsie and The Banshees
Echo & The Bunnymen - The Killing Moon (12" Version) - Ballyhoo: The Best Of Echo & The Bunnymen
Gary Numan - Cars - The Pleasure Principle
Berlin - The Metro - Best Of Berlin 1978 to 1988
U2 - Vertigo - How to Dismantle an Atomic Bomb
Peter Gabriel - Don't Give Up (Live) - Secret World Live (Disc 2)
George Harrison - Give Me Love (Give Me Peace On Earth) - The Best Of George Harrison
Where Did You Sleep Last Night - Kurt Cobain w/Nirvana - MTV Unplugged in New York
The Final Cut: A Requiem for the Post War Dream by Roger Waters
Missing Persons - Words - Spring Session M
Martin L. Gore - Compulsion - Counterfeit e.p.
Haircut 100 - Love Plus One (12" Version) - Pelican West
Split Enz - Six Months In A Leaky Boat - History Never Repeats - The Best Of Split Enz
Green Day - American Idiot (Uncut) - American Idiot
Social Distortion - Ball And Chain - Social Distortion

Primal Scream - Movin' on Up - Screamadelica
The Jim Carroll Band - People Who Died - Just Can't Get Enough: New Wave Hits Of The '80's Volume 6
Scala - Creep (Radiohead) - Scala On The Rocks
Led Zeppelin - Living Loving Maid (She's Just A Woman) - Led Zeppelin II
Creedence Clearwater Revival - Down On The Corner - Chronicle, Vol. 1
The Beatles - The Fool On The Hill (Demo) - Anthology 2: Disc 2
Oasis - Don't Look Back In Anger (Live) - MTV Unplugged
The Who - Eminence Front (Live) - Join Together (Disc 2)
Crowded House - Something So Strong (Live) - Recurring Dream: The Very Best of Crowded House
New Radicals - You Get What You Give - Maybe You've Been Brainwashed Too
Billy Joel - She's Got A Way (Live) - Soundboard Recording
Altered Images - I Could Be Happy - (12" Import)
The Bangles - Walk Like An Egyptian - Different Light
B-Movie - Nowhere Girl (Original Unedited Version) - 12" LP
Suzanne Vega - If You Were In My Movie - 99.9 F�
Patti Smith - Dancing Barefoot - Land (1975-2002)
The Clash - Know Your Rights - Combat Rock
David Bowie - Space Oddity - Space Oddity
Primitive Radio Gods - Standing Outside A Broken Phone Booth With Money In My Hand - Rocket
The Pretenders - My City Was Gone - Learning To Crawl
Midnight Oil - Beds Are Burning (12" Version) - 20,000 Watt R.S.L.
Pete Yorn - Life On A Chain - Musicforthemorningafter
Public Image Limited - Rise - Compact Disc
Violent Femmes - Add It Up - Violent Femmes: Deluxe Edition
The Psychedelic Furs - Ghost In You - Mirror Moves
R.E.M. - Radio Free Europe - Murmur
XTC - Dear God - Skylarking
Big Country - In A Big Country - The Crossing
Peter Murphy - Cuts You Up - Deep

These songs are just a partial list of some of the "rarer" songs that not only don't get played on the radio anymore but are hard to find as well. Virtually all of the songs on this sample list have long since been sent to the record company boneyard, which is why we play them. We have over 1,400 songs of all varieties and the list grows every day.

Artist and Song suggestions and requests are gladly accepted! We would like to grow RFC enough to satisfy a variety of tastes yet remain completely non commercial.

iTunes, RealPlayer, Winamp or Audion 3 (Mac only) are recommended for best listening quality.

Here is a list of recommended MP3 software programs you can use to listen to RFC's broadcast. They are all available for free.

iTunes Version 4.7 for Windows or Mac:
http://www.apple.com/itunes/download/

RealPlayer Version 10 for Windows:

http://www.real.com/affiliates/superpass.html?pcode=cj&src=cj

RealPlayer Version 10 for Mac:
http://www.real.com/?src=blackjack

RealPlayer Version 10 for Linux:
http://www.real.com/linux/

Winamp 5.08 from Nullsoft for Windows:
http://www.winamp.com/player/

Note: If you are using an earier version of Winamp, Nullsoft urges you to
update
your software due to several "security flaws" that are fixed in version
5.08.

Audion 3 for Mac:
http://www.panic.com/audion/
Audion is now free of charge. Use the following link to get a free serial
number for registering Audion:
http://www.panic.com/audion/buy.html

XMMS, MPG123, etc. MP3 Players for Linux/Unix or X Windows users:
http://www.uk6x.com/applicationservices/mp3radio.html

The "URL" address (the location on the Internet of Radio Free Colorado's
Broadcast) is:
http://kara.fast-serv.com:8630/

For iTunes use the URL address:
http://kara.fast-serv.com:8630/listen.pls

For RealPlayer use the URL address:
http://kara.fast-serv.com:8630/listen.pls

For Winamp use the URL address:
http://kara.fast-serv.com:8630

For the Audion 3 media player, use the URL address:
http://kara.fast-serv.com:8630

You can find where to type RFC's "URL" address into iTunes under the menu
item "Advanced" - "Open Stream".
For RealPlayer, look under "File" - "Open Location".
For Winamp, look under "File" - "Play URL".

We genuinely welcome Artist and Song suggestions, listener comments, etc.
You may contact Radio Free Colorado by visiting our website at:

http://www.boomspeed.com/garyburke/radiofreecolorado/RadioFreeColorado.html

Radio Free Colorado is protected under Copyright Law.

It is legal for you to listen as long as you don't record. :-)

Best wishes,

Gary Burke
Owner/Operator

I'm not sure if this is the appropriate place to ask, but I have a somewhat technical question. I want to be able to transfer an audio stream (like what I would get from the BBC) into an mp3 file. It seems like it is doable with the right software, but I can't seem to figure out what that might be.
Does anyone have any suggestions?
Thanks, Dan

Greets to all,
does anyone know what the call letters for U100 radio station were? I remember listening to that station backin the 70's and would like more info on them.

Thanks,
Bengal

In article <ctv391$spp$1@xuxa.iecc.com>, kludge@panix.com (Scott Dorsey) writes:

>What is this old method?

The old method was to add "Newsgroups" to your favorites, then either download them or read them one at a time.
With later versions until 9.0, you could automatically download them into your e-mail filing cabinet.  That was taken away with version 9.0

>>Thankfully I can access it through my SBC DSL account.
>
>If you have SBC DSL, why do you even bother with AOL?

Because I have been with AOL since the days of the DOS/GeoWorks days.  I use the them for different things.  AOL is more for personal stuff, and the DSL account is for business purposes.  And because I have SBC DSL,  I was able to get AOL for a chaper monthly price.

The program you want is Total Recorder from HighCriteria.com.
I've been using the standard edition for about a year; I just upgraded
to the professional edition so I can do some cutting and pasting with
the sound clips.

I use TOTAL RECORDER from High Criteria.  Check it out at
http://www.highcriteria.com.
You can even schedule start and end times.

Charlie

Most sound cards let you record what you're listening to, so you just need
any software that creates audio files. GoldWave isn't just "any" software,
but it's what I use for this and a lot more: www.goldwave.com

If you want unattended recording, you need something like Total Recorder:
http://www.highcriteria.com/

XM claimed 3.1 million at the end of 2004.
IIRC, you are correct with the Sirius end-2004 number.

You don't say what platform you are using.

If it's Windows, and your PC uses a 1 GHz processor or better, I'd recommend Replay Radio.  It's what I use; it's like having a Tivo for web radio.  The processor speed issue is all about being able to handle running the app while recording high-bitrate streams;  Replay Radio works quite nicely on my old 300 mHz PII machine to record lower-fi Real Audio streams.

Enough with these idiots.

Every time they get snagged we hear the cries of outrage re suppressed
viewpoints and the trampled First Amendment. But honestly, if you're
driving 65 through a school zone, you deserve a ticket even if you were on
your way to feed the homeless.

There is a process to putting a station on the air, and getting a license
is part of that process. Everything else - the lack of diversity on the
airwaves, corporate ownership of media, rights of free speech, blah blah
blah - is immaterial.

Here's what most pirate radio is: political diatribes from the far fringes,
music few people ever needed to hear again, shoutouts to buddies, and
buzzes, hiss, hum and dead air, presided over by the least capable air
"talent" ever to disgrace a microphone. There's a good reason these
self-deluded crusaders couldn't cut it in the world of professional
broadcasting - they suck, and so does their programming.

I think the most recent incarnation of the FCC has overstepped its bounds
by becoming the enforcement wing of those who want to beat America silly
with their Bibles; nonetheless, I still believe imposing technical
requirements and order on our broadcasting bands remain valuable functions
of the Bureau.

Someone please give these guys 100 kHz of the shortwave spectrum so they
can play radio and impress one another.

Al Q.
NY

Would like to translate a 50,000 watt Earth station located aprox 55 miles from the home qth. I think it would put me at about 15dbu contour. Anyways before I ramble on, Does or has anyone operate/operated their own translator? Any experience would be helpful.

I agree. But I think that stuff _should_ be available on the airwaves as a public service. I think that if someone wants to go on the air with a station that broadcasts Mahler symphonies 24 hours a day, and they can show they won't impinge on the contours of other stations, that the FCC should grant them a license.

The problems today involve the licensing procedure being much too complex for small noncommercial stations, and the number of stations already on the air (often with the same programming) crowding the bands.

>I think the most recent incarnation of the FCC has overstepped its bounds
>by becoming the enforcement wing of those who want to beat America silly

Sadly, I agree. But personally I think they should spend some time getting Part 15 enforced, and dealing with the fact that most of the current radio broadcasters are not performing much of a public service but are instead just playing whatever comes over the bird.

>Someone please give these guys 100 kHz of the shortwave spectrum so they
>can play radio and impress one another.

How about making the 87.9 MHz "Channel 200" available for them? Have a very easy to get special event license, that is good for one year and needs to be renewed. This is much like what is done in some European countries now.

And, how about refusing renewals to some of the stations that just broadcast satellite-originated pap that is identical to that of a dozen other stations in their market?

This was a disaster for the channel 6's affected. It's taken years of reallocating the stations licenced to fix it, once the genie got out of the bottle. And that was in the hands of ostensibly competent engineering talent....do you really think that LPFMs would be as likely to have such skills?

If people don't think it's a public service, they will turn it off;
we call this "competition".  Who else but the listeners will determine
if a "public service" is being rendered?  You?

>From Corey Deitz,
Your Guide to Radio.

9 February 2005

XM Satellite Radio is kicking off the 2005 NASCAR season this week with live, comprehensive coverage on NASCAR Radio (XM Channel 144) and a host of special events for NASCAR fans at the Daytona International Speedway in Daytona Beach, Florida.

XM, the exclusive satellite radio service of NASCAR, will air more than 100 hours of live and first-run broadcasts during the season-opening NASCAR Speedweeks in Daytona Beach, starting February 12 with the Budweiser Shootout and culminating on February 20 with the 47th annual Daytona 500.

NASCAR Radio's Claire B. Lang will host her three-hour daily "Dialed In" program (4-7 p.m. ET) live from Daytona during Speedweeks, giving listeners inside interviews with NASCAR drivers and personalities.

NASCAR Radio on XM broadcasts every NASCAR race in all three national racing series. NASCAR Radio 2 (XM Channel 145) broadcasts the live communications between drivers and their teams during the races. NASCAR Radio and NASCAR Radio 2 will air the full slate of races from Daytona International Speedway (all times Eastern):

February 12: Budweiser Shootout, NASCAR NEXTEL Cup Series, 8 p.m.
February 17: Gatorade Duel, NASCAR NEXTEL Cup Series, 1 p.m.
February 18: Florida Dodge Dealers 250, NASCAR Craftsman Truck Series, 8 p.m.
February 19: Hershey's TAKE 5 300, NASCAR Busch Series, 1 p.m.
February 20: Daytona 500, NASCAR NEXTEL Cup Series, 1 p.m.

My suspicion is that with the coming of HDTV that this will be much less
of an issue.  But I do agree with the technical concerns.

Radio Taiwan International, which formerly was used to broadcast government propaganda aimed at China, is to offer programs in five foreign languages
By Ko Shu-ling

Thursday, Feb 10, 2005

"With the increasing number of international marriages, what we're doing now is broadcasting not only to foreigners working or living here but also to the future children of Taiwan."

National radio station Radio Taiwan International (RTI) is poised to enter a new era on July 1 when it starts domestic broadcasting in five foreign languages to the nation's 500,000 foreign workers and residents.

Over the course of 77 years, RTI has transformed itself from a government propaganda radio station targeting China and the world, to a public service station serving both local and international communities alike.

While some might question the popularity of radio stations in a multimedia age, Cheryl Lai, president of RTI, seemed upbeat about the future of the airwaves industry.

"There are three English-language newspapers in Taiwan but their target audiences are either white-collar office workers or intellectuals," she said. "We're more concerned about the blue-collar audiences, especially foreign workers and spouses, who have a hard time understanding Mandarin and some of them cannot even afford computers or Internet access," she said.

Lai added that foreign-language radio programs also provide foreigners with access to instant and immediate information, which can be quite useful, especially when natural disasters hit.

"With the increasing number of international marriages, what we're doing now is broadcasting not only to foreigners working or living here but also to the future children of Taiwan," she said.

Established in 1928 in Nanking, China, under the name the Central Broadcasting System, RTI was relocated to Taiwan after the Nationalist Party lost the civil war to the Communists in 1949.

In January 1998, the station was restructured to become a non-profit organization, and its services were expanded.

Currently, it has nine branch stations scattered island-wide. Its broadcasting area covers central and southern Taiwan, China and the rest of the world.

It broadcasts daily in 18 languages, including Mandarin, Taiwanese, Hakka, Cantonese, Tibetan, Mongolian, English, German, French, Russian, Spanish, Arabic, Japanese, Korean, Vietnamese, Thai, Indonesian and Burmese.

>From July 1, it will start broadcasting in five foreign languages aimed at local audiences nationwide and foreign communities, taking into account the increasing number of foreign workers and spouses. The five languages are English, Japanese, Indonesian, Vietnamese and Thai.

Statistics show that there were about 330,000 foreign spouses and 310,000 foreign workers in Taiwan as of December last year. Of the foreign husbands, Thais are the most numerous, accounting for 34 percent of the total, followed by Japanese, at 12 percent, and Americans at 11 percent. Vietnamese top the list of foreign brides with nearly 70 percent of the total, followed by Indonesians at 12 percent and Thais at 6 percent.

Unlike other countries' national radio broadcasters, such as the British Broadcasting Corporation (BBC) or Voice of America, which target both international and domestic audiences, Taiwan does not have a single national public radio station serving both the national audience and the international community.

So far, the only public radio stations targeting local audiences nationwide are the National Education Radio, Police Radio System and the Voice of Han Broadcasting Network.

As the government's airwave restructuring plan is due to be implemented on July 1, Voice of Han will move to another frequency to make room for RTI to broadcast 12 hours of foreign-language programs. The programs will be also be available online.

Altogether, the channel will offer programs in eight languages. While RTI will offer programs in five foreign languages, Voice of Han will offer programs in three languages: Mandarin, Taiwanese and Hakka.

Under the government's restructuring plan, specialized public radio stations such as the Police Radio Station, the National Education Radio and the Voice of Han Broadcasting Network will be consolidated into one public broadcasting group.

The group, along with other public radio stations, will operate in frequencies between 104.4 and 108. They will provide four different services nationwide, including public services (transportation, weather, disaster relief, etc.), multi-functional services (Hakka, Aborigines, foreign brides, foreign laborers, armed forces and language programs), and culture and education services.
Apart from government propaganda, RTI's five foreign-language programs will be mainly service-oriented.

A recent survey polling RTI audiences found that foreign listeners most desperately want to know what's going on in their home countries. They are also eager to know what happens here in Taiwan and what Taiwan's government and Taiwanese people are up to.

Making a difference

Maria Chen, host of RTI's Indonesian-language program for the past seven years, said that she vividly recalled some of her listeners' stories.

"I remember one of my audience members told me that she was very happy to have accidentally tuned into my program and that she had become happier and happier after listening to my program," she said. "Listening to the radio is one of the few pastimes she can enjoy, she told me, because she is only allowed to have one day off per week."

Chen's audience is mainly made up of homecare workers who take care of the elderly and the sick.

Another of her listeners told her that she was very surprised to find out that she could eat at the same table as her employer, because in Indonesia domestic maids are not allowed to do so.

"I'm so glad that my program can make a difference," she said.

Tao Yun-sheng's audience, meanwhile, is mainly made up of Thai workers, most of whom are in the construction business.

While Thai workers used to have the highest rate of job desertion, Tao said he has come up with an innovative idea to help solve the problem.

"I give away free telephone cards to absconders so they can call in to my program and tell me their personal stories," he said. "Now Thai workers have the lowest rate of running away from their jobs."

According to Tao, Thai listeners are most interested in news about their fellow workers and Taiwan.

Tao also appealed to the government to erect monuments for Thai workers who have lost their lives doing construction work. According to him, over 50 Thai workers died during the building of the Northern Second Freeway, 12 during the construction of the Taipei-Ilan freeway and two while working on the Taipei 101 skyscraper.

However, not a single monument has ever been erected in memory of their sacrifices and contributions.

Feb. 10, 2005

International Launch Services (ILS) and Eutelsat S.A. have signed a contract for the launch of a future Eutelsat satellite mission.

The contract was negotiated and signed in the framework of Eutelsat's strategy of contracting with different suppliers of satellites and launch services in order to ensure timely delivery of replacement capacity in orbit at its HOT BIRD(TM) video neighborhood.

The launch is scheduled for the first quarter of 2006. The mission will use the powerful Proton/Breeze M launch vehicle configuration.

The Proton is built by Khrunichev State Research and Production Space Center of Russia, which is partnered with Lockheed Martin (NYSE: LMT) of the United States in the ILS joint venture.

ILS President Mark Albrecht said: "Eutelsat is a long-time and valued customer, which has repeatedly demonstrated its confidence in both ILS vehicles, Proton and Atlas. We pride ourselves in offering the world's two most reliable rockets. In addition, we are familiar with the candidate satellite models, so our vehicles can accommodate whichever payload is finally designated by Eutelsat.

"We look forward to another successful mission with Eutelsat at the beginning of 2006," Albrecht said.

This will be the eighth Eutelsat launch on an ILS vehicle, and the company's second on an ILS Proton. Eutelsat, one of the world's leading satellite operators, has launched six times successfully on ILS' Lockheed Martin-built Atlas rocket. Three of those missions were the inaugural flights of Atlas variants -- Atlas II, Atlas III and Atlas V.

Giuliano Berretta, Eutelsat's CEO, said: "It is important for our company's business plan to bring new HOT BIRD capacity into service in early 2006 in order to enhance security of our satellite system and to replace HOT BIRD 1. We are pleased with the substantial flexibility ILS offers us, and we count on another good flight."

ILS is the global leader in launch services. With a remarkable launch rate of 72 missions since 2000, the Atlas and Proton launch vehicles have consistently demonstrated the reliability and flexibility that have made them preferred choice among satellite operators worldwide. Since the beginning of 2003, ILS has signed more new commercial contracts than all of its competitors combined. ILS was formed in 1995, and is based in McLean, Va., a suburb of Washington, D.C. www.ilslaunch.com

With capacity commercialized on 23 satellites that provide coverage from North and South America to Far East Asia, Eutelsat is one of the world's three leading satellite operators. Its satellites are used for broadcasting more than 1,500 television and 800 radio stations to 120 million cable and satellite homes, for TV contribution services, corporate network solutions, positioning and communications solutions for mobile users, Internet backbone connections and broadband access for terrestrial, maritime and in-flight applications.

Eutelsat has developed a range of turnkey broadband products for local communities, corporates, SoHos and consumers. Its broadband subsidiary Skylogic markets and operates services through multimedia platforms in France and Italy that serve sites in Europe, Africa, Asia and the Americas. Headquartered in Paris, and with staff of 450 commercial, technical and operational experts from 25 countries, Eutelsat generated turnover of EUR760 million for the 2003/2004 financial year. www.eutelsat.com

"An amazing line-up of artists, celebrities and presenters supported UK Radio Aid and you can listen to an exclusive 10 minute review of the day in our edited highlights for just �1.50. Download it now at http://www.ukradioaid.com/.

We were privileged to have some of the world's most talented musicians play live sets on the day itself. If you missed these performances or would simply love to hear them in all their glory again, you can download them for keeps for a donation of just �1.50 each.

All proceeds from these downloads will go directly to the Tsunami Appeal."

The current total raised through UK Radio Aid is put at �3,286,700 with a new target of �4 million wanted for victims of the Asian Tsunami.

On Monday 17th January 2005 commercial Radio stations across the UK banded together to broadcast a unique 12 hour programme, to raise much needed funds.

UK Radio Aid played out across the network from 6am to 6pm, with over 280 Commercial stations, plus hospital radio, many overseas stations and BFBS participating.

Technically this very complex project worked brilliantly, with links to local stations twice an hour to play in local UK Radio Aid material for their areas. The main station was switching live to the disaster area and all round the country for local stories to be part of the main content. On top of that we had live telephone interviews with many stars who were abroad - for example Sting in Japan and Bono in LA.

Support for UK Radio Aid by commercial sponsors was magnificent. Donations by sponsors totalled over �500,000 and the income from the competition prizes they donated was over �800,000. The 500,000 competition entry texts underline how listeners interact with their live radio station.  The main sponsors of the day were:

Lloyds TSB, Toyota, Carphone Warehouse, Abbey, Robinsons and Renault
Mark Story, Chairman of UK Radio Aid said:

"This important fund-raising effort wouldn't have been nearly so successful without the generous support from the key sponsors of UK Radio Aid." The Commercial Radio companies themselves have donated over �300,000.

But this update on UK Radio Aid is not to give ourselves a pat on the back - we want to get to �4 million. You can help by going to the UK Radio Aid website and donating online right now, simply click on the link below. Every penny is to be routed to the DEC to be invested in second stage projects to focus mainly on children and orphans of the disaster.

The secondary service area of most Class I-A stations, such as WFAN, was limited to the local noise floor, until some of these stations were broken down by the clear channel decision in the 1960s (affected 13 of the Eastern U.S. Class I-A stations, and none of the remaning U.S. Class I-A clears), and until the "Rio" treaty (affected the remaining Class I-A clears, of whatever country).

After the clear channel decision, the secondary service area of those affected Class I-A clears was about 1,500 miles, or more.

After "Rio", is was about 1,000 miles.

Now, it is much less, sometimes no more than 700 miles at best, and perhaps much, much less at worst.

Barnard pulls that shit everytime his contract comes up for renewal.
In 1989 and 1994, he was "seen" walking into the WCCO-AM building, and
it was rumored that he might jump to that station as Steve Cannon's
replacement.

Accoring to the information I have, Barnard renewed his contract with
KQRS to the tune of $9 million in a 10-year deal. Not bad for Twin
Cities radio ... and a non-syndicated morning show.

I missed something somehow.  African-Americans did not in general vote
for Bush even in the states where Bush got the most African-American
votes.  Most of the African-American community seems to view Bush as a
horrendous mistake.  Since you quoted me referring to
African-Americans, somehow you're trying for a non-sequitur that just
won't fly.  Your point?

rec.radio.shortwave:49563

>From the DRM website:

The DRM on-air system will propel the AM broadcasting bands below 30 MHz - short-wave, medium-wave and long-wave - to the next level.

DRM is the only universal, non-proprietary digital AM radio system with near-FM quality sound available to markets worldwide.

The quality of DRM audio is excellent, and the improvement upon analogue AM is immediately noticeable. DRM can be used for a range of audio content, including multi-lingual speech and music.

Besides providing near-FM quality audio, the DRM system has the capacity to integrate data and text. This additional content can be displayed on DRM receivers to enhance the listening experience.

Unlike digital systems that require a new frequency allocation, DRM uses existing AM broadcast frequency bands. The DRM signal is designed to fit in with the existing AM broadcast band plan, based on signals of 9 kHz or10kHz bandwidth. It has modes requiring as little as 4.5kHz or 5kHz bandwidth, plus modes that can take advantage of wider bandwidths, such as 18 or 20kHz.

Many existing AM transmitters can be easily modified to carry DRM signals.

DRM applications will include fixed and portable radios, car receivers, software receivers and PDAs. Several early prototype DRM receivers have been produced, including a software receiver. The DRM system uses a type of transmission called COFDM (Coded Orthogonal Frequency Division Multiplex). This means that all the data, produced from the digitally encoded audio and associated data signals, is shared out for transmission across a large number of closely spaced carriers. All of these carriers are contained within the allotted transmission channel. The DRM system is designed so that the number of carriers can be varied, depending on factors such as the allotted channel bandwidth and degree of robustness required.

The DRM system can use three different types of audio coding, depending on broadcasters' preferences. MPEG4 AAC audio coding, augmented by SBR bandwidth extension, is used as a general-purpose audio coder and provides the highest quality. MPEG4 CELP speech coding is used for high quality speech coding where there is no musical content. HVXC speech coding can be used to provide a very low bit-rate speech coder.

The robustness of the DRM signal can be chosen to match different propagation conditions.

Bush isn't doing any more than Clinton did in absolute numbers. Sure Bush has the first African-American female Secretary of State and the likely first Mexican-American Atty General but that proves little, the real question would be how representative of said groups his nominees are or how most of said groups view Bush. For that matter, Bush's FCC chairman has been a disaster for the likely future of broadcasting and for that matter on other telecommunications issues too and his policies to a great extent actually have lead to fewer minority broadcasters than when he first became either an FCC commissioner or chairman. There is this little thing called results and on that, so far a bunch of duds has been what's occurred from my perspective and apparently that of most "minority" voters.

Misterkook, why do you listen to such stations?
Alternatively, why don't you start up your own station?

Swansea Local Radio is to broadcast from studios in Swansea on a 28-day trial licence from Monday 31st January until Sunday 27th February 2005.

Swansea Local Radio, will broadcast from the Rugby Football Club in St Helen's, and aims to bring a vibrant alternative to the existing stations - truly 'local' news travel and information - as well as excellent music brought to you by the cr�me of local talented presenters.

The trial is in preparation for a bid for a full time licence which is to be advertised by Ofcom in May this year...

I agree wholeheartedly with this. Aiming a station at "children of the 60s" means broadcasting to people who've been exposed to everything that's happened since. Many of us like much of the music that's been produced from the 50s to right now. Playing only 60s music is a killer.

I wonder if the daydreamers who thought up the idea of putting a commercial radio station on a ship 4 miles out in the North Sea have considered that they would be increasing their costs by something like a factor of ten? Have they considered what they would be doing to their cashflow?

Ofcom will take one look at this and wonder what other potty ideas the applicant has in store. It seems likely they will put it through the shredder at the first stage of assessment.

January 27, 2005

By Charles Brewer

With its smooth, white lozenge of a body, backlit mono display and circular navigation control you'd be forgiven for thinking that the latest digital radio to hit the market was created by Apple.

However, the iTech brand has nothing to do with the iPod - it's a small company that has teamed up with the Xfm radio station to bring this stylish co-branded DAB radio to the market.

Operations are so simple that out-of-the-box to completed configuration takes less time than it does to retrieve the manual from the packaging. In digital radio mode, the Xfm DAB scans the airwaves and then alphabetically arranges all the stations it finds. If you find a station you particularly like, you hold one of the five buttons on top of the radio and the station is stored in the pre-set selection.

Naturally you get all the advantages associated with digital radio, such as station and program information scrolling across the screen, as well as near perfect signal quality. Other key features include a facility that will replay the last ten minutes of a programme at any time. If you want to return to the familiar, there is a standard FM tuner included and if you're fed up with what's on the airwaves you can listen to MP3's of your choice via the SD/MMC slot. Oh and the whole thing doubles up as a radio alarm clock.

I suggest you use the adapter provided but if the urge to wander around grabs you, you can insert 5 D-cell batteries into the radio's underbelly and be break free of the mains, at least until you get tired of carrying 1.7 kg around.

Verdict: great design, greater features

Price: �130

>
> The FCC lifted the quiet hours two months later, providing Salter "operated in full compliance with the Commission's rules." When interference complaints resumed, the FCC last July 15 again notified Salter it was restricting his hours of operation. The FCC NOF said a family member signed for the notice but that Salter told Commission officials he had not read it. As a result he transmitted while his operation was prohibited--between 6 AM and 11:59 PM.
>
> An August 2004 station inspection of Salter's CB station revealed that he was operating a non FCC-certificated transmitter, in violation of Part 95 rules. A Notice of Apparent Liability (NAL) proposing the $10,000 fine followed in October. The FCC's NOF upholds the fine, despite Salter's protests that his violation was not willful because he did not understand that use of non-certificated transmitters violated the rules and did not know about the reinstated quiet hours. Salter also claimed he couldn't pay the fine, but the FCC says he failed to provide tax returns or other necessary documentation to back up that claim. The FCC authorizes CB operation "by rule"--essentially a blanket license.

Think thats a big fine?  Well a guy out here in "La La Land" who held a ham ticket only a few days before it was "set aside" has him beat by $42,000 -- so far.  The latest $21,000 proposed forfeiture factors in an "upward adjustment" from the $7000 base fine for causing interference to licensed stations -- in this case the United States Coast Guard during a declared emergency.  The FCC already had affirmed a $10,000 fine levied against Gerritsen last year for interfering with Amateur Radio communications. In December, the Commission proposed another $21,000 fine, citing additional instances of alleged interference on amateur frequencies.

It goes as follows from the latest ARNewsline:

ENFORCEMENT:  ALLEGED COAST GUARD JAMMER FINED $21,000

A former ham who the FCC says jammed other communications during a declared Coast Guard emergency has been issued a rather hefty fine.  And its not his first.  Bruce Tennant, K6PZW, has the latest on the saga of Jack Gerritsen, the ex-KG6IRO..

--

The FCC has fined Jack Gerritsen, the ex-KG6IRO, another $21,000 for what the agency calls his willfull and malicious interfering with the radio communications of a Coast Guard Auxiliary Officer.  This,  while the officer attempted to use amateur frequencies to contact a sailing vessel in distress.

As previosly reported here on Newsline, the episode took place back last October. Thats when Al Geiger, KG6FB, was sailing solo to Guadalupe Island on his 36 ft. sloop, following another boat which was about 20 miles ahead of him. On Tuesday night, October 26th they were caught in a bad storm. Al turned back when he lost his Jib sail in the high winds. Both his VHF marine radio and his 2 meter ham radio amplifier had failed. Without his radio, Geiger lost contact with the other boat.

The jamming incident happened on the Catalina repeater on Friday morning, October 29th. The Coast Guard group in Los Angeles was interested in obtaining any information that KG6FB had about the other boat. So it had Bill Scholz, W1HIJ, who is the District Communications Officer for the Coast Guard Auxiliary, try to contact Geiger on the Catalina Repeater.

The QSO between KG6FB and W1HIJ started at 10:02 AM and continued off and on through about 11:40. The person alleged to be Jack Gerritsen showed up after the traffic began and refused to clear the frequency. Luckily, a tape recorder was going and here is a small part of what happened. The first voice you hear is that of Bill Scholz, W1HIJ followed by that alleged to be former ham Jack Gerritsen. This was recorded using VOX, so any dead air is missing.

--

W1HIJ: Wiskey One Hotel India Juliet, Coast Guard Auxiliary Upland Radio 1. This frequency is in use for emergency communications. This frequency in use for emergency communications. Please remain off he frequency. This is W1HIJ, Upland Radio 1 out.�

Unidentified Transmission: �Yeah whats your phone number. Ive never heard any emergencies on this damn frequency. You ever heard of 911 stupid?�

--

As the jamming was going on the Los Angeles FCC office was notified. Los Angeles Office agents located the source of a signal on 147.690 MHz, the input frequency to the Catalina repeater and traced it to Gerritsen�s home. At approximately 11:35 AM, the agents approached Gerritsen�s residence. After several failed attempts to gain the attention of anyone inside failed, one of the agents called Gerritsen�s residential telephone using his cellular telephone. The call was answered by someone who would not speak. The Los Angeles agent then requested a face to face interview with Gerritsen. Shortly thereafter the phone line went dead. Subsequent attempts to reach Gerritsen over the phone resulted in busy signals.

At approximately 4:38 PM the agents returned to Gerritsen�s residence. As they approached the front door they heard a male voice coming from inside which synchronized with the voice heard on the agents� handheld scanner tuned to 147.810 MHz. The voice was familiar to the agents as Gerritsen�s.

No one answered the door. The agents requested information concerning Gerritsen�s involvement in a Coast Guard rescue earlier that day, and requested an inspection and an interview. There was no response to the requests.

On November 3, 2004, the Commission�s Los Angeles Office received information from the President of the Catalina Amateur Radio Association. He reported that he had monitored and recorded the communications between Gerritsen and the Coast Guard Auxiliary Officer on October 29th, The recording reveals that for approximately 40 minutes, Gerritsen is speaking and playing a recorded message while the Officer asks him to cease transmissions and vacate the frequency because of the emergency.

In its order issuing the proposed fine to Gerritsen, the FCC indicates that there is no doubt that he was the source of the interference, It says that on October 29, 2004, Gerritsen, clearly identifying himself by his cancelled callsign of �KG6IRO,� began transmitting on the Catalina repeater input frequency even though it had been cleared for emergency communications. It says that Gerritsen refused to clear the channel, and refused to cease transmitting while obstructing the communications of the authorized users during the emergency. This says the FCC wannants at least the base forfeiture amount of $7000.

But says the FCC, Gerritsen�s refusal to clear the frequency, and his continual use of the frequency during the emergency, and his interference with a Coast Guard Auxiliary Officer�s ability to hear radio communications from the ship in distress makes this a far more egregous offense. As such, and considering the entire record in the case, the FCC concludes that Jack Gerritsen is apparently liable for a forfeiture in the amount of $21,000.

For the Amateur Radio Newsline, I�m Bruce Tennant, K6PZW, in Los Angeles.

--

Gerritsen already has a confirmed $10,000 fine and a Notice of Apparent Liability for another $21,000 pending against him. Adding in the latest N-A-L, that�s a total of $52,000 so far. As is normal when a Notice of Apparent Liability is issued, Gerritsen was given the customary time to pay or to file an appeal. (FCC)

January 27, 2005

By Charles Brewer

With its smooth, white lozenge of a body, backlit mono display and circular navigation control you'd be forgiven for thinking that the latest digital radio to hit the market was created by Apple.

However, the iTech brand has nothing to do with the iPod - it's a small company that has teamed up with the Xfm radio station to bring this stylish co-branded DAB radio to the market.

Operations are so simple that out-of-the-box to completed configuration takes less time than it does to retrieve the manual from the packaging. In digital radio mode, the Xfm DAB scans the airwaves and then alphabetically arranges all the stations it finds. If you find a station you particularly like, you hold one of the five buttons on top of the radio and the station is stored in the pre-set selection.

Naturally you get all the advantages associated with digital radio, such as station and program information scrolling across the screen, as well as near perfect signal quality. Other key features include a facility that will replay the last ten minutes of a programme at any time. If you want to return to the familiar, there is a standard FM tuner included and if you're fed up with what's on the airwaves you can listen to MP3's of your choice via the SD/MMC slot. Oh and the whole thing doubles up as a radio alarm clock.

I suggest you use the adapter provided but if the urge to wander around grabs you, you can insert 5 D-cell batteries into the radio's underbelly and be break free of the mains, at least until you get tired of carrying 1.7 kg around.

Verdict: great design, greater features

Price: �130

28 January 2005
Press release

At a signing ceremony in Beijing, China Radio International (CRI) has renewed and extended its agreement with WRN, the London-based international broadcaster and transmission service provider, for the extensive provision of global broadcast services. The new contract was signed by CRI Vice President, Mr Xia Jixuan and WRN Chairman, Mr Karl Miosga, at CRI's headquarters on 9th December 2004.

WRN has worked closely with CRI for more than six years since signing a Collaboration Agreement in Beijing in 1999. WRN works on CRI's behalf, distributing its daily programmes to reach listeners around the world using AM and FM transmissions that augment CRI's traditional Short Wave broadcasting from China. CRI's daily programmes can be heard on FM in Berlin and Moscow and on AM in London, St Petersburg, across Western Europe, South

West Russia, Ukraine and Romania. WRN identifies the most appropriate transmitters, undertakes local negotiations and monitors the output for CRI.

Furthermore CRI's daily programmes in English, French, German and Russian can be heard on WRN's international news networks, distributed around the world via satellite, cable, local FM relays, wireless applications and the Internet.

After the signing ceremony, Mr Karl Miosga, WRN's Chairman, said: "WRN is honoured to have signed a new agreement expanding its cooperation with CRI. 2004 saw significant growth in both local and new media outlets that carry CRI programmes. WRN's networks distribute CRI on key platforms such as Sirius satellite radio in the USA which has now achieved over 1 million subscribers, and Sky digital which is reaching over 8 million homes in the UK and Ireland. 2005 is going to be an exciting year full of new developments and WRN looks forward to bringing these to CRI."

After the signing ceremony WRN met with Mr Wang Gengnian, the new Director General of China Radio International, to discuss issues of mutual interest to the two organisations.

Notes for Editors:
About WRN
Founded in 1992, today WRN is a major international broadcaster and transmission service provider, headquartered in London, England.

WRN is also a major transmission company offering a range of broadcast services including permanent digital and analogue satellite transmissions, medium and short wave transmissions, Internet services (live streaming, on-demand downloading of audio and video), content hosting, broadcast consultancy and studio facilities. WRN's clients include international and national public service broadcasters, commercial radio stations, satellite bouquet operators and cable companies.

WRN's eight 24-hour-a-day international radio networks broadcast a rich mix of speech radio drawn from more than 30 of the world's leading public radio stations, offering listeners a uniquely varied cultural perspective. WRN's English language networks are available globally and are carried as an overnight service on many local AM and FM broadcasters, cable services, direct-to-home reception via satellite, and Internet audio. Furthermore, in Europe, WRN operates networks in German, French and Russian.

Bush increased his black vote (by about 3 points) relative to=20
the 2000 numbers, while Kerry's huge effort to get more black
voters to the polls totally failed and he lost those points.
Most blacks didn't vote for Bush -- Bush gained black votes

and Kerry lost black votes.

You won't find any CDs of the programs; however, streaming audio of what you
want can be found at www.reelradio.com

I'm listening to the hard core real jazz station on XM at the moment, and you know what it is playing: Queen Latifa. Basically, I have had this service for like three months at home; thankfully my commute is short, and I don't need it in the car. I am shocked at how mainstream the channel choces are:  There are like six to eight channels in country, rock, pop, rap, talk. But only three in Jazz and only one plays real jazz and then only about half the time. The rest is Kenny G pap or worse --like Muzak. Way heavy on vocals, too. Classical? ONE STATION! The other two are more like light opera and pop classical. I'm very disappointed and can only dram of the day I can get Internet radio in the car and some real choices. Satellite may be better than broadcast, but it still sucks. $10 a month? Sorry, I'd rather buy a new CD each month.

Hi Alex....

This may not be what you are exactly looking for, but 2 sites have online audio & you can make your own CDs of it.....

www.reelradio.com
www.radiolovers.com

Actually, I myself would like to hear WQAM Miami in their "pre-top-40" days....I don't think any audio exists.

sincerely
Chris

You won't find any CDs of the programs; however, streaming audio of what you want can be found at www.reelradio.com

I'm listening to the hard core real jazz station on XM at the moment, and you know what it is playing: Queen Latifa. Basically, I have had this service for like three months at home; thankfully my commute is short, and I don't need it in the car. I am shocked at how mainstream the channel choces are:  There are like six to eight channels in country, rock, pop, rap, talk. But only three in Jazz and only one plays real jazz and then only about half the time. The rest is Kenny G pap or worse --like Muzak. Way heavy on vocals, too. Classical? ONE STATION! The other two are more like light opera and pop classical. I'm very disappointed and can only dram of the day I can get Internet radio in the car and some real choices. Satellite may be better than broadcast, but it still sucks. $10 a month? Sorry, I'd rather buy a new CD each month.

Hi Alex....

This may not be what you are exactly looking for, but 2 sites have online audio & you can make your own CDs of it.....

www.reelradio.com
www.radiolovers.com

Actually, I myself would like to hear WQAM Miami in their "pre-top-40" days....I don't think any audio exists.

sincerely

```
Chris

Why don't you tell Charles Brewer, whoever he is, to post his own reviews to
the group?
Does he (and all the others) know you are reproducing their work?
Time to filter you out as you never seem to post any message of your own.
It would be easier for you to compile all the stories you have an interest
in and put all the website addresses in a big list.

If it takes 5 D cells and weighs 1.7kg I don't think many people will
confuse it with an iPod!!!

Let's see, Kerry beats Bush by almost 9 to 1 in the African-American
community but Bush claims a mandate with 51% to 48% in the general
population.  The other amazing statistic btw is that Kerry got more

votes for president than other candidate for president but one. I finally note that Bush at his best still got less support than Richard Nixon or Bob Dole in the African-American community. Hmmm, you can't spin this one, African-Americans in general don't approve of Bush, and that would still be true if instead of 3% more he had doubled his percentage in the African-American voting populace.

Bush can claim the support he pays for in the African-American community, one way or another and that's about it.

31 January 2005

Today sees the launch of a new local radio station and Swansea RFC wing Nicky Jones was on hand to help give it a boost. Swansea Local Radio was due to go on air for month-long trial as it aims to win a permanent radio licence. The station is based at St Helen's and winger Jones is helping to promote new station.

Budding broadcasters are also being given the chance to be a part of the fledgling station.

A spokesman said: "This is an exciting project which is an opportunity for the Swansea city population to have access to a different kind of radio station, one that meets the cultural needs of the people of the city of Swansea."

Mark Williams, who has also worked for BBC and Sky, will present the morning show.

Swansea University lecturer Binda Singh has been appointed as the station's project director.

Can anyone help please?

I have installed Radiocart 1.70 on a windows 98 system.  It worked okay a couple of times.   Now all I get is the title screen and then nothing, just Radiocart in the menu bar at the bottom.  Any ideas gratefully recieved.

many thanks

Ian

100% agree on the classical.  Sirius used to have a chamber music
station but now it's classical pops.  Sirius does a better job with jazz
than XM, IMHO, provably not worth changing systems though.

Sounds like the complaints about terrestrial radio. Usually the reason is
given as too many stations owned by too few companies. A satellite radio
service is x number of channels all owned by one company. I'm not
surprised by your complaint.

The Swedish-language Web page of SAQ (www.alexander.n.se) seems to say something about 1700 Swedish time (1600 UTC) on 2 February. Will the station be on the air then?

Arbetskv�llar
Arbetskv�llarna har helgledigt nu! N�sta arbetskv�ll blir onsdagen den 2 februari kl. 18.00.

http://www.alexander.n.se/

In 1895 the Italian physicist and later Nobel Prize winner Guglielmo Marconi (1874-1937) had realised wireless telegraphy, i.e. the possibility of transmitting information with the help of radio waves.

The communication across the Atlantic did not function well during World War I and the need of telegram traffic with America was great. The Swedish Parliament therefore decided in 1920 that a Swedish long wave transmitting station and a receiving station should be built under the direction of the "Telegrafverket".

Important for the location of the establishment was that the wave propagation path was run across open waters - south of Norway and north of Denmark and Scotland. In Grimeton, east of Varberg, the open landscape gave free way for the radio waves out towards the Western Sea and besides, the name was easy to pronounce for Americans.

The Great Radio Station was built during the years 1922-1924.

The transmitter, the heart of which is an alternating- current generator (alternator), was developed by the Swedish engineer Ernst Alexanderson, pioneer in radio, employed at General Electric in Schenectady and chief engineer at Radio Corporation of America (RCA).

In the autumn of 1923 the establishment was ready except for the six 127 meters high antenna towers, which were delayed one year because of strikes at the ironworks. The towers are placed at intervals of 380 meters with the 46 meters long cross-arms on top carrying the eight copper wires, which make up antenna capacitance and feed energy to the six vertical radiating elements.

A little village with dwelling houses for seven families was built for the employees.

On December 1, 1924, the great radio station Grimeton went into traffic with the call signal SAQ on 16.1 kHz (wavelength 18.6 kilometres) soon enough changed to 17.2 kHz (wavelength 17.4 kilometres).

On July 2, 1925, the establishment was formally inaugurated. King Gustaf V arrived by car from the Varberg railway station in company with among others the constructor Ernst Alexanderson.

During the station's now more than 75 years of history much has happened. 1938 short-wave tests were made. World War II accelerated the development and the number of short-wave transmitters increased rapidly and there are still some twenty transmitters at work. FM- and TV-transmitters were placed here and base stations for different mobile services were also established gradually.

31 January 2005

Forest of Dean Radio is offering free broadcasting training courses across the area. A six-week beginner's course in radio skills starts on Tuesday from 1 to 3pm at the Cinderford studio.

The same course starts at the Newent studio on Wednesday, May 4, from 7 to 9pm.

It will show people who are interested in being a presenter, producer or technician how to plan a programme, use recording equipment and broadcast live across the Forest.

An advanced one-day course in radio skills will teach how to edit effectively, brush up presenting skills, make a better promo and improve production and research.

The advanced course will be held in Coleford tomorrow, in Lydney/Sedbury on Saturday, February 26, Newent on Saturday, March 26, and Cinderford on Saturday, June 11, from 10am to 3pm.

Another course, called Cool Edit, will teach how to edit and manipulate sound on computer, using professional software at Lydney/Sedbury on Saturday, April 23, from 10am to 1pm and Newent on Saturday, May 21, at the same time.

For those interested in writing for the radio, there are three-week beginners' courses at Coleford and at another venue yet to be confirmed.

A one day advanced level writing for radio will show how to turn scripts into a broadcast at Coleford on Saturday, March 19, and at another venue on Saturday, May 7.

To book a place on any of the courses contact the Forest of Dean Radio on 01594 820722.

I have both and my impression is exactly the opposite of yours. I find the XM channels are all AOR, All Over The Road. You can hear good music on XM if you punch enough buttons. They do have a pattern of playing really obscure music on many channels. Sirius has more channels you can turn on and just leave it there.

Hi,

There's a NEW Networked UK Chart show available for stations to stream.

It's a FREE service for any station to take & the number of UK stations that are carrying the show are rapidly growing.

If there's a station interested in the various packages available visit the Take40 website

www.Take40uk.com or e-mail Chart@Radio.FM

Bye

With the rollout of AOL version 9.0 you can't even read this newsgroup or any other unless you use the old method, ala the AOL version 1 days. Thanksfully I can access it through my SBC DSL account.

Dennis

This is clearly an "eye of the beholder" thing.  I've sampled both services--own a Sirius receiver myself, bought an XM for my son.  Both IMHO do fabulously music-wise.  There's more there than any normal human could consume or want.  To me, the clear difference is in the non-music offerings.  If you enjoy public radio, you'll be much happier with Sirius.  Two NPR channels, a PRI World channel that includes (for now) much CBC-Canada content, the BBC, C-SPAN and an interesting channel called World Radio Network that carries about two dozen international public broadcasters in English.  Also, CBC Radio One will be available 24/7 beginning in the spring.  If you're a baseball fan, you'll want XM; if you want football, hockey (if it ever returns), English soccer and NBA and college basketball, you'll want Sirius.

Wednesday, February 02, 2005

The tsunami disaster has spurred at least one country to put its national broadcasting service in order. In the Pacific state of Vanuatu, only half the population can hear the national broadcasting service, because the shortwave transmitters were allowed to fall into disrepair some years ago. But now, reports The Independent, at the insistence of the country's Prime Minister they're frantically working to get 7260 kHz - the daytime frequency - working again properly. After that, the night time frequency of 3945 kHz will also be put back on the air as quickly as possible.

Satellite radio does indeed suck the lifeblood out of terrestrial radio. And anyone who'd prefer fact-based content analysis to this spin by the competition can simply check here:

http://www.xmmonitor.com/played/search

Surprise, surprise.  There's ZERO Kenny G on the Real Jazz channel, at least in the past 30 days.  Kenny G is where he belongs, on Watercolors, The Blend, The Heart.  In fact there are fewer songs by Kenny G all around the XM dial than there are by Kenny Garrett on Real Jazz alone.

> But you won't find a lengthy phone bill in his possession. Stewart talks
> to
> friends all over the world another way - using radio waves.
>
> In the clubhouse of the Shenandoah Valley Amateur Radio Club on
> Winchester's
> Grace Street, Stewart and his ham radio buddies talk to other amateur
> radio
> enthusiasts across the globe.
>

> Shenandoah Valley Amateur Radio Club Vice President Sam Long stands under the ham radio antennas his club uses to broadcast to the world from its headquarters on Grace Street in Winchester.
>
> They ask questions like, "What kind of radios do you have?" and "How's the weather over there?"
>
> After a few conversations with a contact in Iraq or China, Stewart has a new friend.
>
> "Everybody's on a level playing field," the Winchester native said. "It doesn't matter whether you're Iraqi, or British, or Russian, or Chinese, or American - everybody is on the same level."
>
> Ham radios have been handed down through generations. The local club began in 1948 and since then, parents and grandparents have passed on the hobby to their children and grandchildren.
>
> But the future of ham radio hasn't always been so bright.
>
> Amateur radio clubs often face the threat of losing their radio frequencies to commercial ventures. As the demand for AM and FM radio grows, the amateurs feel the effects of dwindling broadcast space.
>
> Cellular phone towers also are a big concern, Stewart said. The club rents land near U.S. 522 north of Winchester, along Route 654, and members have built radio towers that help them pick up clearer frequencies.
>
> But when cellular phone companies, such as Cingular, buy the land, the club has to move its towers to another location. And the options are limited.
>
> When they met last month, members of the Frederick County Planning Commission discussed placing stricter rules on where ham and commercial radio towers can be built.
>
> Some county residents say the radio towers are an eyesore.
>
> Commissioner Charles DeHaven said some towers used for commercial and ham purposes are built too close to property lines.
>
> The Planning Commission has been supportive of ham radio in the past. But Stewart worries the commission needs to be reminded of ham radio's role as a public service.
>
> In addition to the social aspect of the hobby, ham radio provides backup communication in emergency situations.
>

> During this year's hurricanes in Florida, ham radio operators sent reports to local law enforcement and safety officials.
>
> "Time and time again, it's been the only method of communication that has worked," said Tom Sullivan, a longtime Winchester resident and ham radio operator.
>
> Commissioner Rick Ours said if radio towers required conditional-use permits, that would give the county a chance to examine where they are being constructed.
>
> "I certainly don't want to discourage people who do ham radio, because I think they do a great service to the community," Ours said. "I think that in general, the county does need to have some control."
>
> If the Planning Commission wishes to address the tower issue, DeHaven said, the public will have a chance to speak on behalf of ham radio.
>
> Stewart said he would be happy to speak to the Planning Commission and share ham radio's benefits and services.
>
> "It's a lifelong hobby because it's always changing," Stewart said. "It's a hobby that'll take you from cradle to grave."
>
> http://www.winchesterstar.com/TheWinchesterStar/041101/Area_radio.asp

Miss Withers obviously was not qualified to write this article. Or perhaps she didn't know what she didn't know and this failed to ask the proper questions. When you read a sentence that says, "...members have built radio towers that help them pick up _clearer_ frequencies.," you know you're going in for a rough ride. And it's difficult to understand some of the stuff she's written. In one sentence, it's unclear whether she means to say that the ham radio hobby is passed down from generation to generation or that the radio gear itself goes from generation to generation. It might, in fact, be both but she's such a poor writer than you just can't tell what the heck she means. But I nonetheless appreciate the report on the challenges faced by this dying, indeed close-to-death hobby in its struggle to maintain some signs of life.

Cheers,

Don

Barry Crimmins, comedy writer from Air America Radio, and Randy Credico, comedian and political activist, bring you the best comedians and political comedy writers every Tuesday night. They rant at the current political scene, doing material that will never make it to the airwaves as we know them. Depending on which artists and writers appear on any given night echoes of Lord Buckley, Lenny Bruce, and Woody Guthrie may be heard in the house.

http://www.barrycrimmins.com/index.php?page=home

8PM Tuesday nights at
Rocky Sullivan's Bar
129 Lexington Ave @ 28th street.
Manhattan

(One block east of the 28th street Lexington Ave local Subway stop.)

Most nights the hat is passed.  On a night that has several
people booked, $5 or $10 is collected at the door.

Sounds like propaganda time!   Didn't we drop a lot of radios on the
Iraqi people so we could give them instructions and tell them how
wonderful we were while dropping bombs on them to keep their evil
dictator from dropping bombs on them?  ;-)  The more things change the
more they stay the same!

Well, it's like this....you've seen, on Star Trek or some such program, organisms
and/or devices which act as energy sinks, sucking in all the power in the area
they're in?  Well, Bush and his minions are so dim, that when they move into an
area,
the same thing happens.  Lines of force bend towards the black hole in their
heads,
```

and everyone else goes wanting.

6 January 2005

Westwood One has announced its broadcast team for Super Bowl XXX Esiason, John Dockery, Bonnie Bernstein, and Jim Gray. Albert and Esiason will provide complete play-by-play coverage with Dockery and Bernstein reporting from the sidelines. Jim Gray will host the pre-game, halftime and post-game shows. Super Bowl XXXIX airs live from Jacksonville on February 6, and will be heard on over 550 affiliates and the American Forces Radio Network.

For sale:

(The "Radio Crazy" is baaaakk!) Hi!

Partial interest in small market radio station in Russellville, Alabama. 1 KW, non-directional, 1500 Khz. No real estate. On the air since 1974.

This is a joint venture and there is an element of risk. You could lose all or part of your investment.

Active or inactive investors with $5,000 min. are welcome. All investors would be on the board with full voting rights if desired. No individual can own more than 49 percent. This applies to me too!

Tel: (478)741-1710 in Macon, GA

73,

Meyer Gottesman, W6GIV
aka The Radio Crazy

A couple of days I try to visit http://www.radio-info.com/ . Is this site offline? Or a new URL?

Erwin

There appear to be administrative issues regarding renewing the domain...
the pages are inaccessible right now.

I'd like to thank you for noting this, and soon enough that I could arrange for a
recording of it.  I haven't seen the results as yet, so I don't know if it's a
good
dub, but having worked at a Bill Drake clone (WTAE) and knowing that CKLW was the
monster it was, I'm hopeful I've got a good version.

> (Anyone know how to obtain this on-line or a copy in European format?)

I'm willing to offer, to the first 10 requests, to make dubs of this, assuming I
have
a good copy, of course.

The rules are that I'll only make one copy, and that the blank and return postage
be
provided for each request.  As I don't have a DVD burner, and if at least 7
requests
also include $10 US so that I might buy one, I think I've got the software to burn
a
DVD in either the North American standard (NTSC) or PAL.  But that's up in the
air.
No guarantees.  First come, first served.  Your results may vary.

Yup.  There has been a difference of opinion with their domain
registrar about the legitimacy of the contents of their whois record.

Scott Thomas of Zeo Radio tells me in e-mail that they are working on
resolving the problem.

Apparently there was a problem with invalid WHOIS info so ICANN has
pulled their domain for the time being.  This happened a couple of days
ago.

I don't know if they can be accessed using a numeric IP address,
but if so, can somebody post it here?

I went to http://www.allwhois.com and I entered that url into it.
And I have noticed that it is disabled because of wrong info of the domain.

If you do a WHOIS search on the domain, you get the weird result below. Apparently ICANN, which is responsible for IP lookups for domains, sites and such, has disabled the domain because the WHOIS information provided by/to the registrar didn't check out.  Just why this is, I don't know.  I miss the site, too.

Erwin <erwin969@hotmail.com> had written:
| A couple of days I try to visit http://www.radio-info.com/ . Is this site
| offline? Or a new URL?

Whois shows it as "domain disabled" with additional:

"This domain was reported to, ICANN for invalid WHOIS info.
customer-must-correct-the-info@or-the-domain-will-be-deleted.com"

It's the first time, I've seen one of *those*.

I guess the disco ball has stopped turning, at least temporarily.

It's turning again at:

www.radio-info.net

They supposedly have worked to fix the .com domain problem above,
though the .com version is inaccessible for me as of this hour.

Mike

Andrew Moseley (G7VOT) on January 9, 2005

OFCOM are the UK's Regulator for Communications. And they have come up with
a pathetic plan called the Spectrum Framework Review.

After reading this please visit my Notice board here
http://g7vot.myikonboard.com/viewthread.php?threadid=20 and let me know your
opinion.

UK Hams. Your opinion counts in this matter don't just sit there and let others act for you as it may not be enough. Amatuers outside the uk can help too by emailing Ofcom here, contact@ofcom.org.uk and let them know what you think.

Ofcoms Spectrum Framework Review has been given a thorough examination and what has been uncovered is very very alarming. If you have not yet sent a letter of concern to OFCOM, then reading the following may well give you a kick up the butt to do so. Deadline is the 15th of February.

The following information is taken with thanks from the Chelmsford Amateur Radio Society's web site.

It is also with a serious request to put pen to paper and reply to the Ofcom Proposal. Failure to inform them that they are acting in a totally cavalier manner, will result in the radio spectrum used by Radio Amateurs being swallowed up by Mobile Phone Companies.

By the time that Ofcom realise their errors, the infrastructure will be fragmented and the damage will be done. It should be realised that Ofcom is now no longer Staffed by Engineers/Radio Amateurs, it is entirely Commercial people with Mobile Phone backgrounds who are attracted by the possibility of charging someone �1m/MHz.

The phrase "If you do not use it, you will loose it" will be wasted unless YOU put pen to paper.

Summarised Ofcom's 23rd November 2004, proposals for Licenses and spectrum.

o Spectrum Framework Review with a Deadline for replies by 15 February, 2005.

o Advocates total disregard of all International rules in the interest of National flexibility

o Suggest that 60% of all spectrum is tradable

o Is in favour of Software/Cognitive Radio that could potentially operate on top of Radio Amateurs without warning

o Proposes to withdraw from CB, Amateur, Maritime licensing

o Proposes to simplify access to entrants - barely after the new Licence structure is in place

o Has caught RSGB totally off guard, with a weaker structure

o All Radio Amateurs and Clubs are urged to reply with a copy to their MP with a request that he/she questions Ofcom on their intentions.

o Original Documents on http://www.ofcom.org.uk

Be warned this is a massive document which seems as thought it has been made deliberately big - the cynical would say "to stop people reading it"! It is OK for Broadband users.

o Easier to download from www.essexrepeatergroup.org.uk

Many of the threats are TLAs (Three Letter Acronyms) so here are some:-

o PSB - Public Service Broadcasting

o DTT - Digital Terrestrial Television

o DRLs - Digital Replacement Licences

o SFN - Single Frequency Network - BBC/National DAB is a SFN

o DVB-T, DVB-H - Digital Video Broadcasting

o DAB-S, DAB-T - Digital Audio Broadcasting (Satellite, Terrestrial)

o SFR - Spectrum Framework Review

o ACC - Adaptive Cruise Control, - uses SRR and LRR

o SRR/LRR - Short /Long Range Car Radar on 79 or 24GHz

o UWB - Ultra Wideband

o SDR - Software Defined Radio

o A whole new set of threats is on us now. . .

o Most attention so far on Broadband over Powerlines

o BPL - Broadband over Power Lines - USA

o PLT - Power Line Telecoms - UK

o Data can be Voice, Internet or TV

o In use by Southern Electric

o Raises noise floors etc over most of HF bands

The .com version is now redirected to directNIC.com, the registrar
with whom they are having some sort of dispute.

Eight of the UK's radio giants have collaborated to suspend their schedules for 12 hours on 17 January in aid of the Asian tsunami appeal.

Emap, Chrysalis, Guardian Media Group, GWR, Scottish Radio Holdings, Capital and Virgin have created UK Radio Aid - a move which will see a special one-off programme broadcast from 6am from Capital's London headquarters.

The special 12-hour show will be guest presented by two DJs every hour from across the networks.

Content will include contributions from musicians, sports and TV stars, and politicians.

The networks that have agreed to the deal have pledged to donate a single day's profits to relief programmes associated with the tsunami.

Mark Story, chairman of UK Radio Aid, said: "I am immensely proud of and grateful to our colleagues across commercial radio who when asked for an extraordinary response to this disaster were all in immediate agreement to unite for this very special day."

Real Madrid and England striker Michael Owen added: "This is a tragedy that has touched everyone and it's important that the giving continues. It will take years to restore the communities in these countries and we should all do our bit to help.

"This is a great idea which reflects the value of working together to help."

Well, today it looks like the domain registry information has been restored:

```
Registrant:
 Zeo Corp
 Corporate Offices
 Denver, CO 80112
 US
 720-404-8342

Domain Name: RADIO-INFO.COM

Administrative Contact:
 eh, zc eh@neverending.biz
 Corporate Offices
 Denver, CO 80112
 US
 720-404-8342

Technical Contact:
 eh, zc eh@neverending.biz
 Corporate Offices
 Denver, CO 80112
 US
 720-404-8342

Record last updated 01-10-2005 07:25:20 AM
Record expires on 01-28-2008
Record created on 01-28-1999

Domain servers in listed order:
 NS0.DIRECTNIC.COM 204.251.10.100
 NS1.DIRECTNIC.COM 206.251.177.2
```

Now all Zeo has to do is restore the name service, and radio-info.com should be back in business.

Wow.  That is actually the best news I have heard in ages.... actually requiring accurate domain contact information is something that SRI did and which really hasn't been done at all since NSI took over the domain database.  In more recent years most registrars haven't even vaguely attempted to keep the contact database accurate, which makes it pretty much impossible to track down and stop spam sources.

>I guess the disco ball has stopped turning, at least temporarily.

radio-info is a legitimate site and I don't think they'll have any problem getting the database fixed.  But hopefully a lot of less-than-legtimate sites will be pulled down as well.

In China, CRI leases SW transmitters from the Chinese PTT.
Voice Of Russia, does the same in Russia via ROSTELCOM.

In fact -- Radio France International has the same 'broadcasting organization' model.
[France Telecom owns ALLOISS and ISSODUN SW relay sites, and leases them back to RFI.]

Jamming in China may be done by the military [or other entities] in country, with no connection to the PTT.
There was a connection with the PTT in the USSR, but China has not perused that model internally.

Jamming was started by Italy under Mussolini, against the USSR.
In international law jamming does have some legitimacy -- pursuant to certain conditions being met.
Religious broadcasters broadcasting into China are not jammed, that I am aware of.

If a broadcaster is being jammed on SW, it is indicative of a failure in international relations.
Jamming also shows a failure of the broadcaster to take into account the realistic needs of its target audience.

The US is obsessed that there still are some non-Christian heathens that exist on earth that are 'communistic' -- and it is willing to endanger relations with China by using Cold-War ideological broadcasting tactics.

I can only assume that the US wants to re-create the Hungarian revolt of 1956 in China -- a concept 1000 years out of date considering Wal-Mart's dependency on cheap Chinese goods to be profitable!

> Why does Radio Canada retransmit Radio China International?  China seems
> to
> jam most western stations, why should we help them?

Maybe it's the fact that since the chief complaint against over-the-air
radio is too much corporate constriction of what's played, actually
shelling out money for a group of stations all under the control of one
company just doesn't make a whole lot of sense.

Not true? You'll have to show me, without me having to risk hundreds of
dollars to find out.

==================================
DRM listing in Wikapedia needs more updating...

http://en.wikipedia.org/wiki/Digital_Radio_Mondiale
French / German / Spanish versions non existant...
==================================
```

Digital Radio Mondiale (DRM) is an international non-profit consortium committed to designing an open platform for digital radio broadcasting around the world, especially on shortwave.

The main advantage of such digital broadcasting is that it yields sound quality comparable to FM, but over shortwave distances. As a digital medium, DRM can also transmit other digital data besides digitized music, including text, pictures and computer programs. DRM has been designed especially to use older transmitters designed for audio AM, so major new investments are not required for early transmissions. The encoding and decoding can be performed with digital signal processing, so that small computers added to a conventional transmitter and receiver can perform the rather complex encoding and decoding.

The organisation has recently received approval for the AM standard from the IEC, and the ITU has approved its use in most of the world. Approval for the Americas (ITU region 2) is pending amendments to other existing international agreements. The inaugural broadcast took place on June 16, 2003, in Geneva, Switzerland, at the ITU's annual World Radio Conference.

DRM's system uses MPEG-4 to code the audio: AAC for music and CELP or HVXC for speech programs. All codecs can optionally be combined with SBR. The resulting low-bitrate digital information is modulated using COFDM. It can run in simulcast mode by switching between DRM and AM, and it is also prepared for linking to other alternatives (e.g. DAB or FM services). DRM has been tested successfully on shortwave, mediumwave (with 9 as well as 10 kHz channel spacing) and longwave.

I know Sirius has, and I think XM does, too, the opportunity to sample either service for 3 days or so for free. From the discussions I've seen in the alt.satellite.radio newsgroup, both services seem to work adequately to quite well technically, so your choice then is, or should be, based on programming.

Consult each service's website (www.sirius.com and www.xmradio.com) for details.

> that model internally.

The Communist Party of China method of (non-)jamming is to park a domestic
service
transmitter ontop of any undesirable external Chinese language broadcasts
and pump up the propaganda
volume.  It is no wonder China has the most number of shortwave
transmitters.
```

> The US is obsessed that there still are some non-Christian heathens that
> exist on earth that are 'communistic' -- and it is willing to endanger
> relations with China by using Cold-War ideological broadcasting tactics.

LOL - how long have you worked for the CPC propaganda dept? How are the benifits?

> I can only assume that the US wants to re-create the Hungarian revolt of
> 1956 in China -- a concept 1000 years out of date considering Wal-Mart's
> dependency on cheap Chinese goods to be profitable!
>

No, it is the ordinary people in China who wish to start a Hungarian revolt.

Before you make a complete fool of yourself you need to begin you re-education program:
http://english.epochtimes.com/jiuping.asp

Once you have completed the course you can take the Resign from the CPC quiz:
http://www.9ping.com/

Now go tote that lil' Red Book.

If you are a customer of the Dish Network (satellite TV), you have access to
the Sirius music channels. You can then decide whether you want Sirius.

I have Sirius and have had a one month subscription to XM.  I really like that I can find music on sat radio that I could never find on terrestial radio.   For example, I like Blues, Bluegrass and Folk music, which is not available on the radio where I live.  This was enough to make me want to subscribe.

Ofcom, the UK's broadcasting regulator, have announced that they will be advertising a new licence for the Newry area in December. The new station will have a broadcast frequency of 100.5MHz FM and its coverage area would give it a potential listenership of 90,000.

NW7US Propagation Alert

January 15, 2005

During the series of flares from solar sunspot region 0720, at 0614 UTC 15 January 2005, a strong solar flare and radio sweep event was observed. This indicates a full-halo coronal mass ejection (one that is headed directly toward Earth). The start time of this Type II burst was 0554 UTC 15 January 2005. The shock speed is estimated at 1300 km/s - this is a MAJOR SHOCK. An extremely strong Type IV event followed the Type II event. The sweep looks optically correlated with the flare from region 0720. (To see the sweep, browse to

It is now expected that the start of January 16 will see strong geomagnetic storminess, increasing to MAJOR GEOMAGNETIC storminess, then declining late on January 17 to active levels. This could well be a major Aurora event, as well. *STRONGLY DEGRADED HF PROPAGATION CONDITIONS ARE EXPECTED* from 16 January through 17 January 2005.

Additional details will be reported when available.

http://prop.hfradio.org/ips_type2event-20050115.gif (IPS))

News from the Echolink Tsunami Relief Net indicates that a limited amount of health and welfare traffic is now flowing via amateur routes, although there is still a lack of information from some locations. News of the amateur operation in the Andaman Islands demonstrates the value of amateurs providing emergency communications.

Electricity and landlines are yet to be restored in Little Andaman, where there is heavy damage. Amateur radio volunteers have been providing a helping hand to the Andaman and Nicobar administration and assisting governmental and non-governmental agencies by coordinating the rescue and relief operations locally, and passing third-party welfare messages. From the original small DXpedition team of five Indian amateurs on the Andaman Islands at the time of the earthquake, there are now between 25 and 30 amateurs there. They have been operating from various parts of the Andaman and Nicobar Islands, including a relief camp housing 2500 tsunami victims. Amateurs involved on the islands include VU2JOS, VU2LIC and a team of eight volunteers from Gujarat headed by VU2CPV, who is also a police official. Many of the amateurs are using VHF hand portables for local coordination.

Whenever they have messages for the mainland, these are relayed through their HF base stations located in different parts of the Andamans, generally on 7095kHz. There is also emergency traffic on 14190 and 21245kHz.

Please keep these - and any other frequencies heard to be carrying emergency or health and welfare traffic - clear. Thanks to RSGB Radio Communications Voluntary Services coordinator Paul Gaskell, G4MWO, for this report, which was compiled with information supplied by VU2MUE and G4HPE.

According to The Daily DX, compiled by Bernie McClenny, W3UR, all Indian amateurs were authorised to operate from the Andaman and Nicobar Islands from 29 December in order to "assist the Civil Authorities in handling the messages pertaining to the disaster". Prior to December, there had been a 17-year ban on amateur radio operations from the Andamans and Nicobars.

A detailed report on the involvement of radio amateurs in the tsunami disaster relief operation can be found on the RSGB website at www.rsgb.org

For a more detailed report on the involvement of radio amateurs in the tsunami disaster relief operation please click

Europa Radio International has acquired a refurbished 5 kilowatt AM transmitter which is to be installed at a site in the former Soviet Union. The transmitter will be shipped next month and, after conversion work to double its output power and the antenna system has been upgraded, we aim to have it operational by late Summer 2005.

Whilst the transmitter will be owned by us, it will be operated and maintained by a former engineer at the (until now) redundant site.

We anticipate that we will have some air-time available for hire at a later date.

In the interim Europa Radio International will continue to use the excellent transmission facilities in Latvia and shortly, a second transmitter in the United States.

HISTORY:

We carried out our first test broadcast via the 100kW Short-Wave transmitter located at Ulbroka near Riga in Latvia.

The transmission took place on September 5th, 2004 and the response to the broadcast was overwhelming with listeners contacting us from all over the World

Internet noise threatens emergency radio

4 January 2005

New Scientist
Barry Fox

After the tsunami hit Sri Lanka on 26 December, Victor Goonetilleke, head of the island's amateur radio society, delivered a short-wave radio set and two 12-volt car batteries to the prime minister's emergency headquarters in Colombo. At the same time, three of his friends drove through the devastation to Hambantota, on the hard-hit south-east coast, where they set up another battery-powered short-wave radio.

For two days, while the military struggled to restore electricity supplies and phone lines, the prime minister was able to use the short-wave link to talk to staff on the ground.

Short-wave signals from Sri Lanka, the Andaman Islands and mainland India also helped to spread news of the disaster around the world. The same happened after the 9/11 attacks and last year's hurricanes in the Caribbean. When phones and mains electricity are down, making the internet unusable, short-wave radio enthusiasts are able to maintain emergency communications.

But not, perhaps, for much longer. Plans to deliver broadband internet signals to homes and businesses down mains electricity cables, rather than telephone lines, could cause interference that will drown out the faint signals from distant short-wave transmitters.

## Unshielded cables

Power companies in the US and Europe are pressing ahead with the technology, with the aim of setting up in competition to existing phone-based services. The downside is that the packets of internet data pulsing down unshielded mains cables makes the cables behave like aerials that send short-wave interference beaming out over a wide area.

Unless interference of this kind is tightly controlled, it could spell the end for emergency short-wave communications. "A few extra decibels of interference from future networks and I would not have been able to hear the news from amateurs in Sri Lanka, India and the Andaman Islands," says Hilary Claytonsmith of the International Amateur Radio Union's UKbranch.

The threat began when the US government gave the go-ahead to broadband over power line (BPL) technology in October. And the European Commission (EC) is close to approving its own version, called power-line communications (PLC). The names are different but the technology is the same: broadband data is sent into people's homes as a high-frequency signal piggybacked on the 50 or 60-hertz mains supply.

## Unhappy coincidence

Because the mains is a noisy environment with ever-changing patterns of interference from sockets, switches, control circuits and electric motors in appliances, the power-line data must be spread over many high-frequency carrier signals if it is to be delivered at the 5 to 10 megabits per second that these services are aiming for.

The carrier frequencies used range up to 30 megahertz - which by unhappy coincidence is the radio band that travels best around the world. It is used for amateur radio, short-wave broadcasting (such as the BBC World Service and Deutsche Welle) and includes several dedicated emergency frequencies (see graphic).

Because these frequencies bounce off the ionosphere, they carry long distances, which makes them ideal for long-range intercontinental broadcasting.

When the US Federal Communications Commission (FCC) gave the go-ahead to BPL, it ruled that at frequencies up to 80 megahertz service providers must use filters on their household equipment. These could be set by a service engineer to chop out any internet transmission frequencies shown to be causing interference to any short-wave radio receivers nearby. The EC and the European Committee for Electrotechnical Standardisation (CENELEC) are trying to set similar filtering rules.

### Deciding on importance

But radio amateurs fear that the rules will allow the filtering to be lifted if it is having a serious effect on internet access speeds. The EC says it wants firm rules that balance "technical, social and economic" factors against the "importance" of services which suffer interference. But who is to decide what is more important, and on what grounds, the radio amateurs ask.

Michael Copps, the one FCC commissioner who opposed BPL, believes the organisation has made a rod for its own back. It is going to have to "work hard to monitor, investigate and take quick action" over any power-line internet interference to radio amateurs and others, he says.

Some technical fixes may be in the works though. The BBC, for instance, is developing a PLC modem that makes use of the fact that the short-wave frequencies for broadcast radio change throughout the day, as ionospheric conditions dictate. The BBC modem detects which frequency bands are in use at any one time - and filters them out. Such technology is not part of any PLC or BPL system currently in trials, however.

Jan 11, 2005

The ARRL has questioned the veracity and technical competence of the company operating a Westchester, New York, BPL field trial and faulted the FCC for not shutting the system down. In December the League renewed its request that the FCC rescind its Part 5 Experimental license for Ambient Corporation's BPL pilot in Briarcliff Manor.

A ROARING APPLAUSE!

Indeed few realize, thanks to the media, Kerry's dark and shady relationships with the Communist Party.

Huh?  The western world is "engaging" with many regimes so as to make a
buck. Oh sorry, I mean to bring them on side re democracy and freedom.

Works great. It doesn't matter what the gov't ideology is as long as you can make your money, though dictatorship apparently is the most efficient to trade with. The problem is that not all dictators are "our dictators" or turn into not being our's. Sadam was good, now he bad, Pinochet was good (and apparently is still good to some), Norega was good, became bad, Castro was never good though unless you're from the US the cigars are good and the beaches are nice, Sukarno and Suharto were both good in their day, Shah of Iran is good, Saudi Royal family is good, the apartheid regime in South Africa was a grand bullwork against the commies (Mandela was considered a commie, remember?). The other problem is that when people get the idea of freedom and self determination they don't necessarily want what the western world thinks they want.

Records sales of Freeview digital TV boxes over Christmas mean five million UK homes now have the service, the BBC has said.

It said up to 1.5 million boxes had been sold in the lead-up to Christmas, with 190,000 sold in each of the two weeks before the holidays.

The boxes enable viewers to pick up a range of digital TV and radio services

without paying a subscription.
Before Christmas 2003, 140,000 sets were sold each week.

Media watchdog Ofcom said 3.9 million UK homes had Freeview in September 2004.

This figure compared with Sky's 7.1 million subscribers and 2.5 million subscribers to digital TV service from cable providers such as NTL and Telewest.

Around a quarter of the Freeview sales in the last three months of the year were thought to be from households that already had access to digital TV.

"Free digital television has a huge appeal and shows no sign of slowing down," said Ilse Howling, the BBC's head of digital marketing and communications. Freeview is a joint venture between the BBC, BSkyB and US transmission firm Crown Castle.

The BBC released Freeview figures ahead of an Ofcom report into whether a switch to digital-only TV is attainable by 2012, the government's planned date for an end to analogue transmissions.

Sky has adopted a bold approach to try and poach viewers from Freeview. It will broadcast an episode of the fourth series of hit US drama series 24 on Sky Travel, available through Freeview, to tempt Freeview customers to subscribe.

It will be shown on 30 January, at the same time it is aired on Sky One.

~FOR IMMEDIATE RELEASE~

LIFESWORK: 2005 AND COUNTING - Radio Promo Tour begins 1/15/05

Leadoff track, "There's Nothing Like A Hit" is the first CD single! It's the ballad of Jimmy Miller and Joe Vig

Quotes on the new disc:

HARRIET SCHOCK
"I'm really enjoying your CD. "Nothing like a Hit" has a great hook. I think the title "2005 and Counting" is very clever considering who the artist is. :)! "
http://www.harrietschock.com

Harriet Schock is the legendary songwriter who penned the love theme to Berry Gordy's Last Dragon, Helen Reddy's hit "Ain't No Way To Treat A Lady" and much much more. Check out her website.

DICK WAGNER
Joe...I just finished listening to your CD and I can see why you want to release it. Very musical and very interesting. You are a child of rock /

60s  70s and it comes through loud and clear."

Dick Wagner's guitar made Lou Reed and Alice Cooper tours major events.
He
has written many hit songs  http://www.wagnermusic.com

SOME QUOTES FROM OVER THE YEARS

"Compact, catchy and completely charming"
Ken Barnes
PLAYBOY MAGAZINE

"..Well crafted melodic rock"
Roman Kozak
BILLBOARD MAGAZINE

Promoting the new album LIFESWORK: 2005 AND COUNTING
21 Tracks from Joe Viglione
http://therealcount.blogspot.com
http://thecount.blog-city.com

The aim of this tour is to promote the songs - Joe's personal
publishing -
of his Var Music, BMI catalog.

THIS SATURDAY NIGHT 1/15/05
WNSH  AM 1570    Saturday Night   6 PM - 8 PM

JOHN DUNN - A GIANT OF RADIO
BBC Radio 2 Tuesday 18th January 2030 - 2130

Presented by Chris Searle

John Dunn, who died in December, was one of the best loved voices on radio.
A stalwart of Radio 2 since it's earliest days, John presented a daily show
on the network for over 30 years.

This special tribute programme brings together many of those who knew John
through the years with archive material of the great man in his heyday.

Hear the programme again for seven days after transmission at
http://www.bbc.co.uk/radio2/r2music/documentaries/johndunn.shtml.

For sale:

(The "Radio Crazy" is baaaaakkk!) Hi!

Partial interest in LPTV CP for a very famous and important beach resort city in Delaware.

Delaware is the 7th fastest growing state and this proposed LPTV station is in the fastest growing county in that state!

This CP has been purchased by me (FCC approval pending)and I seek active or inactive investors to help fund the buildout of the station. This is a joint venture. There is an element of risk. You could lose all or part of your investment. You heard it first here, kiddies! (grin!)

$10,000 min. per investor. Nobody can own more than 49 percent. This means me too. We don't want a "bully-of-one" situation!

All investors would be on the board with full voting rights.

When you properly ID yourself, I will disclosed the city of license and other "secret" details.

Tel: (478)741-1710 in Macon, GA.

References:

a-My parole officer. Mr. Larson E. Rapp. c/o Zing Zing prison, Ossingstink, NY. Tel: 1-800-IMA-THUG.

b-Trade reference. Brazilian Bandit Airways, Oshkosh Airport, Oshkosh, WI. (Pilots will see the irony). Purchased a one-way ticket to Rio using all small and unmarked bill. Don't fret, your investment funds will not be deposited into my Swiss bank acct. until I safely land in Rio! (grin!)

(References are in jest. The deal is real!)

73,

Meyer Gottesman, W6GIV

17 January 2005
By Tom Pullar-Strecker

Radio New Zealand expects to step into the mainstream of online news publishing in February or March.

The state-owned broadcaster signalled in April that it planned to spend hundreds of thousands of dollars expanding its online presence and letting people listen to broadcasts at a time of their choosing over the web.

Chief executive Peter Cavanagh told a select committee that the website redevelopment was in its second phase and progress has been "wonderful".

Its revamped website will include online news, "some basic information about weather and finance" and "enriched information about programmes", he says.

This may include information that might be "some gateway to website links that our researchers have come across in producing programmes that we think our listeners might be interested in".

Mr Cavanagh says "audio-on-demand" will put the control of the radio schedule in the hands of the listener.

"I have very actively championed this project because I believe having a good, solid online service is now a fundamental part of core business for public service broadcasters.

"It is a bit unreasonable in this day and age when people are so time poor and they are under so much pressure to rely on them to be available to listen when we can broadcast programming live."

The audio-on-demand service is estimated to cost $259,000 to set up and $360,000 a year to run.

It's turning again at:

www.radio-info.net

They supposedly have worked to fix the .com domain problem above,
though the .com version is inaccessible for me as of this hour.

Subject: [Airwaves] Amateur Radio Under Threat in the UK

Andrew Moseley (G7VOT) on January 9, 2005

OFCOM are the UK's Regulator for Communications. And they have come up =
with
a pathetic plan called the Spectrum Framework Review.

After reading this please visit my Notice board here
http://g7vot.myikonboard.com/viewthread.php?threadid=3D20 and let me =
know your
opinion.

UK Hams. Your opinion counts in this matter don't just sit there and =
let
others act for you as it may not be enough. Amatuers outside the uk can =
help
too by emailing Ofcom here, contact@ofcom.org.uk and let them know what =
you
think.

Ofcoms Spectrum Framework Review has been given a thorough examination =
and
what has been uncovered is very very alarming. If you have not yet sent =
a
letter of concern to OFCOM, then reading the following may well give =

you a
kick up the butt to do so. Deadline is the 15th of February.

The following information is taken with thanks from the Chelmsford =
Amateur
Radio Society's web site.

It is also with a serious request to put pen to paper and reply to the =
Ofcom
Proposal. Failure to inform them that they are acting in a totally =
cavalier
manner, will result in the radio spectrum used by Radio Amateurs being
swallowed up by Mobile Phone Companies.

By the time that Ofcom realise their errors, the infrastructure will be
fragmented and the damage will be done. It should be realised that =
Ofcom is
now no longer Staffed by Engineers/Radio Amateurs, it is entirely =
Commercial
people with Mobile Phone backgrounds who are attracted by the =
possibility of
charging someone =A31m/MHz.

The phrase "If you do not use it, you will loose it" will be wasted =
unless
YOU put pen to paper.

Summarised Ofcom's 23rd November 2004, proposals for Licenses and =
spectrum.

o Spectrum Framework Review with a Deadline for replies by 15 February,
2005.

o Advocates total disregard of all International rules in the interest =
of
National flexibility

o Suggest that 60% of all spectrum is tradable

o Is in favour of Software/Cognitive Radio that could potentially =
operate on
top of
Radio Amateurs without warning

o Proposes to withdraw from CB, Amateur, Maritime licensing

o Proposes to simplify access to entrants - barely after the new =
Licence
structure is in place

o Has caught RSGB totally off guard, with a weaker structure

o All Radio Amateurs and Clubs are urged to reply with a copy to their =

MP
with a request that he/she questions Ofcom on their intentions.

o Original Documents on http://www.ofcom.org.uk
Be warned this is a massive document which seems as thought it has been =
made
deliberately big - the cynical would say "to stop people reading it"! =
It is
OK for Broadband users.

o Easier to download from www.essexrepeatergroup.org.uk

Many of the threats are TLAs (Three Letter Acronyms) so here are some:-

o PSB - Public Service Broadcasting

o DTT - Digital Terrestrial Television

o DRLs - Digital Replacement Licences

o SFN - Single Frequency Network - BBC/National DAB is a SFN

o DVB-T, DVB-H - Digital Video Broadcasting

o DAB-S, DAB-T - Digital Audio Broadcasting (Satellite, Terrestrial)

o SFR - Spectrum Framework Review

o ACC - Adaptive Cruise Control, - uses SRR and LRR

o SRR/LRR - Short /Long Range Car Radar on 79 or 24GHz

o UWB - Ultra Wideband

o SDR - Software Defined Radio

o A whole new set of threats is on us now. . .

o Most attention so far on Broadband over Powerlines

o BPL - Broadband over Power Lines - USA

o PLT - Power Line Telecoms - UK

o Data can be Voice, Internet or TV

o In use by Southern Electric

o Raises noise floors etc over most of HF bands

From: "Mike Terry" <miketerry73@btinternet.com>
Subject: [Airwaves] Commercial radio unites for tsunami fundraiser

Eight of the UK's radio giants have collaborated to suspend their =
schedules
for 12 hours on 17 January in aid of the Asian tsunami appeal.

Emap, Chrysalis, Guardian Media Group, GWR, Scottish Radio Holdings, =
Capital
and Virgin have created UK Radio Aid - a move which will see a special
one-off programme broadcast from 6am from Capital's London =
headquarters.

The special 12-hour show will be guest presented by two DJs every hour =
from
across the networks.

Content will include contributions from musicians, sports and TV stars, =
and
politicians.

The networks that have agreed to the deal have pledged to donate a =
single
day's profits to relief programmes associated with the tsunami.

Mark Story, chairman of UK Radio Aid, said: "I am immensely proud of =
and
grateful to our colleagues across commercial radio who when asked for =
an
extraordinary response to this disaster were all in immediate agreement =
to
unite for this very special day."

Real Madrid and England striker Michael Owen added: "This is a tragedy =
that
has touched everyone and it's important that the giving continues. It =
will
take years to restore the communities in these countries and we should =
all
do our bit to help.

"This is a great idea which reflects the value of working together to =
help."

Wow.  That is actually the best news I have heard in ages.... actually
requiring accurate domain contact information is something that SRI did
and which really hasn't been done at all since NSI took over the domain
database.  In more recent years most registrars haven't even vaguely
attempted to keep the contact database accurate, which makes it pretty
much impossible to track down and stop spam sources. =20

>I guess the disco ball has stopped turning, at least temporarily.

radio-info is a legitimate site and I don't think they'll have any =
problem
getting the database fixed.  But hopefully a lot of less-than-legtimate
sites
will be pulled down as well.

The .com version is now redirected to directNIC.com, the registrar with whom they are having some sort of dispute.

> registrar about the legitimacy of the contents of their whois record.
>=20
> Scott Thomas of Zeo Radio tells me in e-mail that they are working on =

> resolving the problem.

Well, today it looks like the domain registry information has been=20
restored:

Registrant:
 Zeo Corp
 Corporate Offices
 Denver, CO 80112
 US
 720-404-8342

Domain Name: RADIO-INFO.COM

Administrative Contact:
 eh, zc eh@neverending.biz
 Corporate Offices
 Denver, CO 80112
 US
 720-404-8342

Technical Contact:
 eh, zc eh@neverending.biz
 Corporate Offices
 Denver, CO 80112
 US

```
 720-404-8342

Record last updated 01-10-2005 07:25:20 AM
Record expires on 01-28-2008
Record created on 01-28-1999

Domain servers in listed order:
 NS0.DIRECTNIC.COM 204.251.10.100
 NS1.DIRECTNIC.COM 206.251.177.2

Now all Zeo has to do is restore the name service, and radio-info.com=20
should be back in business.

Actually, the CPUSA went out of their way not to support Kerry.  Since they
weren't running a candidate, they basically had a statement saying that they
could not support any of the existing candidates, but whatever you do, don't
vote for Bush.  That is a far cry from supporting Kerry.

>I can assure you, that some day, we... well, my generation will give our lives

I hate to tell you this, but when it comes to support of the Chinese communist
government, Bush is going pretty strongly himself.  Not that he has any choice,
mind you, since their economy is rolling downhill, but he could at least make
some pretence of trying to control it.

Just under 3 minutes? Many of them in that time period just barely broke
the 2-minute mark. 2:20-2:30 would have been more the norm, with 2:50+
being a bit of an eyebrow-raiser.

I looked at a Herman's Hermits CD the other day that I think contained
16 tracks, 38 minutes total.

One use for RCI Sackville's transmitters : transmitting the VOA Persian and VOA Arabic services to the Americas.

It seems that (VOA) IBB transmitters are too busy transmitting (IBB's) Radio Marti to bother to transmit VOA Persian and VOA Arabic 24 hours a day to the Americas.

Radio Marti is geopolitically (moot and pointless) on SW.
Radio Marti was not set up to transmit on SW at the time of its creation.
MW was (exclusively chosen) at the time for sound geopolitical reasons.

It goes without saying:
The Cubans have no desire to delete out of existence various US cities with high killing power weapons.
In comparison to Islamic extremists -- Castro's Cuba is a loyal US ally -- in the way the UK is a US ally.

Using existing 1500-1700 kHz (omni?) directional MW transmitters [in use by existing US stations] in the South and Southwest to transmit Radio Marti would be just as effective as the current SW + MW approach.

Even if Cuba did decide to jam the MW transmissions, barrage broadcasting on MW would quickly defeat that.
MW barrage broadcasting is infinitely adaptable, and the (IBB) BSEE's would have a very interesting workload.

The current 100 kw MW Radio Marti transmitter could be switched off, as polar ice cap melting will inundate the coral atoll that the IBB uses to transmit Radio Marti on MW. The US, by operating this 100 kw MW transmitter is violating the US-CAN-MEX 50 kw [power limit] MW transmission interference treaty.

My suggestions don't significantly ratchet up the level of oscillating antagonism that exists between the US and Cuba.

In closing:
TV Marti -- that government department should be reserved for the children and friends of the (Republican) Upper and Ruling Class Cubans in South Florida. Without TV Marti the US Republican Party would have no way to hand out political favours to the children of its Upper and Ruling class supporters in South Florida. TV Marti was never set up with being a real TV broadcaster in the 1st place, in the way that typical US broadcast and cable TV broadcasters are set up.

CBC TV's "The Beachcombers" had more destructive political effects in the GDR (E Germany) than a substantial amount of the hard political broadcasting into E Europe at the time. You don't need hard political broadcasting to achieve a political effect -- a moral lesson forgotten during a lot of the cold war.

rec.radio.broadcasting:2410

Greetings from The Crystal Ship! The somewhat-political shortwave radio pirate from the early 1980s, noted in Andrew Yoder's "Pirate Radio" books (search on Amazon), is again active in the New Millenium.

We are active on chosen Saturday/Sunday mornings after local sunrise (usually between 1300-1600) on 6855 kHz, after the sign-off of WYFR; sometimes before sunset on the same days and frequency (2000-2300). We sometimes use 4070 kHz after local sunset (2200-0300 UT), although now less frequently due to noise levels at that frequency. There are also other less-predictable times and frequencies. This is our Winter schedule.

Transmissions are made in AM mode, via a pair of realigned Knight T-150A transmitters with outputs slightly in excess of 100 watts. (This is the same model transmitter which we owned in the 1980s, although much cleaner/better serviced examples). A Johnson Viking Valiant transmitter with an output of 150-200+ watts is soon to be put into service.

The Crystal Ship keeps an E-mail list which we use to notify past/potential listeners of pending broadcasts and frequency. (These are usually sent just prior to the commencement of the transmission, for obvious security reasons.)

We would like to invite anyone and everyone interested in monitoring our broadcasts to JOIN OUR EMAIL LIST! You will then receive Email notices of transmissions and frequencies, and increase your chances of "catching" our shortwave pirate station.

We won't load your box with SPAM; notices are generally limited to once a week, or less. To join our email list, just send your request to: tcsshortwave@yahoo.com, and you'll be "in the loop"!

If you are interested in hearing pirates or just the whole "pirate radio scene," we strongly recommend the following boards:
http://www.frn.net/vines/

This is the primary message board "hangout" for pirate radio station operators in North America, but especially shortwave pirates. There is general discussion of shortwave pirate issues, LPFM and FM pirates, and---- UP-TO-THE-MINUTE LOGGINGS of Shortwave Radio Pirates!!! (Checking here frequently should up your pirate "score" considerably!)

Recorded audio of countless shortwave pirates, including ourselves, is in streaming MP3 format from this site:
http://www.piratedxer.com/archive.htm

We will QSL reception reports from the U.S. which are sent to our Email address, via return First Class Mail, no return postage required. Mailed in reports for The Crystal Ship should be sent to:

The Crystal Ship, P. O. Box 1, Belfast, New York 14711-0001

Snail-mailed QSL requests from the United States should include two first class stamps. Those outside the United States should include two International Reply Coupons, or One US dollar.

Looking forward to hearing from you, "The Poet" and "The Radical"

Why, like clockwork, does WFAN 660 NYC, received 500 miles west in Central Ohio,  fade away at (nowadays) 6am and later come back strong for another hour?  They're strong again like a local at almost 7am now, for instance.

Not just a random once-in-a-while thing, but regularly.

My guess is that it must be a switch in the height of the reflecting layer somehow, but I can't construct a really consistent picture.

MW always reflects, but the attenuation varies at lower levels with solar angle, sun killing off the reflected signal.

It's not ``grey line'' because that path is nowhere near the direction involved.

hi, I have a quirky connection where i am but it does work, though occasionally it requires "reloading" of webpages, downloads, etc.  My problem is that ipodder and some of the other programs i have tried using (doppler, jpodder, etc) don't seem to do retries.  In the ipodder log i get a bunhc of time outs (i appended part of the log from ippoder).

Is anyone else having this problem? any ideas on how to get around this (other than getting a better connection?)

Thanks,

-Gaiko

Julia Day, radio correspondent
Friday January 21, 2005

Sales of digital radios have passed the 1m mark with the number of sets sold at Christmas doubling year-on-year.

There are now 1.2m digital radio sets in Britain, with predictions that another 1.2m will be sold this year.

This beats the 1m target set by the Digital Radio Development Bureau at the beginning of 2004.

Official sales figures for December are not yet available but the John Lewis Partnership director of buying, Dan Knowles, said sales of digital radios at his stores were up by 57%.

The Dixons managing director, Nick Woods, said: "Radio renaissance in the UK brought about by the development of digital radio technology has gathered pace this year."

And the gap between sales of analogue radios and DAB digital models is closing fast.

One retailer reported that digital radios accounted for 30% of radios sold at Christmas, compared with Christmas 2003 when digital sets made up only 15% of sales in comparison with 85% of the market for analogue sets.

The DRDB chief executive, Ian Dickens, said the group forecast a further 1.2m sets would be sold in 2005:
"In a Christmas season, where retailers struggled in traditional sales arenas, everything digital sold well with DAB digital radio sales more than doubling year-on-year," added the DRDB marketing director Mike Spencer.

The surge in sales of digital radios was boosted by an explosion in the types of products available - from 53 in 2003 to more than 130 in 2004.

The price for the cheapest set halved to around �50, making the sets more affordable to mass market consumers.

www.chinaview.cn
21 January 2005

BEIJING, Jan. 21 (Xinhuanet) -- The X 7.9-grade solar flare that occurred around 0701 GMT Thursday interrupted short-wave radio transmission in China, said a Chinese expert.

"It is the largest solar flare this year," said Suo Yucheng, a noted researcher with the China Research Institute of Radio wave Propagation (CRIRP). "Radio waves were absorbed by the strong F layer created by the flare."

CRIRP detected wide-range suspension of short-wave radio signals in its observation stations in Beijing, Guangzhou, Hainan, Lanzhou and Urumqi until after 0900 GMT Thursday.

Solar fare produces mass ejection of highly energized particles from the sun. Thursday's fare is more intense than three previous ones on Jan. 16, 17, and 19, all at X-grade. X is the highest grade of the five-grade classification system, namely the A, B, C,M and X grades.

"Solar flare may also be the factor that interrupt the communication of China's expedition team in Antarctica with the outside world over the past two days," acknowledged Suo. "The influence of solar flare is even stronger in polar areas."

I'd be inclined to think that it's the F1 layer reforming, since the sun's already
up
east of Ohio, and before the E-layer reforms, considering how low the sun angle is
```

```
right now.  I'd expect a lot of fading with your first suggestion, but not an
outright "fade away".  I think you'll also find that AM radio rarely will skip
more
than once before it becomes unusable.

It might be a slow lowering of the reflective height as the sun comes up on
the ionosphere, leading to a gap between one hop vs two hop coverage, and
nothing to do with absorption, I guess.

My puzzlement came from not seeing how absorption could be doing it.  Maybe
it isn't and it's just geometry.

For what it's worth, on Thursday PM I thought my R75 radio had suffered
mysterious damage. So over to the backup Zenith, pulled up the
Transoceanic's five foot whip, and everything on HF was dead there too.

Whew what a relief, it was conditions not the rig. Then online at one
of the propagation sites I read this would probably be the worst one
day wipe out of the entire sun cycle! Tonight (Friday) bands are most
excellent, e.g. 75 meters, etc :).

ONe thought is that the station goes to full power, allowing a bit
of extra reception even if propagation has declined?

I think I've noticed something like this myself, though on other
stations, but I haven't been up that late recently to have it
fresh in my mind.

Michael

The FCC has fined a Jacksonville, Florida, CBer $10,000 for transmitting without Commission authorization. The Commission released the Forfeiture Order (NOF) to Tommie Salter on December 27. The FCC says that in March 2004 its Tampa Field Office, responding to interference complaints, restricted Salter's hours of operation.

The FCC lifted the quiet hours two months later, providing Salter "operated in full compliance with the Commission's rules." When interference complaints resumed, the FCC last July 15 again notified Salter it was restricting his hours of operation. The FCC NOF said a family member signed for the notice but that Salter told Commission officials he had not read it. As a result he transmitted while his operation was prohibited--between 6 AM and 11:59 PM.

An August 2004 station inspection of Salter's CB station revealed that he was operating a non FCC-certificated transmitter, in violation of Part 95 rules. A Notice of Apparent Liability (NAL) proposing the $10,000 fine followed in October. The FCC's NOF upholds the fine, despite Salter's protests that his violation was not willful because he did not understand that use of non-certificated transmitters violated the rules and did not know about the reinstated quiet hours. Salter also claimed he couldn't pay the fine, but the FCC says he failed to provide tax returns or other necessary documentation to back up that claim. The FCC authorizes CB operation "by rule"--essentially a blanket license.

This DVD documentary tells the story of the landbased "pirate" radio stations that took over when the popular offshore stations were forced to close.

See and hear again some of the top stations like Radio Jackie, Radio Kaleidoscope, Invicta and Skyline - and meet the people who made them happen all those years ago. The documentary contains early video footage of some of the stations as well as recent interviews with their operators.

�15.75 from 426 Archway Road, London N6 4JH making your cheque payable to Radio Caroline Supporters Group (a very worthwhile cause, keeping Radio Caroline broadcasting after 40 glorious years - Mike).

Sat 22 Jan 2005

By Karen Attwood, PA

Massive amounts of radiation being spewed from the sun could cause disruptions to satellite communications in the UK, scientists warned today.

Effects of solar storms have been seen on Earth with brilliant auroras spotted over parts of the country last night.

Reduced mobile phone, radio and television reception or even power cuts could be some of the problems caused by the large solar flares unleashed following a colossal explosion on the sun last week.

Peter Bond, spokesman for the Royal Astronomical Society said: "Flares can affect short wave communications and satellites in the earth's orbit which could mean problems for phones, television and radio signals.

"The flares have caused a huge amount of geo-magnetic activity as the magnetic field takes a while to settle."

This is the largest radiation storm since October 1989, according to experts.

Solar flares occur when energy stored in magnetic fields above sunspots is suddenly released.

Communication blackouts have been reported in parts of North America and northern Europe.

The two-man crew on the International Space Station were forced to sleep away from their normal quarters when their orbit took them through the worst of the storm - exposure to high levels of radiation can lead to health problems such as cancer.

19 January 2005

In the largest co-operative effort in the industry's history, American radio companies have agreed to spend $28 million on a six-week marketing campaign to convince the public to listen to the radio. Faced with competition from the new satellite radio services that already have 4.5 million subscribers, and from internet radio which Arbitron says attracts 4.1 million listeners, this radio industry promotion is based around the tag line "radio - you hear it here first".

January 22, 2005

Winter Park, Florida (AP)

The disc jockey at Rollins College's WPRK-FM unofficially set a record Friday for the world's longest continuous broadcast by a single DJ. Plotkin, 25, took to the airwaves at 9 a.m. Monday, and signed off at 11:03 p.m. Friday, a 110-hour span. A DJ in Switzerland lasted 105 hours in July 2002.

"Everything I did, every facet of my life for the past five days, I was broadcasting on the radio with a wireless (microphone) or here in the studio," Plotkin said Friday evening in the seconds before reaching Hour 106 and breaking the old record. "I miss the outside world."

The event, planned for more than a year, raised $19,638 CDN for the 52-year-old radio station. The broadcast, which also went out over the Internet, drew donations from as far as Peru.

It will take Guinness, keeper of the world's records, four to six weeks to validate Plotkin's feat.

Under Guinness' rules, Plotkin had to speak at least once every 59 seconds. And there was no napping while "In-A-Gadda-Da-Vida" played - songs could not be longer than six minutes.

In between spinning CDs from indie rockers, Plotkin hosted local bands, interviewed artists and civic leaders, gave interviews himself and took cold showers in a stall built down the hall from the studio.

He was watched by medical professionals, journalists, friends, family and assorted well-wishers.

Toward the end he tried to put CDs into closed trays, banged his head on the microphone and forgot his station's call letters.

"I'm a lab rat," said Plotkin, his face unshaven and his eyes fading in and out of glassiness.

I've seen that happen with other stations.  But WFAN is 50000U1 - that
is, they run the same power (and (non)-directional pattern) all the time.

This week and already online at www.justofftheradar.com:

We talk to Jeff Clark, editor of Atlanta's Stomp and Stammer as we look back at some of the best indie releases of 2004. Plus we check out the following tunes:

JEFFERSON AIRPLANE - "SHE HAS FUNNY CARS"
PARIS COMBO - "CALENDAR"
FIERY FURNACES - "SING FOR ME"
ARCHER PREWITT - "LEADERS"
THE BLACK OUTS - "SOMETHING...I CAN'T SAY"
HOLLY GOLIGHTLY- "THE LUCKIEST GIRL"
JOANNA NEWSOME - PEACH, PLUM, PEAR"
THE FALL - "GREEN EYED LOCO MAN"
LOW - "MONKEY"
PLAYGROUP - "BRING IT ON"

The FCC says that in March 2004 its Tampa Field Office, responding to interference complaints, restricted Salter's hours of operation.

How can the FCC levy fines on CB operators when no licenses are issued for the CB service anymore?

GTT

# AL FRANKEN'S HATE RADIO

By David Grossack

I have always enjoyed Saturday Night Live. Al Franken is clearly a gifted and entertaining comedy writer and performer. His movie based on the character Stuart Smalley was one of the funniest and underrated films of its day.He is also funny and engaging in person, and once I even trekked into Harvard during a snowstorm to see him at the Kennedy School of Government give a hilarious presentation about political commercials. My friend and I arrived a bit late. Franken looked ut us for about 30 seconds like a disapproving professor.

But when it comes to politics, Al Franken is the Josef Goebbels of the Democrats, a creator of a demented propaganda machine, the Air America radio network, that is vicious, defamatory and hateful to near insanity in its ceaseless output of anti-Bush, anti-American, and anti-patriotic rage that sends outrageous messages to the audience,messages based on lies, half truths and distortions that subtract from the positive career that Franken had built at SNL..

There are five clear messages that Air America's talkmasters aim to get across.

1.: "George Bush is not intellectually competent to run the country. He is closely supervised by emissaaries from corporate America who are the real masters of the country."

Well, I always thought that assembling a strong and capable team was the sign of a capable manager and George Bush is proving himself well. He inherited an economy in trouble from September 11, the collapse of the dot-com bubble , outsourcing and powerful competition from China. He inherited a security nightmare from President Clinton who preferred dalliances with Monica to accepting Sudan's well documented offer to turn Saddam Hussein over to us. That America is bouncing back as well as it has is a credit to the President. The voters, to Franken's chagrin, agreed.

2. "The Iraq war was launched by "retarded neo-cons" (sic)  planning to enlarge the war into Syria and Iran." Wisely omitting the ethnic slurs and anti-Zionist rhetoric bigots such as Patrick Buchanan hurl at the supposed neo con cabal, the Franken network instead focuses on the theory that Weapons of Mass Destruction were never in the hands of Saddam Hussein, and the preposterous allegation that Iraq had never been involved in terrorism.

Franken's gang of liars ignores the fact that one of the criminals who hijacked the boat Achille Lauro and murdered Jewish American Leon Klinghoeffer by pushing him overboard was living comfortably under Saddam Hussein's protection when America invaded Baghdad.

Similarly, terrorist Abu Nidal was living in Baghdad. This miscreant had bombed synagogues in Vienna and Istanbul and the El Al terminal in Rome. Perhaps John Kerry and  the French don't see that as terrorism, most Americans do.

Using the proceeds of the United Nations Food for Oil program, Saddam Hussein was funding Hamas, the band of thugs whose idea of being freedom fighters is to bomb Israeli children at pizza parties and bar-mitzvahs. Again, franken and his pal Stephanie Miller make constant about how the senselessness of attacking Huissein. Putting the man out of business was a service to humanity.

Evidence aplenty indicates that acquiring a nuclear devioe and chemical weapons was a past policy of Saddam Husssein. There is a possibnility that these weapons were transferred tio Iran, Syria, Sudan or the Lebanese Hizbullah. We just don't know.

3." Americans who do not agree with the Franken agenda are stupid. People who live in so-called Red States are incapable of deciding things properly and should let Al Franken and Stephanie Miller bring them abortion on demand, surrender in Iraq and French input into our foreign policy decisions." So what if French indsutry was making billions off Saddam and French pols and journalists accepted his bribes, the French are our cultural betters, any ol' mule knows that.

4 "People who do not agree with Franken and Stephanie Miller are morally inferior to those that do. Republicans are wealthy, heartless, complacent folks who would just as soon see the rest of the world starve than give a penny to charity."

In fact, most Republican voters are poor people in the Bible Belt who give far more to charity than those who live in liberal states like Massachusetts, Connecticut or New York.Conservatives in Mormon,  Utah are the kindest, most generous (and polite) people I have ever seen anywhere.
They tithe to the Church, which provides a huge safteynet for both Mormons and nonMormons around the globe.

5." The Bush Administration is not lawfully in power.": The Stephanie Miller/ Al Franken Braintrust claims to have information that the

Supreme Court decision declaring Bush president in 2000 was a corrupt decision and the current eelction ws the result of vote fraud. Like the schnook on the Daily Show who rolls his eyes around and smirks when discussing Bush, Rice and Rumsfeld, Al Franken, not Rush Limbaugh, is an idiot.Bush first came to  power because the Supreme Court determined he was the lawful winner ;the second time the voters made their choice unequivocally clear. Get used to it, Franken, you've been picking losing candidates who the American people reject because they are seen as not strong enough to deal with these country;s challenges and because their values are , well, too liberal for the tastes of tens of millions of voters. Too bad, but that't the way it really is.

Franken does not see that his intolernce is a form of fascism, Rather than offer discussion of the allegeddly posituive beenfits of the Humphrey or Mc govern style of liberalism that would accrue iftheir choices became elected, all Franken and his sidekicks can do is spew venom. I do suspect that Al may even be off balanced, witness his weird encounter with Bill O'Reilly at a public forum. Maybe now I'll call him Weird Al. May be the name will stick. May be he'll get sick of name calling and decide to grow up and have a rational discussion without insulting people who disagree with him, without tearing apart our President, and without inadvertently giving  comfort to the Islamic fascists who would behead him in a moment of they could.

The writer was wrong. XM is commercial free on all music channels. They run ads and promos on things like CNN's audio feed when the cable channel goes to break. Same for the talk shows that are also run on regular radio stations.

I don't find that a problem. It's not like XM is going to get a talk show host to keep talking during a commercial break.

This week, the BBC re-launches its internet Radio Player to make almost every BBC Radio programme available live and on-demand for seven days after broadcast.

Latest figures show more than 10 million hours of BBC radio is consumed online per month and, from tomorrow, the new Radio Player will offer 500 extra hours of programming and offer a range of new features.

The re-launch puts audiences in control of their listening, allowing them to listen at convenient times, control their schedules and fast-forward through programmes.

The new Player provides all the programmes and benefits of the current model - which makes many of the BBC's radio programmes available online - but includes over 80 more programmes, making virtually all of the BBC's national radio output available on-demand via the internet.

The new Radio Player also features live streaming of every one of the BBC's English local radio and national stations: Radio Scotland and Radio Nan Gaidheal; Radio Wales and Radio Cymru; Radio Ulster and Radio Foyle; all 40 of the BBC's local radio stations.

The improvements follow 30,000 emails received from listeners about the Radio Player since it first launched in June 2002 and record online listening figures.

For the first time it will also be possible for listeners to stop a programme at any point, switch off the computer and then resume listening from that point at any time during the seven days the programme is available.

Perhaps because he got a could offer and believes he can't afford not to?

I moved my (then) two kids and my wife from Ohio to California in the summer of 2003... from the Cleveland area where I grew up.

By operating a transmitter in violation of FCC rules.  You might find the same reaction were you to operate a high-power transmitter in the home-use bands, which also don't require a licence, not that that would make any sense except to annoy the neighbours.

Al Franken and Air America are great.

On 46 stations, nationwide, and growing, beating the Druggie whenever
they go toe to toe with him. They are the biggest streaming operation
in the Internet, and on XM and Serius Radio, everywhere.

Let the truth come out.

The last couple nights, I have heard a strong Spanish speaking station on 1570 here in the Des Moines, Iowa area. I haven't been able to catch the call letters.

I understand that in recent years, although XERF is licensed for 50,000 watts, it has been limping along at 10,000 watts. Of course 50,000 watts is nothing compared to the power they ran in the "border blaster' days.

Back up for a second, you're missing the bigger picture: $10K FINE FOR A CB'ER!!

This regime at the FCC is totally out of control. They have become the speed trap in the small town with the hanging judge. Time  to get back to the serious business of regulation and stop playing to the cheap seats with all the grandstanding and outrageous fines.

Pretty patronising, that passage.

What is that rule, where using a reference to Nazi Germany invalidates the
arguer's
position?

Oh, Lord. Monica never sleeps. And we all know how accountable the Bush
administration has been for the damages they've inflicted on the economy, from
record-shattering current account and budget deficits to the wholesale pruning of
employment rolls for the sake of their corporate sponsors. They blame it on
Clinton.

There's that Nazi/Fascist reference again.  This schmuck doesn't even know the
difference between left and right.

> David Grossack is a writer and lawyer in Hull, Massachusetts. See his
> website at usaexposure.com

Well, that goes a long way to 'spainin' why he thinks this way....

Some people like Fords and some people like Chevys. I hear hate and venom when I listen to Rush, O'Reilly, Coulter and Ingraham.  I guess you deem those folks patriots. I don't.

The news this morning suggests the new bill for the war is up to $300 billion. Great. Any guess on what the final price tag will be? I'm not talking about the vet benefits that will be paid out over the next 75 years, just for the immediate future. Isn't it starting to look like we are going to have 150,000 Americans caught in the middle of a civil war?   This has the possibility of being the worst foreign policy mistake in US history.

Winning an election does not include a grant of sainthood.

If Bush and company had told the American people "We are going to spend a trillion dollars and have 5000 American deaths and another 25,000 wounded. What we will end up with is an Islamic Republic closely allied with Iran."  Would he have won the election?

I believe there is permenate injury being done to the country. Blame it on Clinton.

Al Franken is not all that weird. The American people may get weird as this scenario unfolds.

I'm not going to argue politics with you over Al Franken but and it's a key "but", donating money to a church for operation of a church is reported more by the poor in "red" states than in "blue" states for tax purposes.  It's not actually clear that poor folks in either set of states actually donate more for religious use, just that reporting makes one seem more generous than the other.  I note that "blue" states do have more in the way of per capita income and that too seems to correlate with less obvious religious giving by the wealthier.

January 25, 2005

Pop pirates could soon be broadcasting sounds of the swinging sixties again from off the Suffolk coast - but this time they would be entirely legal.

There would be no need for the authorities to hunt them down and run them out of British waters, or cut off their food supplies or warn people not to listen, as they did in the 1960s when Radio Caroline ruled the waves.

For this time the ship would be sending out its radio signal under an official licence - as the new radio station for Ipswich, Felixstowe and

Woodbridge.

Ofcom, the Office of Communications and radio licensing body, has announced it will advertise a licence for a new commercial station in June with the deadline for bidders for the licence in the autumn.

Radio enthusiast Shaun Brown is hoping his proposals for an offshore station will secure the new licence.

Mr Brown of Bredfield said: "The era of the pop pirates was just fantastic and everybody loved the music and the jingles and the romance of them being at sea and broadcasting in that way.

"I would love to recreate that era and atmosphere, though this time it would be completely legal. There is something very magical about the thought of radio being broadcast from a ship.

"The station - if it got the go-ahead - would play all sixties music, which I feel would be very popular. We would have jingles like those of the sixties and give people a real flavour of what it was like.

"It would be very different to the two local radio stations we currently have - and that is very important.

"But I think people would be very interested and really enjoy it. We would be the first legal offshore radio station.

"I would also like to arrange boat trips so people could come out to visit the radio ship and have tours of the boat, meet the DJs and see them at work - I feel that would attract lots of interest."

Mr Brown, who has been involved in radio stations, including community radio, in the area, is bringing together a partnership of five to form a company to run the station and drawing up a business plan to submit with his licence application.

The idea would be to have the ship anchored four miles off Felixstowe.

The MV Communicator - once used to broadcast cult radio station Laser 558 to around 10 million listeners across the south east of England and Europe - is up for sale and talks are to take place with its owners.

Mr Brown said: "The licence is for an audience of around 500,000, but we would be keen to see if we could also get on to satellite."

The new station is expected to go on air in 2006.

Ipswich Local Radio, a consortium run by businessmen and radio experts, has also announced a bid for the new licence for a station with a music policy close to Radio Two but also giving local news and information.

The lack of a license requirement doesn't mean there is a lack of rules.

The same way they COULD levy fines on people using touch lamps and
dimmers that violate Part 15 requirements.  Or pirate broadcasters,
who also produce emissions but are not licensed to do so.

Oh yes they can! You can be fined for violating the rules issued for that
particular radio service, regardless of any license requirement. Most likely
the CBer was using a linear amplifier to boost his signal. Another case in
point, an owner of a VHF marine 2-way radio was fined for using it at a ski
resort. Reason? The radio was not on a boat in the water.

XERF is licensed for 250,000 watts, the power they ran decades ago as a border blaster.

They ran 17,000 watts for many years after being purchased by IMER, the Mexican Government's rural and indigenous radio agency. Just recently, some 6 months ago, they raised power again to 100 kw. There is some feeling that they run 10 to 25 kw days, and 100 kw at night. In the 60's, they only operated 6 PM to 6 AM, with no daytime broadcasting.

Hmm. Sounds like Air America is taking lessons from Neo-Conservative Talk Radio. Since anti-American and unpatriotic are subjective things there's another lesson learned. "America, love it or leave it" is about as un-American and unpatriotic as you can get. Neo-Conservative Talk Radio has gotten enough mileage out of that old cannard to circle the universe several times.

>1.: "George Bush is not intellectually competent to run the country. He
>is closely supervised by emissaaries from corporate America who are the
>real masters of the country."

OK. Where's the problem there? It appears to me both are true. The latter is so obvious in any kind of politics (known as special interests) that few even bother to argue the point. Both parties bitch and moan about it as they cash the checks.

>Well, I always thought that assembling a strong and capable team
>was the sign of a capable manager

When the citizenry are the beneficiaries, yes. When corporations get special treatment and citizens either suffer or are ignored, no.

>2. "The Iraq war was launched by "retarded neo-cons" (sic)  planning to

>enlarge the war into Syria and Iran."

Doesn't seem to be a problem. The general consensus is that Iran is our next invasion target to force them to stop nuclear activity. Once we've secured the Iraqi oil for friendly, political money contributing, oil companies we can move on to Iran and liberate the population the way the Shah did. The place looked good but there were a lot of people in political prisons. Besides, Iran is a threat to that precious oil. The general belief is that they want to export their religion to an old enemy. No room for Fundamentalist Christianity. Can't have that.

>Evidence aplenty indicates that acquiring a nuclear devioe and chemical
>weapons was a past policy of Saddam Husssein. There is a possibnility
>that these weapons were transferred tio Iran, Syria, Sudan or the
>Lebanese Hizbullah. We just don't know.

We were told they were there. That's why we went in. Since when does a country start a preemptive war based on "We just don't know?" I think Sweden is plotting to lure all our skiiers to the Alps. I just don't know but we probably should level those mountains to peemptively destroy the competition.

>Franken does not see that his intolernce is a form of fascism,

Then he's becoming a professional talk show host much faster than I ever expected. Soon he'll be able to hold his own with Limbaugh, Savage and Hannity. They perfected the form.

> I do suspect that Al may even be off balanced, witness his weird
>encounter with Bill O'Reilly at a public forum.

I thought it was funny. Clearly an attempt to bait O'Reilly who got suckered in. As an attorney you're well aware that a settlement after huffing and puffing about taking an issue to the supreme court and beyond is schtick, you should be suspicious that the charges leveled against him were probably true and there was much too much to lose by litigating. Just like Michael Jackson - settle and seal their lips and close their hips.

>May be he'll get sick of name
>calling and decide to grow up and have a rational discussion without
>insulting people who disagree with him, without tearing apart our
>President, and without inadvertently giving comfort to the Islamic
>fascists who would behead him in a moment of they could.

That's a little too heady for me. If Limbaugh and other neo-cons had been willing stop tearing apart our president I might see this a legitimate request. They didn't. They ripped him to shreds as a group for two full terms.Why is it now a bad thing? "Giving aid and comfort to (name your group)" is so old it squeaks.

Once Talk Radio turns into "a rational discussion without

being insulting to people who disagree" it'll be dead and we can get
Easy Listening back as the #1 format.

>David Grossack is a writer and lawyer in Hull, Massachusetts.

Oooh! Not many ambulances in Hull? My ex-wife used to teach there. It
was one of the East Coast's largest amusement parks.There should have
been plenty of personal injury claims. I guess those have died off.
WBZ's transmitter site is there causing bubbles in the mud.

Not much worse than a talk radio groupie lawyer who sees only one side
of the industry. Do an exercise. Pretend you're defending Air America.
Listen to neo-conservative talk radio and see what kind of case you
can make that won't have a jury clutching their sides in laughter.

> A CB'ER!!

What's the fine for unauthorized and unlicensed transmission?  If the

```
CBer's output exceeded about 5 watts, then it's unauthorized and
unlicensed.  If said CBer's operation caused interference to licensed
or authorized services, then said CBer sure can be fined, just as those
who transmit with 200 watts on 88.2 can fined also.

Are you kidding, 10K is a relatively small fine and unlike speed trap
towns, most folks given a NAL can get out of paying the entire fee by
demonstrating no capability of paying.  The FCC is not a major source
of funds for the federal government, the cost of collecting fines for
example is relatively high when individuals are fined.=20

Those fines are nothing new. I recall $10,000 per incident fines going
back to the days we had duels in Texas because someone would yield to
a "breaker." Before the great CB revolution.

There are several different reflective layers. The F1 and F2 layers
are the primary ones for shortwave, but on 660 KC the lower layers
may be coming into play as well. Since they are at different altitudes,
as they rise and fall you may find some times when you are getting a
strong F1 reflection, then a dead time, then a strong F2 reflection.

>MW always reflects, but the attenuation varies at lower levels with

```

This is the former home of Laser 558. The MV Communictor is currently
situated in St Margarets Hope in the Orkney Islands.

The ship has a 200 ft radio transmission mast along with 4 generators and
engines needing attention.

The MV Communicator was vandalised during her time in Holland and requires
some TLC.

Steeped in history there are only 2 working radio ships left in the World.

Recently used as The Superstation this piece of broadcasting history is a fantastic marketing tool for any radio station.

Built in 1954 by Abeking & Rasmussen in Lemwerder/Bremen (West Germany) for Det Stavangerske Dampskipsselskap (DSD) in Stavanger (Norway) as a cargo vessel. The tonnage of the vessel was 477 GRT, 190 NRT and 575 TDW and the vessel measured 186,8 / 29,3 / 8,7. The ship was one of six similar ships owned and operated by the company to carry cargo between Bergen, Stavanger and Oslo. Before renamed MV Communicator the ship was called Tananger, Charterer and Gardline Seeker.

NO Radio equpiment is included in the sale.

Offers over �25k

IF YOU NEED TO ASK ANY QUESTIONS, PLEASE EMAIL davemiller@radio.fm

I am not sure if you receive most of your calls or not. If you find yourself making a lot of outgoing ISDN LD calls this may be of interest to you www.isdnlongdistance.com

It is a resell of Sprint services. All calls are carried on the Sprint
network at 64k. 800 numbers and dial arounds can be used.

Thank you,

John Schuck
www.isdnlongdistance.com

This is outrageous? This is actually pretty reasonable. I would like to see the FCC start actually enforcing interference laws. Around here we have plenty of CBers with multi-kilowatt boxes that are splattering all over nearby non-CB bands, plenty of folks selling appliances that don't even come close to meeting Part 15 requirements, and the FCC has basically ignored it since the Reagan administration gutted them. I think $10K for the sort of outrageously illicit operation that is common on the CB bands is really too small.

The AM broadcast band is horribly degraded today by the amount of trash floating around on the AM band, mostly due to Part 15 violations. Cleaning this trash up is the first step toward revitalizing AM and making it usable for the average listener again.

I hear people comparing Rush Limbauigh and George W. Bush to the Nazis all the time and it sickens me, since this administration has been the most pro-minority Administration in over 100 years since Reconstruction.
An African American woman has been nominated for Secretary of State.
A Jewish American has been nominated or Secretray of Homeland Security.
A Hispanic American has been selected at Attorney General.
I suppose the description of Al Franken as the Democrat's Goebbels was less than gracious, but his lack of respect for opposing opinions is fascistic. If Al Franken was our President, opposition figures would face  IRS audits, wiretapping,  and would probably have other serious problems . the man hates.  I still  suspect Clinton,as a jealous husband, had something to do with the untimely demise of Vince Foster.
And you should read 'It Didn't Start With Watergate " By Victor Lasky.
But the  description of the terrorists as Islamofascists is sound based on their desire to install a clerical and totalitarian regime that would be intolerant of other faiths...
Your folks do not know how fortunate itb is  that John Kerry and Al Gore never came to power in the face of Al Qaeda.

Welllll, your public library is not a court, either.  But it _can_ make you
pay your fines.  How?  The same way that the FCC can do it--take you to
court and see how it all comes out.

No, the Bush administration has been the most pro-corrupt-incompetent-kissass administration since Grant's.

That several of the corrupt incompetent kissasses promoted to high positions just happen to be people of color is a calculated measure taken by the powers that be in the Bush administration to confuse inherently racist fools like yourself.

The rest of us prefer to judge people by the content of their character (as evidenced by their record of performance), not by the color of their skin.

Aren't you taking a rather provincial view of Bush and let's say African-Americans.  African-Americans in general don't seem to view Bush or Limbaugh as someone with whom they agree and quite frankly that's a good point of view.  Bush does have some African-American support but sadly most of it seems more interested in what money and power it can gather ala Armstrong Williams or even the Reverend Lusk, or sadly homophobia as a motivation.

Since you've already made up your mind that nothing Bush can do is trending towards fascism, I won't ask just what else government able to grab an individual and hold that individual without court proceedings for three years is an indication of?

> An African American woman has been nominated for Secretary of State.
> A Jewish American has been nominated or Secretray of Homeland
> Security. A Hispanic American has been selected at Attorney General.

What of these nominations, should the nomination of single individuals really prove anything?  How many African-Americans agree with Condoleeza Rice?  Aren't there issues with the Atty General nominee that should worry most thinking folk like claiming that the Geneva Conventions don't apply at the whim of the President (hint, the Geneva protocols also cover folks who are not in uniform)

Of course. Guys, the FCC *can't* throw you in jail for a criminal violation if
you break their rules. They *can* fine you and file a civil lawsuit against you
if you don't pay.

Hi Mike,

I must put you back in the kill filter, you seem to have slipped through the net.  Do you have to cross post everything you read into a load of newsgroups?
I am amazed that in all the time I have been using the Internet, I have never seen you give ANY opinion of your own, you're always copying other peoples work or copying parts of articles.
That station will NOT get a licence, it is a dream for a few people that seem to want to travel back in time.
I hope they give the licence to someone that will use it for a decent station.  I'm so bored of every station playing the same music in a different order that I tune to CENTURY 105.4 now.

Radio Nacional de Espa�a (RNE) today begins regular digital radio transmissions on mediumwave, with which it becomes a pioneer of the DRM system. RNE explained that from now on digital and analogue transmissions will share the same frequency, "until we migrate definitively to digital technology, giving the capacity for a greater number of quality programmes on mediumwave, similar to FM, with additional multimedia services and the possibility of automatic tuning." According to RNE the innovative character of digital technology on mediumwave has made it necessary to conduct a series of tests and the putting into operation of an experimental DRM system on mediumwave permitting the possibilities of the system to be explored. For that reason, a year ago a collaboration agreement was signed a year ago between RNE, the University of the Basque Country and the company VIMESA, for the accomplishment of these tests.

The DRM transmissions are coming from the Arganda transmitting centre, with 10 kW power on 1359 kHz. This morning a special half-day conference was held at the RTVE headquarters in Madrid to mark the launch.

You're more charitable than me. I always figured you had to be high on something to find anything funny in his stuff.

>1.: "George Bush is not intellectually competent to run the country. He
>is closely supervised by emissaaries from corporate America who are the
>real masters of the country."

The "stupid" label is one that the Dems have tried to stick on their opponents since at least the time of Gerald Ford. It's just a manifestation of their elitism.

I like the "real masters" tag. Give the people a good conspiracy theory. Keeps them from thinking.

>2. "The Iraq war was launched by "retarded neo-cons" (sic)  planning to
>enlarge the war into Syria and Iran."

Would anyone dealing with a true and accurate description of events need to use a label like that?

>3." Americans who do not agree with the Franken agenda are stupid.

See #1. Just arrogant elitism. We shouldn't be pointing this out, however; if it goes on, it will play a major role in Franken's downfall.

>4 "People who do not agree with Franken and Stephanie Miller are
>morally inferior to those that do. Republicans are wealthy, heartless,
>complacent folks who would just as soon see the rest of the world
>starve than give a penny to charity."

People who pay attention to reality know which side of the political spectrum most charitable contributions come from. Again, another contribution to Franken's downfall: obvious misrepresentation of facts.

>5." The Bush Administration is not lawfully in power."

Another example of misrepresentation of facts, extending into the realm of fantasy.

Hate radio is everywhere, from little college stations to well-financed national networks. Just change the station.

>David Grossack is a writer and lawyer in Hull, Massachusetts. See his
>website at usaexposure.com

Is that where this article came from? That is one of the worst-designed web sites I've seen since the last time I looked through radio station web sites.

This moderated group is one of the few I consider important in being able to communicate (our biz) from time to time.
Rumor is AOL had been getting too many requests for tracing the "unwashed" idiots who (under our Bill of Rights) keep posting their rants and raves including threats (I guess). Something to do with the new search and destroy acts of our Government.  More freedom for  Iraq...less for  America?
Anyway...anyone have any hints how I can continue my own rants and raves about the broadcasting biz?
Better hurry.

Wednesday, January 26, 2005

According to the New York Post, quoting several sources, Sirius Satellite Radio and XM Satellite Radio are holding preliminary talks on a possible merger. Although this would create a monopoly in the satellite radio industry, the two companies are understood to be hoping a deal would be allowed if the Federal Communications Commission considers satellite radio as part of a broader industry delivering music and other content through mobile devices, such as cellphones.

An article in the Cincinnati Enquirer says that the former VOA Voice of America Bethany Relay Station is in urgent need of repair, and to help save the building Ohio lawmakers are considering a $275,000 grant. That money would be combined with locally generated dollars to match a requested $625,000 "Save America's Treasures" federal grant. The total $1.2 million would be spent on electrical, heating and structural work on the building, which houses the Gray History of Wireless Museum, the Media Heritage broadcasting collection and township park offices.

Hopefully this marks the resumption of MediaScan. I had to stop for several reasons. First of all, I was away on vacation for 6 weeks, and it was hard to get going again. Then, I got put in charge of Radio Sweden's transition to a new web content management system, and was told to put MediaScan aside.

Later, when it turned out that I did have some spare time in the new assignment, the English Service expressed interested in continuing MediaScan. But after a computer crash, I couldn't get my Radio Userland blog software to work right. I've now switched to another system, Blogdrive. It lacks many of the features of Radio Userland, but does allow me to post from anywhere. I could only get Userland to work on a computer and home, and not behind the firewall at Sveriges Radio.

I'm note sure how often I will publish, or whether I will publish a lengthy bulletin or blogs. The latter is easier, but others (especially Andy at Radio Netherlands) do that well. I am gratififed that a few people have asked if MediaScan is still alive. That indicates some interest, so I will try to get something here on a regular basis. Besides, it's a great URL and deserves content!

Around 40 frequency managers of 18 shortwave broadcasters have converged in Kuala Lumpur since Monday for an Asia-Pacific Broadcasting Union (ABU) conference on reducing interference to shortwave services. The first two days of the 2005 Coordination Conference of the ABU Shortwave Coordination Group, ABU-HFC, saw significant success achieved towards this end. The conference hopes to address frequency channel requirements for more than 6,700 daily shortwave broadcasts by using coordination methods and complex software tools.

The recent tsunami calamity has underscored the critical importance of shortwave radio in bringing disaster warnings and new of relief efforts to the affected population, and the need to keep it free from interference. The ABU-HFC Steering Committee also met on Monday and made some crucial decisions on the functions of the group.

Poor choice of words for your subject line. The name "Weird Al" belongs to a completely different (and much funnier, and much more respectable) entertainer.

(Yankovic, just in case I need to be perfectly clear.)

Whether they succeed in gaining the license you have to admit that the
recent 'Pirate Radio BBC' local broadcast on three MW channels in the
area had rather more than a 'few listeners' tuning in to the programme
content of the 60's.

Actually, they *can*.  http://www.telecomattorneys.com/analysis.html
which cites provisions of the Communications Act which allow prison
terms of up to two years for violations.

OK, it won't be the FCC that throws you in jail.  They'd gather evidence
of violation of the Communications Act, tell the federal marshals where
to find you, and help the federal prosecutor prosecute charges for
violation of the Act.

None of which is at all common.  The vast majority of violators "get the
message" from the civil forfeitures.  I do have a *vague* recollection
of a custodial sentence being imposed on someone who insisted on
continuing to jam amateur radio communications after having several
civil forfeitures imposed.  Can't recall anyone ever being jailed for
pirate broadcasting.  Don't take my memory for it that it hasn't
happened though.

I saw this story in the local paper. It looks like they jazzed up a bit to raise a bit of interest but I think the paper's involved with the potential backers. I'd be surprised if it develops beyond a pipe dream. There's money in nostalgia but we've had a 20 year gold model running now and the people who stand to make the money know how tolerant it is. Too strong a 60's flavour all day won't fly. As for being on a boat, the novelty will wear off and after that it will be irrelevant - down to the audience. Someone saw the Communicator was up for sale again, didn't they...

First, i am no racist. That's absurd, defamatory and ignorant.
Second, I am not a Republican automoton. I disagree with much of the
Patriot Act, the GOP position on stem cell research and I am strongly
in favor of gay marriage.
I am not a scholar of the Geneval Convention,.but I understand the"
ticking bomb "theory of torture and I think some light persuasion or
psych pressure on people who know about a vast terrorist network just
might save the lievs of innocent people.
As for the appointment of minorities to the Cabinet, the mere fact that
other minority group embers do not agree with them is irrelevant to the
fact that the GOP, whatever its flaws, is breakling new ground by
including representatives of these groups. that is to Bush's credit.
Finally, Mr. Huseein is being tried as a  human rights criminal. His
emoval from office was morally justified even if our government had
some erroneous intelligence about WMD's. I can'rt see blaming Bush Rice
etc. for the mistakes of the
British intelliegcne that supplied the data.

Just to clarify, they're talking about the building itself.
Most of the rest of the site has been turned into a
park.

Get a regular ISP. I don't know where you are, but most ISPs offer some form of Usenet service, and most of them are a whole lot faster than AOL's weird interface. AOL started out as an internal messaging system and they gatewayed themselves to Usenet in a rather crude way in the early nineties before they actually offered any actual tcp/ip services. They are still paying today for some of the cruft left over from the way this was done, in overall performance and support difficulties.

In any event, your alternatives are google (which is even slower and more cumbersome), an ISP that offers their own news service (almost certainly the cheapest solution), and possibly using an independant NNTP service like Supernews from your account on AOL. The last I heard, AOL was blocking all NNTP traffic to prevent their customers from using outside servers, but this may no longer be the case with AOL's usenet interface being shut down.

```

I've been amazed by the sound quality of their aacPlus stream:
http://minnesota.publicradio.org/radio/services/thecurrent/

Does anyone know how Ogg might compare?  I understand that is is better than MP3.

I am involved in a voice-related streaming project:
http://dowire.org/wiki/index.php/Democaster

"Just a few second is all it takes.The radio jingle imprints the name of the presenter or station on the listener's ear, and they're hooked.

That's the theory, and ever since jingles crossed the Atlantic to pirate radio and then to the new BBC Radio 1 in the 60s, they have been a vital part of the radio experience, whether it's 'Wonderful Radio One', ' To-ny Black-burn' or 'Paul Gamba-ccini'. Close harmonies, a musical phrase that sums up the identity of the station, urge the listener to stay tuned.

DJs, producers, composers, collectors and listeners talk about the jingle in their lives."

I was just listening last night...sounds kinda like the old WCKY
format as far as music goes. Too bad we are losing another great
station.

Used to listen to WCKY on the RIGHT side of the dial every night as a
kid. CBS mystery theater was the best!

swissinfo  January 2, 2005

Interview with Beat Witschi who became director of swissinfo on January 1, swissinfo's new director, Beat Witschi, says the internet has the potential to revolutionise the media and how we access information.

For swissinfo itself, his priorities are to provide more information and services to the Swiss living abroad, and to better integrate swissinfo's website into the Swiss Broadcasting Corporation's multimedia operations.

swissinfo: You became director of swissinfo on January 1. How do you see your role?

Beat Witschi: I helped to create the web platform, swissinfo, which went online in 1999. Before that we were a shortwave [radio] service.

Now the Swiss Broadcasting Corporation (SBC) - of which we are a part - is in the process of defining a multimedia strategy for the entire corporation.

swissinfo must play an important role in that strategy. We have an additional mandate to provide a service to the Swiss living abroad. And so I want to be sure that the SBC is aware of our role, and that we can assist the corporation in developing this strategy.

swissinfo: How prepared are you for your new role?

B.W.: I was fortunate enough to work in multimedia when I worked abroad, and I am bringing this knowledge to bear in my role at swissinfo/Swiss Radio International.

I also know swissinfo/Swiss Radio International very well because I worked here for many years as a radio journalist.

The political authorities and the SBC will ultimately decide whether and in what form we should continue.

swissinfo: What do you intend to change as director of swissinfo?

B.W.: We will certainly try to do more to integrate swissinfo into the SBC. To that end, we need to develop both the quality and the content of our nine-language web platform. We need to expand our platform, and to make it more attractive and better overall.

We also have to offer more to the Swiss abroad in terms of services, and for this the internet is an excellent medium.

swissinfo: Do you have any concrete objectives for this year and beyond?

B.W.: The focus over the next 12 months is to improve the website. Two years ago we upgraded all nine language sites, but there is still work to be done to make swissinfo more interactive, faster and to expand our content.

The medium term will depend on the SBC, which has to decide to what extent we should be integrated into the corporation.

swissinfo: You mentioned multimedia strategy. Do you think swissinfo will still exist in its current form three years from now?

B.W.: The website will certainly still exist. I don't know whether we will have nine languages, but I hope so. This is largely a decision for the political authorities.

In my opinion, swissinfo is very well positioned. We are cost- efficient and flexible, we have a good journalistic product, and we use a medium that is accessible across the world. In general, I am very optimistic that we will still be here in a few years' time.

We have to look at Switzerland through the eyes of someone living abroad.

swissinfo: Competition from within the SBC and from private operators is growing. How is swissinfo positioned against competitors?

B.W.: We are answerable both to the political authorities, who want a service for the Swiss abroad, and to the SBC, which provides funding for us. Both will ultimately decide whether and in what form we should continue to operate.

Ideally swissinfo would complement the SBC's existing multimedia offering. This is what discussions are focused on at the moment.

We want to offer as much content as possible, but we can't do it all ourselves because we don't have the resources. So we are focused on finding creative ways to work together [with the SBC].

swissinfo: What makes swissinfo different from other online media in Switzerland?

B.W.: We provide perspective from abroad, while the domestic Swiss media serve primarily a local audience, which means their focus tends to be regional [ie: on German-, French- or Italian-speaking Switzerland].

We have to offer more - namely a national overview. And our journalists have to look at Switzerland through the eyes of someone living abroad.

They have to decide which are the most important issues, trends and developments behind the daily headlines. This is our niche, our strength and also our mandate.

swissinfo: Last October, swissinfo/SRI ceased all radio broadcasts. Where does that leave the Swiss living abroad who do not have internet access?

B.W.: Naturally it would be ideal if we could communicate through a range of media - radio, television, internet and mobile phones. But for financial reasons, we had to decide which medium worked best for us, and that was the internet.

The advantage is that we can offer much more content than previously. The drawback is that not everyone has internet access. I think we made the right decision under the circumstances. With this medium we can offer the best service to both Swiss living abroad and also to an international audience.

swissinfo: What are the prospects for the internet as a medium?

B.W.: It's likely that the various media will continue to develop. The younger generation already expect to be able to access the information they want through the media they prefer - basically information "on demand". The internet has enormous potential here, and far more than has been realised yet.

Radio Havana has English programming. You could find out more by looking for their website or going to alt. radio.shortwave.

The programming is vintage anti-Americanism.

Apparently Wal-Mart are to start selling DRM radios!

Nothing on their website - anyone got any more info on this?

Don't forget Canada! Here in New Hampshire, I get oldies at night on a few
clear-channel AM stations, mainly from Canada. You might be able to get
740 (CKWO) where you are.

Oh, and I'm sure the Blogosphere would be suprised to hear this. They have already been raking the MSM (mainstream media) over the coals for a number of things. The latest is the poor coverage of the aid being sent to the area hit by the tsunami by everyone except the UN.

(If you have not checked Blogs; at one end, they are vanity sites, at the other end, they are chat rooms with limited html support.)

The tsunami:
http://diplomadic.blogspot.com/

Gadget blogs:
(I have not looked at these very closely, so feel free to flame away.)

http://www.engadget.com/
http://www.gizmodo.com/
http://www.scriptingnews.com/

(there has to be more of them out there)

Port Blair, India (AFP) - Glued to battery-operated radios, survivors in the
remote Andaman and Nicobar islands are getting updates on missing relatives
and aid with the help of the state-run All India Radio (AIR).

Its transmission centre in the Andaman capital of Port Blair has been
relaying messages 16 hours daily to islands where telephone lines have been
washed away.

"The archipelago's total population of 350,000 are our listeners and since
the tsunamis struck there is not one radio set which is not tuned into our
medium or short-range message transmissions," said programme executive Ashok
Srivastava.

Hotels, shops and taxi drivers are turning their dials to AIR, whose executives have become regular announcers broadcasting messages received from around the islands and from the Indian mainland in several languages.

On the ravaged island chain, 812 deaths have been officially documented, according to the government.

However residents, police and aid workers fear 10,000 people died across the 500-plus islands which stretch over 800 kilometres (500 miles). Bodies are still being pulled from the debris.

The Port Blair radio station, near the mouth of one of the world's busiest shipping lanes, the Straits of Malacca, is also reaching boats in the region.

"Two days ago a US ship after listening to our broadcasts in English rescued six Indian fishermen who were lost in international waters," Srivastava said.

"Our profile has now been converted into that of a support provider to rescue and relief missions across the Andamans," he said.

Two female AIR workers, Lalita Tigga and Jaysheela Lakra, and five engineers cancelled their year-end vacations when the tsunamis struck and volunteered to carry phoned-in messages on special broadcasts.

"We are not official announcers but we are taking in appeals or broadcasting live messages that come on the telephone or are handed over to us personally by survivors, police or the army," Tigga said.

"We broadcast live with one hand on the red button to cut off anyone who tries to spread rumours while on air," said Lakra, before donning headphones for a full day's work.

"So great is the fear of the tidal waves here that one day when we announced the arrival of drinking water, people left their homes and ran to higher ground thinking tsunamis were coming. We have to be very careful," she said.

"The programme has become so important that from today we are relaying tsunami-related news from New Delhi to local listeners."

The messages come from some of the 12,000 survivors living in makeshift camps or from their frantic relatives in mainland India.

"Maybe in a day we are broadcasting up to 700 messages. Maybe 1,000 or perhaps 2,000. We have just lost count," said station technical manager P.S. Sehgal.

A bedraggled man Sunday came to the station trembling with emotion.

"You are our God. Beceause of you I now know my wife, son and daughter are alive and well in Car Nicobar," said the man, who identified himself as

Jeevan.

He was separated from his family when tsunamis devastated his home. He was brought to Port Blair by military rescuers last week.

His family members handed over a slip of paper to the Car Nicobar police who gave it to the radio volunteers.

"There are thousands of such emotional reunions and that is our reward," said Tigga.

I don't believe that's correct. Most of that stuff is used in production broadcast environments. And the Cisco Internet routers are just that, routers - they have nothing to do with radio at all.

On Thursday 6 January Radio 10 Gold, Noordzee FM, Radio Veronica, Yorin FM, RTL FM, Radio 538 and Radio 3FM all will transmit the same program under the name Radio 355 in aid of the Tsunami relief fund.  This is a unique event in Dutch radio history.

I would be grateful for a translation of the following please:

Radiostations slaan handen ineen als Radio 555

Hilversum - Zes radiostations verenigen zich op donderdag 6 januari in Radio 555. Het gaat om Radio 3FM, Noordzee FM, Radio 10 Gold, Yorin FM, RTL FM en Radio 538. Op deze manier willen de zenders gezamenlijk zoveel mogelijk geld inzamelen voor de slachtoffers van de zeebeving in Azi�, zo deelden ze donderdag mee. Het geld gaat naar het landelijk gironummer 555 van de samenwerkende hulporganisaties.

De actie van Radio 555 is op dezelfde dag als de landelijke tv-actie van zowel de publieke- als commerci�le tv-zenders die 's avonds begint.

De radiouitzendingen worden verzorgd vanuit de speciaal voor dit doel ingerichte Studio 22 in Hilversum. Daar geven de ochtend-dj's van de verschillende zenders de aftrap voor de inzamelingsactie. De radiostations gaan de hele dag door, tot aan het moment waarop Nederland 2, RTL4 en SBS 6 's avonds om half zeven hun gezamenlijke tv-uitzending beginnen.

Volgens de initiatiefnemers is het de eerste keer dat een publieke radiozender samen met commerci�le collega's de handen ineen slaat voor een goed doel. De commerci�le radiostations waren woensdag al begonnen met een sms-actie. Wie het woord 'geef' sms'st naar 2020 doneert daarmee 1,50 euro aan giro 555.

Radio Habana Cuba broadcasts in English to the US on the shortwave bands.
I don't know frequencies offhand but the WRTH will list them.

The programming, for the most part, is bland propaganda. They used to have
some great music on, including live remotes from the Hotel Nacional with
all of the latest hits, but I don't think they have done that in years.

You might want to consider the CC Radio Plus from the C Crane Company. It is
avaliable on the Internet. Just do a Google search.

On Thursday 6 January Radio 10 Gold, Noordzee FM, Radio Veronica, Yorin FM, RTL FM, Radio 538 and Radio 3FM all will transmit the same program under the name Radio 355 in aid of the Tsunami relief fund.  This is a unique event in Dutch radio history.

I would be grateful for a translation of the following please:

Radiostations slaan handen ineen als Radio 555

Hilversum - Zes radiostations verenigen zich op donderdag 6 januari in Radio 555. Het gaat om Radio 3FM, Noordzee FM, Radio 10 Gold, Yorin FM, RTL FM en Radio 538. Op deze manier willen de zenders gezamenlijk zoveel mogelijk geld inzamelen voor de slachtoffers van de zeebeving in Azi�, zo deelden ze donderdag mee. Het geld gaat naar het landelijk gironummer 555 van de samenwerkende hulporganisaties.

De actie van Radio 555 is op dezelfde dag als de landelijke tv-actie van zowel de publieke- als commerci�le tv-zenders die 's avonds begint.

De radiouitzendingen worden verzorgd vanuit de speciaal voor dit doel ingerichte Studio 22 in Hilversum. Daar geven de ochtend-dj's van de verschillende zenders de aftrap voor de inzamelingsactie. De radiostations gaan de hele dag door, tot aan het moment waarop Nederland 2, RTL4 en SBS 6 's avonds om half zeven hun gezamenlijke tv-uitzending beginnen.

Volgens de initiatiefnemers is het de eerste keer dat een publieke radiozender samen met commerci�le collega's de handen ineen slaat voor een goed doel. De commerci�le radiostations waren woensdag al begonnen met een sms-actie. Wie het woord 'geef' sms'st naar 2020 doneert daarmee 1,50 euro aan giro 555.

In a "Guardian" piece today, Maggie Brown supports Ofcom's efforts to increase the amount of local news on our radio stations. She points out that : "Eighty seven per cent of 272 local licensees broadcast adult mainstream, easy listening and gold services. Only 1% are speech and news - another way of putting it is that 80% of the population have no commercial local news and speech service."

http://www.rogerdarlington.co.uk/commswatch/index.php?id=P1161

Maggie Brown
Monday January 3, 2005
The Guardian

Imagine being stuck on a motorway when a blizzard strikes, bringing cars to a frozen standstill for hours. Stranded in the dark and cold for up to 12 hours, where would you turn for news? The local radio station?

Overnight on January 30, 2003, just such a misfortune befell thousands of motorists on the M11 in Cambridgeshire. The event became a cause c�l�bre in regulatory circles, because it exposed a serious gap in commercial radio's service to the public, just as the Communications Act was being finalised.

Several local commercial radio stations, one owned by GWR, were unable to report and react to the news, or offer any live traffic updates. None of them had a single journalist on duty. The honourable exception was one small station, Star, in Cambridge.

The fallout from that night is strewn across Ofcom's proposed policy for radio, Preparing for the Future, its first major document on regulating the sector, which is published just before Christmas. Ofcom has applied the same standard of rigorous research it earlier brought to bear on public-service television, causing the BBC to squirm.

Despite lobbying from commercial radio, the Communications Act contains a clause requiring a test of "localness" to be devised and applied by Ofcom across the sector. The test is also seen as part of a defence against foreign (that is to say American) takeovers.

The failure to deliver local news and traffic information, when sorely needed, has also spilled over into two other cost-related battlegrounds, which had seen the former Radio Authority and commercial camps at daggers drawn.

These are, firstly, the move towards computerised broadcasting - known as automation - where pre-recorded links and news are fed into music; and, second, news hubs - the pressure to service small, often loss-making local stations from a regional newsroom, outside the station's area.

So, while 2005 is shaping up as the year of commercial radio merg ers - with GWR and Capital probably only a start - it is also the point where Ofcom is trying to strike a new deal. Namely, what public good is supplied by commercial radio, in return for consolidation?

Preparing for the Future is partly a consultation on ways to define and enforce localness, underpinned by a "yellow card" system, triggered when programme formats that include a duty of localness are breached. Ofcom is buttressing its statutory role with research, finding 91% of listeners want local news, 78% traffic, 68% weather.

But since it wants to judge on the output - what is delivered to listeners rather than how companies organise that - it is pretty positive about allowing news hubs to go ahead. However, it is prepared to break its own light-touch regulatory policy by saying that as a minimum there should be a professionally trained journalist in every area, able to report and react to events.

For that, it is prepared to drop the restrictions on automation - and leave it to the good sense of the operators. For example, a news bulletin could be pre-recorded for the morning, or read from a news hub, to allow the journalist to go out and report.

This is a somewhat questionable notion: listeners have the right expect a local radio station to be sited in their area. Indeed, it is odd that some operators seem prepared to run the risk of losing their great strength, a genuine local presence, for a short-term gain, and this at a time when local advertising is growing twice as fast as the national rate.

The other big issue is choice and diversity, which is where Ofcom as a licensing body has great power. Not much is free in media land these days, but local commercial radio licences remain so, which is why, whenever an old-fashioned analogue radio licence is advertised, queues form round the block at Ofcom towers.
There is a telling statistic in Ofcom's review, illustrating commercial radio's drab tendency to become little more than pop music broadcasters, converging towards the easy middle-of-the-road option. Eighty seven per cent of 272 local licensees broadcast adult mainstream, easy listening and gold services. Only 1% are speech and news - another way of putting it is that 80% of the population have no commercial local news and speech service.

This is the context in which to judge the first two licence decisions from Ofcom last month, which awarded an Edinburgh licence to the Wireless Group for a local news-led station out of a field of 12, and a smaller Blackburn licence to a group promising "high-profile local news" from four applicants.

It is a clear signal and a good start. But it will take more than a determined regulator to counter so many years characterised by a paucity of ambition.

I don't agree with "very different" but let's assume that he doesn't like
their format. Still, I think he should scan the dial for what he likes.
I get oldies on that new station on 720 (CHTN), but he'll probably get
WGN. Conversely, he may get stations from the Western Provinces that
don't reach here.

Hi Gang!

I'll be Bob Edwards's guest this Thursday (January 6, 2005). If you have XM Satellite Radio, check it out. Details below:

The Bob Edwards Show on XM Public Radio
Weekdays @ 8AM ET on XM Channel 133
Encore Times: 9AM ET & 9PM ET

Thursday 1/6:
Bob talks with Joe Bevilacqua, author of a new biography of the great vocal actor Daws Butler, who was the voice of Yogi Bear, Huckleberry Hound, Quickdraw McGraw, and many other cartoon characters. Plus, an interview with Robert McCrumb, author of a new biography of British humorist P.G. Wodehouse, who gave birth to many memorable literary characters, including Jeeves and Wooster.

Joe Bevilacqua
Producer/Host
The Comedy-O-Rama Radio Hour

Yes I can hear KB in Buffalo at night here in Canton, but usually not too well. I don't check it that often because I'm usually on 1530 but every once in awhile it'll be so strong I'll hear it bleeding over to 1530 when WSAI fades on me. Unfortunately we have a low power Canton station on 1520 so there's no chance of hearing it during daylight hours.

Thanks for the heads-up on the format change. My recorder will be running every night until the end. A shame, we finally get a good oldies station in NE Ohio and we lose it (the ones actually located here are not too great).

Thanks for your reply.

Don

That pretty much settles it.  SBC isn't interested in
new listeners, but rather Swiss Nationals abroad.

> We have to look at Switzerland through the eyes of someone living
abroad.
>
> swissinfo: Competition from within the SBC and from private
operators is
> growing. How is swissinfo positioned against competitors?
>
> B.W.: We are answerable both to the political authorities, who want
a
> service for the Swiss abroad, and to the SBC, which provides funding
for us.
> Both will ultimately decide whether and in what form we should
continue to
> operate.
>
> Ideally swissinfo would complement the SBC's existing multimedia
offering.
> This is what discussions are focused on at the moment.
>
> We want to offer as much content as possible, but we can't do it all
> ourselves because we don't have the resources. So we are focused on

> finding creative ways to work together [with the SBC].
>
> swissinfo: What makes swissinfo different from other online media in Switzerland?
>
> B.W.: We provide perspective from abroad, while the domestic Swiss media serve primarily a local audience, which means their focus tends to be regional [ie: on German-, French- or Italian-speaking Switzerland].
>
> We have to offer more - namely a national overview. And our journalists have to look at Switzerland through the eyes of someone living abroad.
>
> They have to decide which are the most important issues, trends and developments behind the daily headlines. This is our niche, our strength and also our mandate.
>
> swissinfo: Last October, swissinfo/SRI ceased all radio broadcasts. Where does that leave the Swiss living abroad who do not have internet access?
>
> B.W.: Naturally it would be ideal if we could communicate through a range of media - radio, television, internet and mobile phones. But for financial reasons, we had to decide which medium worked best for us, and that was the internet.
>
> The advantage is that we can offer much more content than previously. The drawback is that not everyone has internet access. I think we made the right decision under the circumstances. With this medium we can offer the best service to both Swiss living abroad and also to an international audience.
>
> swissinfo: What are the prospects for the internet as a medium?
>
> B.W.: It's likely that the various media will continue to develop. The younger generation already expect to be able to access the information they want through the media they prefer - basically information "on demand". The internet has enormous potential here, and far more than has been realised

New? CHTN has been on the air for decades, and protects WGN.

> but he'll probably get
> WGN. Conversely, he may get stations from the Western Provinces that
> don't reach here.

CHTN, now that 1190 is off the air, is the DXers best shot at PEI. It has been heard well into the Midwest.

> Back to the old call! I remember WCKY when it played country music back in
> the '50s.

So can I, as a kid listening in North Carolina to Nelson King and Don Davis opening at 8 o'clock the WCKY 4-hour nightly jamboree.

Curiously, they preceeded it at 7 with an hour of Vienese "Waltz Time."  Not exactly a natural lead-in to 4 hours of country music.

Speaking of big signals and country (and preacher) programming, when I was an Air Force jet basic flight instructor at Laredo AFB in the late 1950's, my most trusted LF navigational aid for night flying the black West Texas skies was the 150 or 200 KW's (or whatever) of XERF...just across the Rio Grande from Del Rio. Even flying from Laredo, the LF ADF bearing was useful to keep you from wandering too deeply into Mexico or to far north up the river.

And my favorite night flying XERF program? "Sister Loretta Blankenship and the Prisoner's Bible Hour".

Pieces of Our Past
4 January 2005
Scott Thompson

Radio first came to Dublin in the early 1920s. WSB came on the air in 1922 as Georgia's first commercial radio station. In the early days of radio, stations more than 500 miles away were heard in Dublin. H.J. Braddy and his son established the first radio station in Dublin in the summer of 1921. The station, located in the Braddy home on North Franklin Street, was a rebroadcast station which could rebroadcast signals over a short range. The Grand Ole' Opry became a local favorite in the late '20s. The first Georgia Bulldog game heard in Dublin was the Yale game in October 1928. Throughout the '30s WSB, WMAZ, KDKA, WSM, WLS, and WLW were among the local favorites for drama, comedy and news programs.

In 1944, Dublin businessman George T. Morris sought out and obtained permission to establish a radio station in Dublin. Morris saw that Dublin was a growing community and he knew that the coming of the U.S. Navy Hospital would ignite a growth in Dublin that had not been seen in more than 30 years. Morris also saw that Dublin's trade area would be able to enjoy the music and programs, but more importantly, hear the commercials.

The station was built on the southwest corner of East Moore Street and North Franklin Street. Many of the early stations were owned by insurance companies and other corporations and their call letters were abbreviations for the company slogan. WSB in Atlanta is said to have been an abbreviation for Welcome South Brother! WMAZ radio, which began at Mercer University, was an abbreviation for Watch Mercer Attain Zenith. George T. Morris was joined by two partners in this venture. They were Lanier Thompson and Newton Thompson. Thus the call letters were M (Morris), L (Lanier), and T (Thompson), with the W designating that the station was east of the Mississippi River. By the end of 1944 the station was preparing to go onto the air. The signals of a test broadcast on Jan. 8, 1945, were heard by M.S. Lamont in New Zealand, more than 6,000 miles away. Depending on weather conditions, the station's signal could be heard in 19 states and Canada.

The station had an initial frequency of 1340 kilocycles with a power output of 250 watts and was one of 34 stations in the state. By today's standards, the power output would be obliterated by radio interference, but in 1945, the station's broadcast could be heard over a moderate range. Amazingly, there were five other stations in Georgia (WGAU - Athens, WGAC - Cedartown, WDAK - Columbus, WSAV - Savannah and WWGS - Tifton) which broadcasted on the same frequency as WMLT. Did you know there was another WMLT? Yes, a college television station at Concord College in Athens, W.V., uses the same call letters as our own local radio station. Today, WMLT broadcasts at 1330 kilocycles along with two other stations, WLBB in Carrollton and WBBQ in Augusta.

At one o'clock p.m. on Jan. 16, 1945, WMLT began broadcasting from a remote studio in the dining room of the Fred Roberts Hotel with a program dedicating the new station. The first program was the news from the station's network, the Mutual Broadcasting Network, which was established in 1934. Al Robinson was the first station manager. The first day's programming schedule featured Superman, Tom Mix, Roy Rogers, Count Basie, Lawrence Welk and Sammy Kaye, along with local entertainment. The Lanier High School Band traveled from Macon to play a midafternoon concert. From the station's two studios, Studio A and Studio B, local pianists Fred Kea, Nell Tyre and Mae Hightower played timeless classics and popular tunes of the day. The station signed on around sunup and signed off the air around 11 in the evening. Because a television in every home was at least a decade away, radio programs remained popular after World War II.

Among the more popular radio programs in the early days of WMLT were "The Jack Benny Show," "Fibber McGee and Molly" and Fred Waring and his Pennsylvanians. Throughout the day, local, state and national news programs kept the public informed. The station's first newscasters were Pat Evans, Jean Brigham and Betty Page. Donald Hull was the first sportscaster for WMLT. Betty Page hosted "Talk of the Town," a local news program.

"Most of the news items were phoned into the station," said Miss Page. "My mother often helped me gather the news for my show," Betty remembered.
One of the most difficult tasks that Betty and the other on air personalities had to endure was the announcement of the deaths of Laurens County's young men in World War II, which only began to accelerate in the Allied Army's final push into Germany in the winter of 1945. Misses Page and Brigham were two of the first women to broadcast the news on a Georgia radio station. Another young employee of WMLT in its early days was Louis Parker, who later followed in the footsteps of his father and went on to a long career in the dairy business in Dublin. Among the other favorite local programs were "Record Shop," which featured popular tunes of the day, and "Birthday Club," which announced birthdays of local citizens.

WMLT featured original programming with local artists performing gospel and country music. One of the more popular performers was Glenn Watkins and his "Dixie Playboy Band." Watkins, a native of Kite, Ga., began playing on the radio at the age of 17 in Greenville, S.C. While trying to establish himself in the country music business, Glenn opened for Eddy Arnold, Roy Acuff, Ernest Tubb, Pee Wee King and Minnie Pearl. The "Dixie Playboys" were formed just for WMLT and were popular favorites. Along with Watkins, Smitty Pope and Skeeter Harralson are all members of the Atlanta Country Music Hall of Fame. Glenn left the band in 1949 to join another band, The Trail Riders, before opening a successful insurance business in Albany, Ga.

Another WMLT employee to move on to other successful ventures in Albany was Grady Shadburn. Shadburn worked at WMLT in the early 1950s before joining the Army in 1954. In 1958, Grady joined the staff of WALB-TV. He worked at the station for nearly forty years and was known to a generation of baby boomers as "Captain Mercury." He also performed the role of "Ringo" in the western show "The Lazy A Ranch Party." Shadburn also served as the station's weatherman for decades.

On the station's 60th anniversary, we look back to some of the station's most well known personalities, both on and off the air. Ed Hilliard and Dick Killebrew were icons at the station in the third quarter of this century. Programs like "Party Line" and "Swap and Shop" drew many listeners. On "Party Line" listeners would try and guess the name of the song being played on the radio. "Swap and Shop" allowed listeners to buy and sell almost anything of value. In the 1970s and 1980s, Bucky Tarpley and Bo Whaley became two of the station's most popular morning personalities. Behind the scenes of any successful radio station are the women who keep the programs running and perform the daily business of the radio station. The best in the business were Jo Ann DiFazio and Anne M. Everly, who still works at the station after 40 years of service.

Today WMLT broadcasts gospel music programming at 5000 watts at 20 times its original power. There are no microphones, no turntables and no music you can dance to. But to everyone who ever tuned their radio to 1330 or 1340, cherish the memories of the songs that touched your heart, made you dance and reminded you of when you first fell in love. Happy Birthday WMLT!

Not so different as you might think. CHWO has to play a lot of music that's well outside the pop standards playlist, because very little recorded standards music exists that meets CanCon. Like every other Canadian station, CHWO must play at least 35% CanCon, and IIRC their PD said that they actually committed in their conditions of license to more than that. Yes, the formatics are very much AS in style, but the playlist is significantly broader than that.

Guess I should have been a little more specific. What I meant by "oldies" was 1950s/1960s R&R, R&B, and DooWop. I do like some of the old big band and especially jazz, and have heard some good stuff on 720 and 740 in Canada. Heard some EARLY Louis Armstrong (1923-1926) last night on 740 in Toronto, excellent!

(I received this today.)

Dear Mike,

Internet radio is passively measured, more people are listening than ever before, and there are lots of "niche" formats by which ads can be targeted to specific audiences.

Moreover, Internet radio is uncluttered, reaches the workplace, and makes a perfect "supplemental" media.

These are some of the reasons MediaPost's "Online Spin" columnist Tom Hespos (not to mention Ronning-Lipset's Eric Ronning) thinks Internet radio will find success this year.

You can check out the logic in today's issue of "RAIN: Radio And Internet Newsletter," online at http://www.kurthanson.com .

Also today:

-- Digitally Imported is now offering aacPlus-encoded streams...

-- A portable, Wi-Fi-enabled Internet radio tuner called Infusion will be demonstrated at the CES this month.

Today's RAIN is brought to you by Limelight Networks, a leading provider of audio and video streaming solutions for today's top webcasters.

Sincerely,

Paul Maloney
Editor

CBC and Pacifica are far from Unbiased News sources.
They are as left biased as CBN is to the Right.

Sinclair is doing nothing worse then the hatchet job CBS tried to do with
the False Documents or the continual biased news coverage of ABC and NBC.

Wednesday, January 05, 2005

The special one-day Dutch radio station Radio 555, which operates tomorrow to raise money for the Tsunami disaster fund, has its own Website at www.radio555.nl with programming information and details of how to donate money. A live audio stream will be available. For listeners in Europe, North Africa and the US, Radio 555 will also be broadcasting on shortwave on the 6 MHz band. For the exact schedule see the station's Website. The site, which is in Dutch, also mentions that the studio will be shown live on the Nederland 2 television network from 0500-1600 UTC, and a video stream will operate via the Website.

Today, radio stations in the Netherlands observed a 1 minute silence at 1100 UTC. On TV and in most public places, a 3 minute silence was observed. Most countries in the EU also observed silence for 3 minutes, with the exception of Denmark which already held its own silent period on Sunday.

(See more including a video at http://medianetwork.blogspot.com/ )

Media Network correspondent Victor Goonetilleke, 4S7VK, who is president of the Radio Society of Sri Lanka, believes that "uncomplicated shortwave" radio saved lives. "Ham radio played an important part and will continue to do so," he said in an e-mail. Until 28 December the Radio Society of Sri Lanka operated a shortwave radio link between Hambantota and the Prime Minister's disaster management office, and government offices in the stricken area. "We closed the link after the police got a communications link up in Hambantota," Victor said. "We went in because the District Secretary's office only had a satellite phone and communications were difficult." The Hambantota station was operated by Asantha Illesinghe (4S7AK), Dimuthu Wickremesinghe (4S7DZ) and Kusal Epa (4S7KE). However, there was one major problem: batteries were running out, and there were no generators to recharge them.

For those interested, there's a picture of this little radio at
<http://www.geekzone.co.nz/content.asp?contentid=3856>.

It's a great concept. An MP3 player for when you don't have wi-fi, and Internet radio for when you do, all in one box. A lot of my "radio" listening these days is done via MP3 file timeshifting, so this would be right up my alley.

Wed, Jan 05, 2005

By Nick Higgins

An around-the-clock transmission capacity would not have helped Radio Australia warn people of the tsunami, the broadcasters head said yesterday.

Mr Jean-Gabriel Manguy, who divides his time between homes in Melbourne and Bethanga, said there had been no warnings to broadcast.

"It took everybody by surprise ... although I understand that in some reports people in India were aware of the tremor and expected a tsunami," Mr Manguy said from Bethanga yesterday.

Mr Manguy is anxiously waiting for contact from his older brother, Jacques, who was in southern India when the tsunami struck.

Until severe budget cuts in 1997, Radio Australia had a 24-hour shortwave broadcast to Indonesia and other parts of Asia.

The shortwave service was partly restored in 2000 and there are now daily nine-hour shortwave broadcasts throughout Indonesia.

Mr Manguy said the shortwave broadcasts were supplemented by Radio Australia being available through 155 Asian FM stations,|which broadcast in English, Thai, Indonesian, Cantonese, Japanese, Vietnamese and French.

Thirty of those stations are in Indonesia and reach an estimated seven million listeners.

Mr Manguy said the disaster had shown 24-hour transmission would have been valuable in the aftermath and during rescue and relief operations.

"Natural disasters and political violence are difficult to predict or forewarn but as soon as they happen people need to know what is going on and local coverage is often censored," he said.

Just hours after the tsunami Radio Australia journalists spoke to the Indonesian Vice-President, Mr Jusuf Kalla.

Budget cuts in the late 1990s resulted in a halving of Radio Australias staff, which now number 76.

Radio Australias annual budget is $13.5 million but in 1997 it was twice that amount.

A transmitter near Shepparton broadcasts to eastern parts of Indonesia and Pacific Ocean countries while a transmitter at Darwin broadcasts to Indian Ocean regions.

Anyone here familiar with RadioShark, the Tivo for radio product? I'd
love to know about the pro, cons, etc.

Thank you,

Tom

History Television (Canada) is repeating "Radio Revolution", the
documentary about The Big 8 CKLW on Saturday at 7pm. Then at 9pm, the
movie Talk Radio is being shown. Talk Radio is repeated at midnight.

(Fred Waterer, ODXA)

Hilversum has never seen anything like it - public and commercial broadcasters were working together today in Studio 22, a big TV studio just along the road from Radio Netherlands, producing Radio 555, a one-day special radio station raising money for the tsunami disaster fund...(much more at http://medianetwork.blogspot.com/ )

# DJ BEN AIMS FOR THE RADIO WORLD RECORD

BY RAEANNE THOMAS

06 January 2005

Blind Dj Ben Kearns is overcoming all manner of obstacles to clinch a world record by staging a staggering 132-hour long radio session with the help of celebs including Yoko Ono.

The 19-year-old began the gruelling challenge at his former school, the Royal London Society for the Blind's Dorton House in Seal, yesterday (Wednesday) morning and will be auctioning off a whole host of memorabilia, including Beatles items donated by John Lennon's widow.

But at one point it looked as if the attempt would never happen as volunteers needed to help Ben were thin on the ground.

And this was a double blow for the student, who had intended to break a record back in June only to have it beaten before he had even begun.

The record for the longest continuous radio show by one DJ has recently been broken twice and currently stands at 121 hours.

In the summer, Ben was aiming to beat a 37-hour stint set by Simon Mayo but must now gear himself up for 132 to better a recent unconfirmed record of 131 hours.

He said: "It was always going to be a tough challenge, so the recent extension of the record just makes it all the more worthwhile.

It just means I'll be spending a little more time back at the RLSB!"

The teenager, who has been blind since the age of five, attended both Dorton House and the College to complete a National Diploma in Media.

During that time he was a regular presenter on the school station, with a Friday lunchtime show called Ready Steady Rewind, and is studying radio broadcasting at Thames Valley University in Ealing, West London.

During the record challenge, which is expected to end on Monday night, Ben will be allowed just a few breaks from the airwaves to grab a bite to eat and freshen up.

Luckily, businesses have donated him a special chair to sit in for the long haul and air conditioning units for the studio.

The show will feature live music and an interview with Sevenoaks celebrity Cheryl Baker, who once presented TV's Record Breakers.

Phone interviews will be on air with boxing legend Sir Henry Cooper, former EastEnder Anita Dobson, comedian Ross Noble and fellow record-breaking DJ Simon Mayo.

Former Bucks Fizzer Cheryl will then be on hand to help Ben celebrate at the end of the challenge.

RLSB workers will be out and about in Sevenoaks throughout the record attempt, encouraging residents to tune in.

Followers can listen on 1350AM locally and those further afield can tune in via the internet at www.rlsb.org.uk

However, more trained medical staff are still needed to sit in during parts of the challenge, and locals are asked to join the We're Backing Ben campaign by advertising on air, sponsoring him, or making a donation to the RLSB.

Anyone who would like to help should call Carline Vago-Hughes or Andy Rowell at the RLSB on 01732 592694 or send an e-mail to: radiomarathon@rlsb.org.uk

Hey!  Besides the 88 Rolling Stones songs and the
obnoxious Major Tom, (plus a few others) they now
have 14 new songs!  Hey, go a-z!  When Tommy B leaves, they'll
die - quick.

No quite what I meant. I should have phrased it better, I mean basically in
UK commercial radio bad is bad, small is less bad, with a few exceptions..

(Various articles on this)

--------------------------------------------

Date: 07-January-2005

Commercial Radio Australia is spearheading a mission to restore broadcast operations in tsunami-hit countries, contributing some 50,000 AM/FM radio sets to affected areas.

This initiative, which is being coordinated by the ABU, calls for the donation of radio sets and broadcasting equipment to survivors and broadcasters affected by the disaster, which has claimed almost 150,000 lives and left millions homeless.

Joan Warner, CRA's chief executive officer, said the first batch of 5,000 radio sets would be shipped to Indonesia in a week's time, with the rest to be despatched to affected areas over the next four to five weeks.

"We also have up to six transmitters that we can donate," she said.
Ms Warner also said CRA would send at least 12 engineers to rebuild broadcasting facilities in disaster zones. The engineers will be sent in groups of four for a few weeks at a time.

CRA is an industry body representing Australia's commercial radio broadcasters.

France's Eutelsat SA, an ABU affiliate member, will allow free usage of its fixed satellite services (FSS) in affected areas.
A representative, Jan Grondrup-Vivanco, said this would enable Internet access and Voice over Internet Protocol telephony be set up in these places.
Meanwhile, Singapore's MediaCorp has promised to look into the needs of Radio Television Maldives (RTVM) which lost much of its equipment when the tsunami struck.

## ABU appeal to aid disaster-hit broadcasters draws North American offers

Date: 07-January-2005
Offers of assistance to provide battery-operated radio sets and restore broadcast operations in countries hit by the December 26 earthquake and tsunami, in response to an appeal by the ABU, are coming from as far away as North America.

The owner of a network of radio stations in Canada's Yukon Territory is pledging broadcast equipment and expertise for affected broadcasters.
A representative of Burr and Burton Academy, a secondary school in Vermont, USA, has said its staff will begin collecting AM/FM radio sets for survivors of the disaster.

Meanwhile, a radio engineer from California, USA, said he is willing to travel to affected areas at his own expense in order to help build and maintain radio stations there.

## Relief operations continue in Sri Lanka

Date: 07-January-2005

Sri Lankan Sinhala and Tamil TV and radio channels, Sirasa TV/FM and Shakthi TV/FM, launched Sirasa-Shakthi Sahana Yaathra on 28 December, to enable the public to aid victims of the tsunami disaster.

Sirasa-Shakthi Sahana Yaathra sent a convoy packed with relief items to affected areas in the south, north and east of Sri Lanka. Volunteer doctors, nurses, school children and foreigners also joined the effort.

Another operation began in Colombo on 30 December to provide medical assistance to survivors in southern and eastern Sri Lanka.

Sirasa TV/FM said contributions and support were continuing to pour in to the main collection centre in Colombo and other regional offices around the island.

(07-January-2005)

---

## Radio Netherlands to set up radio stations in Aceh

Date: 06-January-2005

Radio Netherlands is starting a programme to set up a number of emergency radio stations in Banda Aceh, capital of Indonesia's tsunami-hit Aceh province.

The station will appeal to its 6,000 partner stations around the world to collect money and equipment for the programme.

Radio Netherlands Media Network reported that the emergency radio stations will in due course be built up into permanent stations.

One of the stations that was destroyed by the tsunami on 26 December is Radio Nikoya FM, that used to broadcast news in Indonesian from Radio Netherlands on a daily basis.

The head of the Indonesian department of Radio Netherlands, Indra Titus, said: "We want to help to get the radio stations back on the air, because radio is a very important means of communication in the stricken areas.

"As help is beginning to flow, communications must be restored to help the search for family members and make information accessible. Even under normal circumstances, radio in Indonesia is a vital means of communication that people cannot be without."

34 staff of TVRI and RRI-Indonesia missing

Date: 04-January-2005

Indonesia's public broadcasters, Televisi Republik Indonesia and Radio Republik Indonesia, say 34 members of their staff are missing in Aceh province, devastated by the tsunami on 26 December.

A senior official of RRI said 24 staff were missing, while TVRI reported 10 staff missing and feared dead.

Aceh province was the area worst hit in Asia's tsunami disaster, with more than 90,000 people killed.

About 100 TVRI families lost their homes or were badly affected, and both TVRI and RRI reported severe damage to transmitters and other equipment. About 2,000 people who lost their homes have taken refuge in a park in the TVRI complex in the provincial capital, Banda Aceh, where TVRI staff are helping care for them.

Meanwhile, India's public broadcaster, Doordarshan, has reported no casualties among its staff but severe damage to several TV transmitters on Car Nicobar, the northernmost of the Nicobar Islands in the Bay of Bengal. Twelve of the 15 villages on the island were reported to have been flattened.

---

SLRC-Sri Lanka mounts big relief operation

Date: 04-January-2005

Sri Lanka's public broadcaster, SLRC, has mounted a major relief operation for victims of the tsunami that struck the island on 26 December, killing more than 30,000 people.

After on-air appeals brought in big donations, SLRC sent more than 200 lorry loads of food, clothing and medicine to badly hit areas in the island's north, east and south in less than 72 hours. It also sent medical teams to many affected areas.

"A large number of volunteers from all walks of life worked round the clock with the staff of the SLRC to make this possible," its Director-General, Nishanta Ranatunga, said.

Among those who died was an SLRC member of staff who was among more than 1,000 people killed when the tsunami struck a train near the southern city of Galle.

An SLRC outside broadcast crew in the nearby town of Matara were luckier. Covering an unrelated story, they were trapped in their hotel when the tsunami struck but were later rescued and were able to cover the tragedy.

Over the SUmmer the President came through town.  Well, up until he left the locak station (WRFY in Reading, PA at 102.5) was barely coming in, when I was less than ten miles away fromt eh city.  Other Philadalphia stations like Q102 at 102.1 weren't coming in at all.  My Nextel phone was having issues as well.  Dropped calls - more than normal and the DirectConnect feature was just about useless.  Anyway, what the heck was going on?  Could the military, or secret service have been doing some sort of "sweep?"

I have 3 Pogo RadioYourway's (the original AM/FM) that I power with 3 NiMH D cells with voltage dropped with a diode, so they can record a week without swapping batteries.  (DC power plug snipped from optional AC adapters, a very odd size.  I want them as backup for when there's a power failure and the regular recording doesn't work.)

They're okay, but the AM portion is _very_ insensitive; it really has to be a really local station, I suppose to overcome internal processor noise.  You get more sensitivity back if you use it with a MW loop, which is what I do.

At 16kbs you get 4.5hr on the 32mb model, and 18hr with the 128mb model, only available at the Pogo site.   You can add a memory chip on either, though I haven't done that because I don't have a PC with a USB port and so can't format one.

I use them without a PC at all, so can't speak to how well their software works.

Recording with 2 AAA NiMH's that fit in the device is limited to about 4 hours; with a good NiMH, maybe the full 4.5 hrs, most of the time.

>>
Sorry about the mistake in the classification. However I easily receive ZNS3, Freeport, Bahamas, on 810 khz day and night from Florida. The announcer says that the station's power is 10 kw.
>>

ZNS3 isn't in the FCC database, but what else is new.

Even if it was 50 kW, it would be a Class B as the Bahamas has no Class A priority on 810.

ZNS1 operates 50 kW DA-1 mainly because after "Rio" any Class I-A had to operate with 50 kW (U.S. and Canada, et. al.) and "at least 50 kW" (Mexico) in order to retain Class I-A status.

Before, ZNS1 (a Class I-A) operated with 10 kW, and Canada's 1580 Class I-A also operated with 10 kW.

Class I-Bs and Class I-Ns can be grandfathered at 10 kW , but Class I-As can't be.

This, not withstanding XERF operating with 10 kW for decades now.

The U.S. isn't going to force the issue with Mexico and demand that XERF operate with its "notified" 250 kW, simply becuase there is not that much utility power available in the area, and, anyway, the 250 kW transmitter doesn't exist anymore.

But, the Bahamas' 1540 and Canada's 1580 were indeed forced to move to 50 kW,
which required both to install directional antennas to protect stations of
lower class in the U.S.

There was a while in the 80's when a Cuban operation on 820 was
walking all over WNYC-AM, too.

I would like to find the name and any other info on the man who delivered the news of the day on a New York City station each weekday morning in a sing-song manner, starting, "I see by the paper ...." This was in the mid to late 1940's.

If there is a better place to post this, please let me know.  Thanks,
Paul

WQAM is in English. There is no need to jam it.

>>
Sorry about the mistake in the classification. However I easily receive ZNS3, Freeport, Bahamas, on 810 khz day and night from Florida. The announcer says that the station's power is 10 kw.
>>

ZNS3 isn't in the FCC database, but what else is new.

Even if it was 50 kW, it would be a Class B as the Bahamas has no Class A priority on 810.

ZNS1 operates 50 kW DA-1 mainly because after "Rio" any Class I-A had to operate with 50 kW (U.S. and Canada, et. al.) and "at least 50 kW" (Mexico) in order to retain Class I-A status.

Before, ZNS1 (a Class I-A) operated with 10 kW, and Canada's 1580 Class I-A also operated with 10 kW.

Class I-Bs and Class I-Ns can be grandfathered at 10 kW , but Class I-As can't be.

This, not withstanding XERF operating with 10 kW for decades now.

The U.S. isn't going to force the issue with Mexico and demand that XERF operate with its "notified" 250 kW, simply becuase there is not that much utility power available in the area, and, anyway, the 250 kW transmitter doesn't exist anymore.

But, the Bahamas' 1540 and Canada's 1580 were indeed forced to move to 50 kW, which required both to install directional antennas to protect stations of lower class in the U.S.

I have 3 Pogo RadioYourway's (the original AM/FM) that I power with 3 NiMH D cells with voltage dropped with a diode, so they can record

a week without swapping batteries.  (DC power plug snipped from
optional AC adapters, a very odd size.  I want them as backup for
when there's a power failure and the regular recording doesn't work.)

They're okay, but the AM portion is _very_ insensitive; it really
has to be a really local station, I suppose to overcome internal
processor noise.  You get more sensitivity back if you use it with
a MW loop, which is what I do.

At 16kbs you get 4.5hr on the 32mb model, and 18hr with the 128mb
model, only available at the Pogo site.   You can add a memory
chip on either, though I haven't done that because I don't have a PC
with a USB port and so can't format one.

I use them without a PC at all, so can't speak to how well their
software works.

Recording with 2 AAA NiMH's that fit in the device is limited to
about 4 hours; with a good NiMH, maybe the full 4.5 hrs, most
of the time.

There was a while in the 80's when a Cuban operation on 820 was
walking all over WNYC-AM, too.

I would like to find the name and any other info on the man who delivered the news of the day on a New York City station each weekday morning in a sing-song manner, starting, "I see by the paper ...." This was in the mid to late 1940's.

If there is a better place to post this, please let me know.  Thanks,
Paul

Any others besides 1520 in Buffalo and 1530 in Cincinnati? I've been enjoying the heck out of WSAI 1530, especially last night when the DJ "Little Walter" was playing some fairly obscure stuff (at least by oldies radio standards of late). Just wondered if there were any other clear channel oldies stations that could be heard in Ohio after dark.
Thanks.

Those of us affected by the sudden appearance of Cuban interference might just conclude that it was just a coincidence that Radio Marti appeared - and shortly after, WOR started getting complaints of Spanish programming under our signal.

There is also a noticeable group of stations that do not follow the K/W
rule:
 KDKA, KQV, and KYW, all in Pennsylvania. These call latters may have been
asigned before the FCC adopted the K/W rule. There may also have been a
station in Michigan that was mistakenly assigned a K call a few years ago.
My latest records do not list this station.

Conductivity in Cuba is like much of Puerto Rico... horrible. The only net
in pre-castro years that covered all of Cuba was Circuito CMQ, with about a
dozen staitons, ranging from 50 kw to 10 kw. Today, the major networks have
5 or 6 staitons, but use 10 to 120 kw to fully cover the Island. There are a
half dozen national nets, many regional nets and a lot of local stations.

Nope. It was a set of 50 kw stations in each "third" of Cuba, running
regular programming. Now, there is a single 50 and two or three 10 kw
stations.

Sorry about the recent RRB double posts to Usenet (they didn't make it
through to the mailing list). My screwup.

Thanks. Happy GNU Year.

Hi,

You were probably listening to a national program called "Little Walters Time Machine". It's GREAT! Very unique.

It can also be heard online on WQMA OldiesRadio 1520 Friday's at 10am eastern. Goto www.q1520radio.com

There are a LOT of other really good national oldies shows that air there weekends too. Dick Clark, SuperGold, etc.

Can you hear KB/1520 in Ohio? It's on the wrong side of their pattern.
BTW - The word is that WSAI will be dropping their oldies for talk. :(

David....wouldn't Cubans looking to get propaganda-free radio from the U-S (not
that
this ideal is as easy to attain, anymore) be willing to learn English so as to
listen
to it?  I think you're a bit too dismissive of the suggestion.

The mis assigned call is KTGG, 1540, Spring Arbor, MI.  They have an
application to move to 1020, Grandville, MI (a suburb of Grand Rapids)
with 10 kw.

A US-funded Christian radio station is expanding its broadcasting network in Romania. Radio Micul Samaritean (Little Samaritan) has begun to transmit on 1485 and 1584 kHz mediumwave, in addition to FM and satellite distribution. Bernd Trutenau in Lithuania first reported about the station on December 30.

December 22 2004

A new web site (www.radioheritage.net ) has been launched to celebrate the story of radio broadcasting in the Pacific region, and to provide a home for a wide variety of radio heritage activities, exhibitions, archiving, research and advocacy projects covering New Zealand, Australia, the Pacific Islands and reaching as far as countries around the Pacific Rim.

'Radio has a long history in the Pacific' says Radio Heritage Foundation chairman David Ricquish.

'In fact, it's even claimed by some biographers that "Rutherford began what Marconi completed" in which case, New Zealand is the real home of radio broadcasting in the modern age'

Whether New Zealand's Lord Rutherford was indeed the true father of radio instead of Marconi is one of the hundreds of fascinating topics the Radio Heritage Foundation plans to investigate in the near future.

Currently, www.radioheritage.net contains information about various projects which the Foundation has underway, highlights radio heritage issues, and a selection of articles from its on-line archives project.

'We have hundreds of articles and thousands of images already available from our collections' says David Ricquish, and we'll be bringing these on-line as fast as resources allow. Our definition of "heritage" is anything up to a nano-second ago, so contemporary radio issues are as important to us as those of the 1920's or any other era' he adds.

'Radio has touched every aspect of our lives for almost a century now' says David Ricquish. "It has a social history, cultural, artistic, technological, heritage, genealogy and entertainment context' he says, 'and this web site, and indeed, the whole project, helps us understand just what the impact of radio on our lives continues to be in the new digital era.'

The Radio Heritage Foundation is a non-profit charity based in Wellington, New Zealand. Board members include prominent broadcasters from New Zealand, Australia and Europe and a growing number of contributors and volunteers located across the Pacific from the USA, Canada and Japan, to Australia and New Zealand.

There is plenty of power. There is just no need.

Since the very early 60's, it has been necessary to have a permit to learn English, and such permits are only delivered to those that have a government-mandated need to learn.

Russian was the second language in Cuban schools since that time, and only recently, in the last decade, has been abandoned.

Listening to US radio or TV is punishable by being declared an anticocial element, which reduces one's rations, makes many types of unemployment unattainable, and even affects where and whether one gets housing.

While many will make the effort to hear Radio Marti, as proven by surveys of emigrants who have left Cuba, it is really unlikely that many know enough English to understand the very colloquial English of WQAM, would risk doing so if they could, or would find anything at all of any interest to them even if they did listen.

Cuba is a totalitarian dictatorship.

Any idea what stations/formats occupied these frequencies before that? Or were they vacant?

January 1, 2005

The Columbia University lab where Edwin Howard Armstrong developed FM radio technology in the 1930s has been given National Historic Landmark status. Armstrong's technology, which gave radio a clearer signal than the AM band, had its public debut in 1939, though FM wouldn't become widely popular for another three decades.

An electronics whiz, Armstrong conducted much of his radio research for military purposes - specifically, to enhance U.S. military communications in World Wars I and II.

He had a frustrating time, however, with FM. He fought much of his life to keep the rights to his invention and finally committed suicide in 1951 when it seemed he had lost them. His wife kept battling and eventually prevailed in court.

Hello friends,

I am looking for reception of my Short wave transmitters located at Super Power Transmitting station, All India Radio, Bangalore, India. I am attaching program schedule of my station for details.  Please listen to them and provide me with feedback report.  All  reception reports will be duly acknoweladged and it will be forwarded to All India Radio's spectrum Manager for issue of QSL card. Your reception report may contain the frequency and service monitored, program details, time, date, type of receiver, antenna type, SINPO details etc.

Expecting the reports,

Wish you, your family and friends happy and prosperous new year 2004.

(R.Narasimha Swamy narasimhaswamy@yahoo.com)

You've got roughly 18 days to enjoy WSAI's current format - they're
slated to flip to talk as WCKY on January 17th or thereabouts.

It's official.  It's been publicly announced and the switch takes
place in mid-January.

There is plenty of power. There is just no need.
>>

However, the U.S. DID force the issue on one Mexican Class A, in which an unreasonably and impossibly high efficiency was notified.

In order to achieve the (formerly) notified efficiency, that station would require a 1,100 foot tall radiator. ELEVEN-HUNDRED feet! The actual radiator height is about 800 feet.

The newly notified facility purportedly has an 850 foot radiator, but its efficiency is still too high to be believed, unless the ground system is intentionally overbuilt.

For sale:

(The "Radio Crazy" is baaaaaakk!) Or should I be called the "TV Crazy" now? Hi!

Partial interest in new LPTV station to serve fantastic Rehoboth Beach, Delaware. For the "unwashed" Rehoboth Beach is to Delaware what Branson is to Missouri; what Atlantic City is to NJ; what Myrtle Beach is to SC. You get the drift! Rehoboth Beach has a Winter (census)population of 1,495(2000) yet gets over 2.7 million visotors per year!

The LPTV construction has already been granted by the FCC and expires May of 2007. Channel 59, 20 KW ERP.

The CP is going for $7,000 and we'd need about $100,000 to build the station.

This is a joint venture. There is an element of risk and you could lose all or part of your investment. All investors would be on the board with full voting rights if desired. No individual can hold over 49 percent. This means me too!

Active or inactive investors with at least $10,000
each are welcome.

Tel: (478)741-1710 in Macon, GA

Happy New Year to all on the list.

73,

Meyer Gottesman

810 is very listenable - if not quite a local - in the Miami/Ft.
Lauderdale market.

Hardly a sad loss, the two groups are hardly innovative broadcasters they
should be very happy together producing the same stuff they produce now.

(From Paul Donovan in uk-radio-listeners@yahoogroups.com)

Lots of big things coming up this year. I tried to flag up some of them in the Sunday Times today:

If years were hat-stands, this new one has more pegs than ever. Anniversaries abound and programmes will be hung on all of them. The year 2005 is the 10th anniversary of Classic FM's Hall of Fame, the 15th of Leonard Bernstein's death, the 20th of Live Aid, the 30th of Bohemian Rhapsody and the fall of Saigon, the 40th of Churchill's death, the 50th of Charlie Parker's death and the 60th of Radio 2 itself. Julie Andrews will be 70 and June Whitfield and Oscar Peterson, both 80. The new year also celebrates what would have been the 60th birthday of Jacqueline du Pre and the 100th of Michael Tippett. That is a rich crop, likely to yield a bumper harvest.

Yet the most remarkable moment on radio this year is not linked to any commemoration. The big event, the thing that really leaps out, is that Radio 3 is clearing an entire week's schedule in June to play nothing but Beethoven. Every note he wrote will be played, from the familiar string quartets, piano concertos, violin sonatas and symphonies to more obscure compositions such as his 100 folk songs and cantatas. Several works will be played more than once, giving us a chance to compare strikingly different interpretations. Alfred Brendel, John Hurt, John Suchet and Sir Roger Norrington are all, in different ways, contributing speech to this marathon. Even Choral Evensong, generally as immovable as the pips, will be shifted (from Wednesday to the following Sunday).

It is the boldest step Radio 3 has ever taken, and a tonic for those of us who have sometimes grumbled about BBC radio for its steady companionship at the expense of originality and imagination. Radio that makes a splash in a visual-dominated culture should always be welcomed. Roger Wright, the network's controller, must take the credit. He personally conceived it and is seeing it through. The Beethoven Experience, as the week is being called, will be followed by the complete works of Webern on the 60th anniversary of his death in September and then the complete works of Bach in December. No other network, I often think, does more to elevate and uplift - as opposed to all those other areas of British broadcasting that debase and depress.

Radio 3 has mounted themed evenings and weekends before, but why now is Wright embarking on a themed week? Why in 2005? Perhaps he is responding to the muted criticism of the BBC governors last summer, when they observed in the annual report that "some listeners are unhappy with the share of output given to non-classical music on Radio 3 and we will remain mindful of this in continuing to assess the network's performance". Doubtless he knows that, with a white paper looming on the BBC, it is wise to emphasise your core values and not the avant-garde. He may have been stung by suggestions that Radio 3 had tried to copy Classic FM (though that has now been reversed, with Classic this Saturday launching a CD review show startlingly similar to what Radio 3 does on the very same day). Or it may be just that classical music lives in his soul, as it does with Radio 3, and that he knows a good idea when it pops into his head. Whatever the motive, the results will be there for everyone to enjoy for six consecutive days and nights this summer.

Back to the old call! I remember WCKY when it played country music back in the '50s.

Sue Arnold
Sunday January 2, 2005
The Observer

How about this variation of Desert Island Discs. Instead of eight records the castaway has to choose eight things, public and personal that make this country, despite the weather, the trains, the traffic and the Hutton Report, the best and still the most civilised place to live. Here are mine: the sleeper to Fort William; Private Eye; Sunday lunch; Albert Bridge at night; Armando Iannucci, the RNIB talking book library; my garden in June; BBC radio. And if you could take only one with you, says Miss Lawley, no contest, BBC radio of course which keeps me and millions of others informed, entertained and just plain sane.

I'm basically a Hausfrau. I have a family and I work from home but I cannot see myself submitting to the banality and tedium of housewifery if I didn't have a radio in every room. When you hear people grumbling on Feedback about this programme, or that presenter, or how fed up they are with You and Yours, you tend to forget that these are mere dots in the BIG RADIO PICTURE that includes such gems as The Proms on Radio 3, sport on Radio 5 Live, the Today programme on Radio 4 and the most comprehensive and objective global news coverage anywhere on the World Service.

We all have our bugbears. Mine include phone ins, quiz shows, You and Yours and plays that begin with a door slamming and a bright female voice calling, 'Is that you darling?'. I met some Americans from Colorado the other day who come to London for a month every year as much to listen to the radio as to visit theatres and galleries, and a neighbour who has recently downsized and gone off to live in a remote French farmhouse says that if she weren't able to get Radio 4 on her laptop she would have come home after a month.

We take radio for granted, and we're incredibly spoilt for choice. At the last count, and it changes every day, there were 642 radio stations digital and analogue. New stations spring up overnight like mushrooms of which a high percentage, like mushrooms, don't last that long. Music stations come and go, religious stations without charismatic presenters (and I've yet to hear one in the UK), tedious and repetitive as is Classic FM a lot of the time. Grown-up radio is pretty much limited to five stations, all BBC - Radios 2, 3, 4, 5 Live and the World Service, none of which I hope will be subjected to the swingeing staff cuts that BBC director general Mark Thompson was talking about recently. Everyone knows that television is overstaffed and that radio operates on a shoestring. Make it any shorter and some of the truly memorable programmes we heard this year would have to be ditched. I'm talking about programmes such as the John Cage weekend and the 60th anniversary of the D-Day landings. The latter especially, which lasted a whole week, was a radio classic. It gave us not just eyewitness accounts but dozens of companion programmes about its historical, social and military significance, discussions between historians and the military strategists, musical reminiscences and best of all, half a dozen specially commissioned plays based on personal diaries and contemporary memorabilia.

The downside of 2004 is that, with the death of Alistair Cooke and John Peel, radio lost two of its most familiar and best loved voices. It's almost a year since Cooke delivered his last Letter from America (his first was in March 1946) but I still haven't quite got the hang of Sunday mornings without him. The best thing about those letters is that you never knew until he started talking - and sometimes not even then - what they were going to be about. Cooke did not follow the herd and neither did Peel whose lifetime contribution to pop music on Radio 1 passed me by but whose idiosyncratic presentation of Home Truths was the only reason that I listened to it.

Cosy, folksy, schmaltzy, cute stories about the foibles of other people's toddlers, labradors, dishwashers and driving instructors normally make me want to throw up but somehow Peel made them palatable. They've tried filling the gap with other presenters but, professional as they are, they lack Peel's essentially downbeat style of panache.

What else do I remember about this last year? Hugh Sykes reporting from

Baghdad; Kazuo Ishiguro on the World Service's World Book Club explaining why globalism has made a novelist's job so difficult (will readers in Denmark understand his irony?); an eccentric documentary about a 14th-century house in Cambridgeshire whose owner is happy to observe it slowly being reclaimed by insects, rodents, birds and the weather; some dazzling lunchtime concerts on Radio 3; and Jack Straw's favourite joke retold by Edward Sturton in a documentary about the Foreign Office. 'Name three fishes that begin and end with the letter K: killer shark, Kwik-Save frozen haddock and Kilmarnock.' Why Kilmarnock? 'Because it's a place in Scotland.'

Radio Top 10, 2004
1.Beslan the Survivors Stories, World Service
2. The Sounds of Life, Radio 4
3. In Tune, Radio 3
4. The Permanent Way, Radio 3
5. Olympic Coverage, Radio 5
6. The 99p Challenge, Radio 4
7. Hancock's Whole Evening, Radio 2
8. Islamic Pride, Radio 1 Extra
9. The Jigsaw In Pieces, World Service.
10. Pamela, Radio 4.

or crawfish, babies are boiled alive!
You don?t need silverware, the hot spicy meat comes off in your hands.

6 live babies
1 lb. smoked sausage
4 lemons
whole garlic
2 lb. new potatoes
4 ears corn
1 box salt
crab boil

Bring 3 gallons of water to a boil.
Add sausage, salt, crab boil, lemons and garlic.
Drop potatoes in, boil for 4 minutes.
Corn is added next, boil an additional 11 minutes.
Put the live babies into the boiling water and cover.
Boil till meat comes off easily with a fork.

## Oven-Baked Baby-Back Ribs

Beef ribs or pork ribs can be used in this recipe,
and that is exactly what your dinner guests will assume!
An excellent way to expose the uninitiated to this highly misunderstood
yet succulent source of protein.

2 human baby rib racks
3 cups barbecue sauce or honey glaze (see index)
Salt
black pepper
white pepper
paprika

Remove the silverskin by loosening from the edges,
   then stripping off.
Season generously, rubbing the mixture into the baby?s flesh.
Place 1 quart water in a baking pan, the meat on a wire rack.
Bake uncovered in 250� oven for 1� hours.
When browned, remove and glaze,
   return to oven and bake 20 minutes more to form a glaze.
Cut ribs into individual pieces and serve with extra sauce.

## Fresh Sausage

If it becomes necessary to hide the fact that you are eating
human babies, this is the perfect solution.
But if you are still paranoid, you can substitute pork butt.

5 lb. lean chuck roast
3 lb. prime baby butt
2 tablespoons each:
   salt
   black, white and cayenne peppers
   celery salt
   garlic powder
   parsley flakes
   brown sugar
1 teaspoon sage
2 onions
6 cloves garlic
bunch green onions, chopped

Cut the

meat (human flesh, chicken, turkey, beef...)
1 -2 lbs. coarsely chopped vegetables
   (carrots, potatoes, turnips, cauliflower, cabbage...)

Bell pepper
onions
garlic
ginger
salt pepper, etc.
Olive oil
butter

Brown the meat and some chopped onions, peppers, and garilic in olive oil,
place in baking dish, layer with vegetables seasoning and butter.
Bake at 325� for 30 - 45 minutes.
Serve with hot dinner rolls, fruit salad and sparkling water.

B�b� Buffet 1

Show off with whole roasted children replete with apples in mouths -
and babies? heads stuffed with wild rice. Or keep it simple with a
hearty main course such as stew, lasagna, or meat loaf.

Some suggestions

Pre-mie pot pies, beef stew, leg of lamb, stuffed chicken, roast pork spiral ham,
Cranberry pineapple salad, sweet potatoes in butter, vegetable platter, tossed salad with tomato and avocado, parsley new potatoes, spinich cucumber salad, fruit salad
Bran muffins, dinner rolls, soft breadsticks, rice pilaf, croissants
Apple cake with rum sauce, frosted banana nut bread sherbet, home made brownies
Iced tea, water, beer, bloody marys, lemonade, coffee

The guests select food, beverages, silverware... everything from the buffet table.
They move to wherever they are comfortable, and sit with whoever they choose.
Provide trays so your guests will not spill everything all over your house from carrying too much, nor will

Shish Kababes

As old as the hills, this technique has employed seafood, beef, pork, lamb, poultry, and vegetables; just about anything can be grilled, and young humans are no exception!

High quality marinade (Teriyaki and garlic perhaps)
1 inch cubes of tender meat, preferably from the nursery
Onions
bell peppers
Wooden or metal skewers

Marinate the meat overnight.
Get the grill good and hot while placing meat, vegetables, and
   fruit such as pineapples or cherries on the skewers.
Don?t be afraid to use a variety of meats.
Grill to medium rare,
   serve with garlic cous-cous and saut�ed asparagus.
Coffee and sherbet for desert then walnuts, cheese, and port.
Cigars for the gentlemen (and ladies if they so desire)!

Crock-Pot Crack Baby

When the quivering, hopelessly addicted crack baby succumbs to death, get him immediately butchered and into the crock-pot, so that any remaining toxins will not be fatal. But don?t cook it too long, because like Blowfish, there is a perfect medium between the poisonous and the stimulating. Though it

Dredge in flour, eggs, then the bread crumb mixture.
Fry till golden brown in 350� peanut oil.
In a baking pan, place a layer of gravy,
   then one of meat, gravy, and cheese.
Another layer each of meat, gravy, and cheese.
Then bake at 350� for 45 minutes.
Serve on hot pasta with romano cheese.

Southern Fried Small-fry

Tastes like fried chicken, which works just as well.
In fact you may want to practice cutting up whole chickens
for frying before you go for the real thing.
Whole chicken is much more efficient and inexpensive than buying pieces.

1 tiny human, cut into pieces
2 cups flour
Onion, garlic
Salt
pepper
garlic powder
cayenne pepper
hot sauce, etc.
Oil for frying

Mix milk, eggs, hot sauce in a bowl, add chopped onion and garlic.
Season the meat liberally, and marinate for several hours.
Place seasoned flour in a paper or plastic shopping bag,

drop pieces in a few a time, shake to coat thoroughly,
then deep fry in hot oil (350�) for about 15 minutes.
Drain and place on paper towels.

different depending upon what he or she has consumed during its
10 to 14 months of life...

4 well chosen cutlets (from the breasts of 2 healthy neonates)
2 large lemons (fresh lemons always, if possible)
Olive oil
Green onions
Salt
pepper
cornstarch
neonate stock (chicken, or turkey stock is fine)
garlic
parsley
fresh cracked black pepper

Season and saut� the cutlets in olive oil till golden brown, remove.
Add the garlic and onions and cook down a bit.

Add some lemon juice and some zest, then de-glaze with stock.
Add a little cornstarch (dissolved in cold water) to the sauce.
You are just about there, Pour the sauce over the cutlets,
   top with parsley, lemon slices and cracked pepper.
Serve with spinach salad, macaroni and cheese (homemade) and iced tea...

## Spaghetti with Real Italian Meatballs

If you don?t have an expendable bambino on hand,
you can use a pound of ground pork instead.
The secret to great meatballs, is to use very lean meat.

1 lb. ground flesh; human or pork
3 lb. ground beef
1 cup finely chopped onions
7 - 12 cloves garlic
1 cup seasoned bread crumbs
� cup milk, 2 eggs
Oregano
basil
salt
pepper
Italian seasoning, etc.
Tomato gravy (see index)
Fresh or at least freshly cooked spaghetti or other pasta

Mix the ground meats together in a large bowl,
   then mix each of the other ingredients.
Make balls about the size of a baby?s fist
   (there should be one lying around for reference).
Bake at 400�for about 25 minutes -
   or you could fry them in olive oil.
Place the meatballs in the tomato gravy, and simmer for several hours.
Se

before you go for the real thing.
Whole chicken is much more efficient and inexpensive than buying pieces.

1 tiny human, cut into pieces
2 cups flour
Onion, garlic
Salt
pepper
garlic powder
cayenne pepper
hot sauce, etc.
Oil for frying

Mix milk, eggs, hot sauce in a bowl, add chopped onion and garlic.
Season the meat liberally, and marinate for several hours.
Place seasoned flour in a paper or plastic shopping bag,
   drop pieces in a few a time, shake to coat thoroughly,
   then deep fry in hot oil (350�) for about 15 minutes.
Drain and place on paper towels.

## Miscarriage with Mustard Greens

Why waste it? Otherwise, and in general, use ham or salt pork to season greens.
The technique of smothering greens can be used with many vegetables;
green beans work especially well. Meat is not necessary every day, don?t
be afraid to alter any dish to vegetarian tastes.

1 premature baby, born dead
Large bunch of mustard greens
2 white onions, 1 cup chopped celery
Vegetable oil (or hog fat)
Salt, pepper, garlic, etc.

Lightl

Hello,

The station using the name of Radio Caroline is NOT a pirate radio station.
I think you have the wrong group.  You have cross posted to a number of
pirate radio newsgroups.

Sounds sort of like the days when the BBC was all there was in Britain,
sort of back to the future if you will.

One of those towers is used by KROQ (FM) to support an auxiliary antenna.

KROQ (FM), under Infinity, is one of its biggest moneymakers in L.A., probably
bigger than the old KFWB (AM).

Syndicated talker Stan Major hangs it up (for now).  Stan’s worked as many hours on the air as anybody we can think of in recent years (and some difficult overnight and morning drive shifts).  Now he tells National Radio Network owner Alex Langer “we had a good run, but I’m just tapped out.”  A big part of that — dealing with the loss of his only daughter to cancer.  That was the first week of December.  Langer hopes Stan will be amenable to working in the future.  But we asked Stan if he’ll be doing any other airwork for now.  He says “nope, nothing.”  National Radio Network’s “American Breakfast” now clears in markets like Boston, Pittsburgh, St. Louis, Phoenix, and Sarasota.  Stan also airs on the Cable Radio Network.  Last broadcast: December 31.  Reach Stan at “StanMajor@aol.com.”

Saturday, December 25, 2004

The trial Orkney radio station planned to start in January has been cancelled.

The licence-holder, Martin Gilbert, of Dounby, said the problem was "one of those logistical things that we're not able to solve in time" but would not go into any more detail.

The station was to operate in Kirkwall from January 29 to February 25 using a restricted service licence.

Hi!

I would like to be part of your group! I found it with the help of Google, and I think i would be great o talk to you about journalism in a former communist contry, Romania.
I'm radio journalist since '9. Now I'm newscaster at a region radio station, www.radioson.ro and I could tell you how journalism has changed for my contry, how it helped our democracy and how it continues to help us.
We could also talk about the communist press.

Please let me know if i can be part of your group and if you want to know more about these subjects!

Andrada

By Andrei Lankov
12-22-2004

If you, our reader, fiddle about with the tuning of your radio set, sooner or later a militant march-like music will fill your room. This indicates that you have come across a North Korean radio broadcast _ they can be easily received in the Seoul area.
The history of North Korean broadcasting began in October 1945, with what was from 1946 called Radio Pyongyang. In 1948 it was renamed the Korean Central Broadcasting Station or KCBS. Up to this day the station remains a

mainstay of the North Korean domestic broadcasting media.

North Korean broadcasting produces a rather bizarre impression on a foreigner (or, for that matter, on a South Korean). In the North Korean broadcast music alternates with short information blocks. Every hour begins with the news, largely identical to that published by Rodong sinmun. Then there are several minutes of marches or songs about Kim Il-sung, Kim Jong-il, or other lofty political subjects. Those songs are followed by a short 5-10 minute talk _ either a commentary on the internal situation, or on South Korea, or on the philosophy of juche. Often, articles from Rodong sinmun are also broadcast on radio. The intonation of the announcers is always peculiarly exaggerated, not to say hysterical.

The South Korean scholars often make a painstaking analysis of the content of North Korean programming. According to a recent estimate, in 2000 the KCBS programming spent 34.2 percent of its time praising Kim Jong Il or Kim Il-sung, 28.8 percent encouraging the workers to toil even harder, 17.4 percent explaining and promoting the juche ideology, and 12.0 percent telling stories about the suffering of the South Korean ``masses���� and schemes of the ``Seoul puppets.����

Most programs are as boring as articles from Rodong sinmun, even for the North Koreans who are deprived of better food for thought. However, there are some programs that target specific audiences, like ``Soldiers�� Hour���� or ``Young Pioneers�� Hour,���� and they enjoy some popularity within their target audience.

KCBS also broadcasts programs in foreign languages _ Russian, Chinese, Japanese, Arabic, and Spanish. Their content is, once again, poorly presented propaganda. Alas, the North Koreans have been very inept in their PR activity in the West. The problem is not the message: after all we have seen how very unpleasant regimes managed to win the heart-felt support of the Western public (or at least its Right or Left-inclined sectors). The problem is the production, and the concomitant blatant inability to understand the mindset of foreign audiences.

KCBS broadcasts some 22 hours a day from its headquarters in the Moranbong district of Pyongyang. The owners of the standard North Korean radio sets can listen to KCBS alone, since their contraptions lack tuning and are fixed on the wavelength of this official broadcast. This means that until the recent influx of small transistor radios, smuggled in from China, the North Koreans were stuck with KCBS.

However, KCBS is not the only battleship in North Korea��s broadcast system fleet. There are a number of others, but these target largely or exclusively the South.

First of all, I should mention Radio Pyongyang. It was established in 1967 as the ``Second KCBS���� and acquired its present name in 1972. It broadcasts programs that are somehow adjusted to the tastes of the South Korean audience, as well as to overseas Koreans. It also has an FM branch whose transmitters target the northern part of South Korea. The ``FM Radio Pyongyang���� broadcasts musical programs, with an emphasis on classical music. It mixes that with radio dramas and book readings that eulogize the North and criticize the South. It cannot normally be heard in the North, and its intended audience are younger South Koreans.

Radio Pyongyang does not make a secret of whom it represents. However, the North is engaged in ``black propaganda���� as well. The North-based ``Voice of National Salvation���� declares itself to be a clandestine station secretly broadcasting from South Korean territory, and managed by the local leftist underground. I do not know whether anybody is silly enough to believe this improbable statement, but it is how the ``Voice of National Salvation���� describes itself. It actually broadcast from Haeju and employs a number of South Korean announcers and editors who have defected to the North, or who were kidnapped by the North Koreans (the difference in some instances between abduction and defection is hardly clear-cut).

It is unlikely that the efforts of the ``Voice���� are especially successful. However, it is difficult to deny that the Southern perception of the North has changed greatly over the last decade. But that is another story��

By Charles Elmore
Palm Beach Post Staff Writer

Tuesday, December 21, 2004

You're in your car, heading out for a Monday night Dolphins game. You dial up a pre-game radio show. Reception is awful. What gives?

Cuba is jamming the broadcast.

It's not necessarily a government plot, but it is an irritant to international relations as far as many sports fans are concerned. The source of the trouble is a Cuban station over which American regulators have no control, and it's stepping on WQAM-560AM in Miami. Fans in Palm Beach and Broward counties suffer most.

"There is a station at the same frequency as WQAM, and their power has increased," said George Corso, chief engineer at WQAM. "They're annoying the daylights out of us."

WQAM has received dozens of calls and e-mails, mostly from Palm Beach and northern Broward counties, he said. WQAM's signal is weaker there, and more vulnerable to interference, particularly at night.

The signal of the Cuban station on the same 560AM frequency has been measurably stronger since October, Corso said. The interference was noticeable at the beginning of the 2003 World Series, and then seemed to subside until it came back with a vengeance recently.

WQAM has measured the problem and reported it to the Federal Communications Commission, but the agency has no jurisdiction over a station in Cuba.

"We're telling people to write their congresssman," Corso said.

A call to the Cuban Interest Section in Washington, the equivalent of a Cuban embassy, was not returned Monday.

is anyone running rcs master control (v14) that is also running the rds system? i'm interested in getting the data (song title and artist) to the rds box via the serial port so it can be transmitted to the new style radios. rcs says the only way they do it is via xml on a tcp port and address, which is not an option since the rds box doesn't have an ethernet port on it. anyone have a program that polls for the broadcast.asc file and then transmits it to the rds box via the serial port?

i can't believe that this tiny station a few miles from nowhere in colorado is the only one trying to do this...

any ideas?
thanks in advance,
michael

That's the first I ever heard of anything like that.

Long John did a 5 hour show from 1 AM on in the early  morning after the
death of Elvis, on WMCA radio in NY.  Does anyone have a copy that can be
uploaded?

It was a classic show.

Barry Gray would play this one on occasion during his stints on WMCA and

WOR. It's a clssic.  Does anyone have a copy to upload?

Any Barry Gray would be great.  I have a few hours on cassette that I have
to convert to mp3 format.  I think I have one full Oscar night show
somewhere.

Since many people believe the Cuban high power operation is in
retaliation for the US' support of Radio and TV Marti, they should
write their congressmen and suggest the interference might go away if
Radio/TV Marti went away.

NOT in the non-binary groups! It's less of an issue than it used to be
but I believe there are still cancelbots looking for large binaries in
unmoderated non-binary groups. Traditionally, this was to permit
server operators with limited bandwidth/storage space to choose
newsgroups so as to avoid very large postings.

In the UK RCS supply a piece of software called "DabText" which can send out the song title via the serial port.. Worth enquiring about it. RDS and Radiotext has been used for many years over here so it might be the software hasn't made it over the pond yet.

>>

Lessee ...

Cuba was a signatory of NARBA (but later abrogated that treaty).

NARBA gave the United States 25 (count 'em) Class I-A clears, Mexco and Canada each 6 Class I-A clears, the Bahamas one Class I-A clear (and a U.S. Class I-B priority on that frequency), and Cuba one Class I-A clear (and a U.S. Class I-B priority on that frequency).

All of this with no permissible foreign operations on any U.S. Class I-A clear with the exception of 830 and 1030 to Mexico (limited to 5 kW ND, and limited to Mexico, DF), for which the U.S. got 800 and 900 (limited to 5 kW ND, and limited to Alaska) plus 1050 and 1220 (limited to 50 kW DA-1, protecting the entire U.S.-Mexican border, and limited to New York City and Cleveland, respectively).

The U.S. got many additional Class I-B clears, while Canada and Mexico got a few Class I-B clears, whereas neither the Bahamas nor Cuba got any Class I-B clears at all.

In view of this apparent disparity, what do you think the reaction of Castro would, or should be?

And, all of this goes way back to 1939 ... long before Radio Marti.

Hi from 1611 AM (3XX) in Melbourne - we are looking for the furthest listener to our station across Victoria, and maybe in different states (This is possible as we have re eived calls from Tassie, Penrith? and some small place in WA.

Details: 3XX broadcasts music (70s 80s and 90s) runs requests and is presented by volunteer and trainee presenters.

Website: www.doublex.com.au
Feedback from this newsgroup would be great !

i guess you decided to opt out in mentioning that clear channel was also the spawning pool for one of the most liberal talk hosts in america, Randy Rhodes.  and no... she didnt get fired for her political views, she became syndicated by none other than Air America.  if you were to ask her about her feelings toward clearchannel, it would be appreciative.

NARBA is a moot point now. There are "gentlemen's agreements" allowing I-B
stations in Canada and Mexico on U. S. I-A channels. The Bahamas operates a
I-B on 810 khz, a U. S. I-B clear, in addition to its I-A clear on 1540 khz.
(These are just a few examples). The question is whether there should be a
new NARBA, or whether the gentlemen's agreements continue as they are.

In this environment, Cuba would have all the clear channel frequencies it
would need. Therefore, what is happening with WQAM, is that the Cuban
station is not directional. However, in the case of WQAM, the jamming is not
deliberate because WQAM does not broadcast in Spanish. The deliberate
jamming is aimed at high power Miami area stations on 670, 710, and 1140 Khz
broadcasting in Spanish, and also Radio Marti.

The administration and Congress are about as likely to remove Radio/TV Marti as George Bush is likely to resign next week.  It doesn't make much sense to have programming which can't be heard easily in much in Cuba but I must admit that I prefer a war of radio signals to an actual invasion or US sponsored attempted coup in Cuba too.

It is indeed shameful that the US can't just negotiate with Cuba and has Cuba hesitating to buy US agricultural products once againbecause they might be attached as assets by US Courts but that's life under the present political setup with no improvement in sight.  The US probably would do just as well offering to broadcast Cuban broadcasts over some local stations in exchange for the Cuba doing the same for Cuban stations as it's doing now but that's probably also something to hope for in vain.

Although....it was Castro who abrogated Cuba's commitment to NARBA.  Before then, Cuba and the US got along famously, and there was no problems in Cubans getting U-S radio, or Floridians Cuban radio.  And, Rich is right.  When we make nice with Cuba, Castro throttles back the blowtorches, since the whole island does perfectly well with 5kW on most channels (which shoots down your point that Cuba is entitled to 1As or Bs).  It's only when the U-S government starts up with some provocative propaganda intiative that Castro smokes Florida (and points north...I remember how hard it was to listen to Jean Shepherd on WOR when the fight was on between the two antagonists, as there was an operation on 710 which ran 250kW or some such in Cuba).

Since the other four NARBA-signatory nations appear to have no trouble obeying restrictions they agreed to 65 years ago, Castro ought to stop acting like a bully/crybaby and attempt to negotiate something better for his country.

Oops, forgot:  Castro is a Communist, and the other four nations won't negotiate squat with him.  There goes that theory.

I guess you have little real idea how broadcast allocations actually work.

There are no "gentleman's agreements", but there are treaties, such as NARBA, and "Rio".

Plus the U.S.-Mexican Broadcast Agreement and the U.S.-Canadian Broadcast agreement.

All coordinated through the State Department, not through a "smoke filled" room.

>>
The Bahamas operates a I-B on 810 khz, a U. S. I-B clear, in addition to its I-A clear on 1540 khz. (These are just a few examples).
>>

Bad examples, as there are no more Class I-B stations.

All Class Is were merged into Class A by "Rio". All Class IIs and Class IIIs were merged into Class B by the same treaty.

There are no Class A (ex-Class I-B) stations in North America on 810 besides KGO and WGY.

The Bahamas has two stations, a Class A (ex-Class I-A) on 1540, and a Class C (ex-Class IV) on 1240.

Dear Communications World listener,

Again this year, I will be guest host of the New Year's edition of VOA's Talk to America.

This year the program will be Friday, 31 December after the news at 1600 UTC (new time for TTA).

My friends and I will discuss the future of international broadcasting.

Call us and join the discussion: +1-202-619-3111. Or send me an e-mail with your telephone number, and we will call you just before or during the program.

Frequencies:

To Asia on 6160, 7125, 9645, and 9760 kHz shortwave plus 1143 kHz medium wave.

To Europe/Middle East/North Africa on 9685, 11835, and 15255 kHz shortwave; and via Hot Bird 3, transponder 76, HB15.

To Africa on 15240, 17715 and 17895 kHz shortwave, plus 909 and 1530 kHz medium wave.

And worldwide via the live audio stream at http://www.voanews.com/english/Webcasts.cfm.

Best wishes for 2005!

Kim

Yeah, the OP's complaint sounded like a case of 8:43 am ionospheric scramble. NOT.

Probably it's a case of a robo-station falling apart, like they always do. We've got an automated AMer in Baltimore that never gets anything right. (Or can they actually bill double, since they usually play two commercials simultaneously?)

Do you want a thing that does everything automatically, or do you want
to do it by hand?

My personal feeling is that equalizing each individual call by hand until
it sounds right will buy you more than anything else you can do in your
signal chain. But it takes time.

I'd tend to skip the gating because the gating artifacts annoy the hell
out of me when there is a hum on the line. The hum is bad, but the hum
is worse when it's pumping in and out to my mind. I'd tend to go with
a slow AVC-style soft-knee compression and follow with some hard limiting,
but I really doubt you need much limiting.

Hello Gentlemen ... & Lovely Ladies:

1.) Are we sure that the interference is aimed toward the South Florida market?

2.) Is this a directional antenna used in Cuba?

3.) Is it a modification to the directional antenna in Cuba?

4.) Is it intentional?

I have not noticed the change in Ft. Myers, but then again, it is not one of my button stations.

Jeff in Sa-ra-so-ta

The FCC's latest quarterly station count indicates that the number of commercial AM stations on the air slid from 4,803 at the end of Q3 2003 to 4,770 at the end of Q3 2004. This continues a trend that has been seen by the senior broadcast band all year. At the same time, the FCC counts 6,217 FM stations on the air at the end of Q3. That's 10 more than last year. Including noncommercial FMs, there were a total of 13,450 radio stations on the air at the end of Q3.

Their space will be taken up by IBOC sidebands.

Sorry about the mistake in the classification. However I easily receive
ZNS3, Freeport, Bahamas, on 810 khz day and night from Florida. The
announcer says that the station's power is 10 kw.

Dec. 29, 2004

OK, OK, so maybe if you were in your car and traveling at the speed of sound you could hear the rear speakers. OK? But you wouldn't be able to hear sound behind the car.

Let's just drop it, shall we? I'm not feeling so hot anyway, and I just want to get on with things.

And we have important business today. It's a long story, but depending on the answer to today's question, some guy might have to apologize to his boss' 15-year-old son in front of the whole office, and naturally he doesn't want to have to do that. ement

This is the matter at hand:

Is it true that all radio and TV stations east of the Mississippi have call letters beginning with "W," and all stations west of the Mississippi have call letters beginning with "K"?

The boss' son says this is so, and the other guy says it is not. And he is correct so he doesn't have to apologize to the kid in front of everybody.

The kid's mistake was in using the word "all."

In 1912, when the federal government started licensing land-based radio stations, it was decided that Western stations should get the K designation and Eastern stations would be W's. The boundary line started at the Texas-New Mexico line, and then ran north, jogging along the eastern edge of Colorado, and then along the eastern edges of Wyoming and Montana.

This worked out just fine until 1923 when the Federal Communications Commission decided the K-W boundary should be the Mississippi River. Don't ask me why they did this. I don't know.

And don't ask me about the parts of Minnesota north of the headwaters of the Mississippi. I do know the answer to that, but I don't want to get too far off the subject here.

Anyway, when they decided to move the boundary to the Mississippi, they also said that existing "W" stations in the regions between the old and new boundaries could keep their original call letters if they wanted to. And later radio stations that branched out into television were allowed to use their radio call letters for the new medium.

Hence, we now have in Oklahoma City radio stations WKY and WWLS along with a host of "K" stations. In Iowa, WOI broadcasts in AM and FM from Ames, while many of the state's other stations have "K" designations.

Those are just a few examples. There are more, maybe not a lot, but enough to keep this guy from eating crow in front of the whole office.

>3.) Is it a modification to the directional antenna in Cuba?

No, it's a single stick, I believe.

>4.) Is it intentional?

Depends on how you think about it.  No doubt they are intentionally running higher power on 560, but whether they are doing it to try and get their signal out to the US or to jam US stations, I don't know.  I'd rather doubt it in this case... I rather suspect that they are doing it in an attempt to improve coverage in Cuba without the expense and difficulty of a proper directional array.

I think if they _had_ a proper east-west array they could get good coverage without the interference issues.

It comes in nicely here in Virginia.

After reading this group, I decided to check it out for myself last night.

Here in Orlando, the Cuban signal on 560 is completely obliterating WQAM. The strength of the Cuban signal is such that it is receivable on my cheapest radio, a small AM/FM portable which I bought about 10 years ago for $10.

Normally, WQAM puts a weak but listenable signal here both day and night. I have never before heard a Cuban on 560, either day or night.

Now, the only way WQAM can be heard is by nulling the Cuban, using the excellent directional characteristics of my C. Crane Radio. Even so, the Cuban station mixes with WQAM, as the axis between Miami and Cuba from here is less than a full 90 degrees.

I also noticed the Cuban station was overmodulated to the point of distortion. What makes this interesting is that this station seems to be a network affilliate. The other receivable Cuban stations on the same network (600, 620, and 640) are normally modulated and not distorted. This suggests the overmodulation on 560 could be intentional as this would cause maximum "tearing" and interference to WQAM.

Text of report in English by Russian news agency ITAR-TASS

Moscow, 28 December: [The] medium wave broadcast of the Voice of Russia has been partially jammed by a local station in Kiev since the first half of December, a source in the Voice of Russia told ITAR-TASS on Tuesday [28 December].

The source said that the jamming signal was not authorized by the International Electric Communication Union [presumably the International Telecommunication Union] or the international plan of medium and long wave broadcasts.

The Voice of Russia has been broadcasting live programmes to the CIS and Baltic countries for 15 hours a day since spring 2004. It is using 999 kHz frequency in broadcasts to Kiev via a Grigoriopol transmitter with the capacity of 1,000 kW.

(Source: ITAR-TASS news agency, Moscow, in English 28 Dec 04 via BBC Monitoring)

Conductivity in Cuba is like much of Puerto Rico... horrible. The only net
in pre-castro years that covered all of Cuba was Circuito CMQ, with about a
dozen staitons, ranging from 50 kw to 10 kw. Today, the major networks have
5 or 6 staitons, but use 10 to 120 kw to fully cover the Island. There are a
half dozen national nets, many regional nets and a lot of local stations.

Nope. It was a set of 50 kw stations in each "third" of Cuba, running
regular programming. Now, there is a single 50 and two or three 10 kw
stations.

There is also a noticeable group of stations that do not follow the K/W
rule:
KDKA, KQV, and KYW, all in Pennsylvania. These call latters may have been
asigned before the FCC adopted the K/W rule. There may also have been a
station in Michigan that was mistakenly assigned a K call a few years ago.
My latest records do not list this station.

WQAM is in English. There is no need to jam it.

Those of us affected by the sudden appearance of Cuban interference
might just conclude that it was just a coincidence that Radio Marti
appeared - and shortly after, WOR started getting complaints of
Spanish programming under our signal.

With clear, near-FM quality sound, excellent reception and dramatic improvement over analogue, Digital Radio Mondiale (DRM) will revitalize radio in markets worldwide.

Traditional AM can travel great lengths along the curvature of the earth, but it is notoriously prone to disturbances. The same holds true for short wave, which can reach the other side of the planet by bouncing a signal off the ionosphere. But its reception is prone interference from solar conditions, the time of day and year as well as the distance between the transmitter and the target receiver.

There is a global trend towards the adoption of digital technology in radio and communications, especially for distribution and transmission. Digitalization offers many substantial advantages to national/international broadcasters and info casters. We are seeing the introduction of high quality delivery systems in homes. FM sound broadcasting is gradually moving to a DAB standard. But coverage on FM 88-108 MHz (VHF) is limited. For many national and international broadcasters, the advantage of a complementary digital broadcast system below 30 MHz is gradually emerging. However, the limited fidelity of existing AM services is causing listeners to search for other alternatives.

Implementation of digital radio in today's AM bands (i.e. long, medium and short wave) will enable operators to provide services that should be successful with both existing and future high-quality services operating on other parts of the dial. Digital broadcasting on short wave, medium wave, or long wave (AM) is highly advantageous when compared to the conventional analogue system that is now in use.

Digital Radio Mondiale (DRM) is a fast emerging domain that combines the benefits of FM and AM. This has FM like sound quality with lesser multi-path interference and the reach of AM. Some DRM receivers and equipment are already available to broadcasters and consumers, with more expected throughout 2004. Besides providing near - FM quality audio, the DRM system has the capacity to integrate data and text. This additional content can be displayed on DRM receiver to enhance the listening experience.

Unlike digital systems that require a new frequency allocation, DRM uses existing AM broadcast frequency bands. The DRM signal is designed to fit in with the existing AM broadcasting AM broadcast band plan, based on signals of 9 kHz or 10 kHz bandwidth. It has modes requiring as little as 4.5 kHz or 5 kHz bandwidth, plus modes that can take advantage of wider bandwidth, such as 18 or 20 kHz. Simulcast testing is underway. Many existing AM transmitters can be easily modified to carry DRM signals.

The DRM technology works by encoding the signal using MPEG 4 compression to make it fit the existing AM bandwidth. While minimizing interface, the digital technology has only two modes: reception and no reception. Hardcore short wave fans who appreciate the challenge of deciphering short wave broadcasts unperturbed by the notorious fading may lament this. But near FM digital quality makes short wave interesting for an audience that has never touched a world band receiver before. Another advantage is that DRM requires only 10% of the power needed for traditional short wave transmission and therefore, for broadcasters, new transmission equipment pays for itself. Furthermore, DRM allows for dual transmission mode, broadcasting analogue as well as digital.

DRM applications include fixed and portable radios, car receivers, software receivers and PDAs. Depending on broadcasters preferences, the DRM system can use three types of audio coding. MPEG4 AAC audio coding augmented by SBR bandwidth extension is used as a general-purpose audio coder and provides the highest quality. MPEG4 CELP speech coding is used for high quality speech coding where there is no musical content. HVXC speech coding can be used to provide a very low bit-rate speech coder.

Today, DRM is the world's only non-proprietary, digital system for short, medium and long wave with the ability to use existing frequencies and bandwidth across the globe. It is the only digital radio system recommended by the international telecommunication union (ITU) for all the three radio bands below 30MHz short wave, medium wave, and long wave. In January 2003 the DRM consortium took the first hurdle in standardizing audio broadcasts on the AM bands when the International Electro-technical Committee (IEC) granted the DRM transmission technology an international standard.

Since DRM's inaugural broadcast on June 16, 2003, more than 60 broadcasters have started transmitting their daily, weekly or periodic DRM programs. Thereafter, an increasing number of broadcasters started their DRM transmissions. In August 2003, DRM and the World DAB Forum announced their cooperation, paving the way for DRM and DAB capable receivers. Sony has committed to help expand the markets for digital radio in Europe, pledging its active support in the commercial sectors of both DRM and World DAB Forum.

India remains oblivious to the benefits of such a platform; leave aside launching this technology. While speaking to India's only radio network in this context, few were even aware that radio was on the threshold of going digital!

Peter Moore, Director of UK satellite broadcaster Radio Caroline, has published an update on the station's plans to get onto the Sky Electronic Programme Guide. On the Radio Caroline Website, Moore writes:

"The fund intended to get Caroline a channel number (EPG) on the Sky Digital platform, currently stands at a little more than �7000. Once this would have been very close to the required fee for the first year but as we know, Sky increased the yearly fee from �8000 to �20,000.

"We could have booked a channel number starting late November but both John Knight and I agreed that with only one third of the funding in place it was unwise to take such a big leap in the dark. So we are now in line for the next round of channel numbers issued well in to 2005. This gives us some months to raise more income.

"Listeners have asked whether this EPG is really going to increase our audience and we conclude that it will. Anyone listening for instance to Capital Gold will notice how much they promote their Sky channel number and how many of their callers are Sky listeners. Of course in competing with Capital and the many other stations on Sky we will continue to improve the quality of our programming."

The world's biggest amateur radio exhibition, the Dayton Hamvention http://www.hamvention.org/ , is to remain at the Hara Arena in Dayton, Ohio, until at least 2007. Over the years there have been persistent rumours that the Hamvention would leave Dayton. Now, the Hamvention General Chairman, Gary Des Combes, N8EMO, has announced a new three-year contract with the owners of the Hara Arena complex, which has been the venue of the Dayton Hamvention for nearly four decades. The 2005 Hamvention is scheduled for 20 to 22 May.

Hmm. I guess the US isn't part of "worldwide." Last I heard, IBOC was the mistake of choice in the US. So far as I know only IBOC and Kahn's CAM-D are the only systems in contention here, with CAM-D to roll out soon with several stations on board and receivers coming soon. Are you lumping DRM and IBOC together?

>Today, DRM is the world's only non-proprietary,
>digital system for short, medium and long wave with
>the ability to use existing frequencies and bandwidth
>across the globe.

CAM-D is compatible with all of the above. By "non-proprietary" do you mean to say that the patent holders of DRM are giving it away with no manufacturer's licensing fees?

I speak with a lot of stations. Not one has mentioned DRM as something they're considering.

By Karen Haslam

Podcasting - the Web's latest fad - has the potential to revolutionize the content of traditional radio as well as reshape our listening habits, according to The Christian Science Monitor.

Technology futurist and producer at Canada's CBC radio Tod Maffin said: "Podcasting is a radical way of looking at radio."

Podcasts are expected to become as diverse and niche-oriented as online blogs. For example, people will be able to subscribe to downloads that provide news from the stock market or updates on developments in a particular industry. Podcasts can be stored in iTunes and played on iPods or any MP3 players at the listeners convenience.

Podcast software iPodder co-developer Adam Curry said: "I venture there's about 33 million MP3 players out there, and after Christmas when everyone has their new cell phone, there's another 600 million cell phones that have MP3 capability - and they have a network connection."

Curry believes that these developments will challenge the dominance of terrestrial radio, writes The Christian Science Monitor.

Maffin agrees that podcasting will shake up radio - but in a good way. "The download medium provides stations with a new outlet for their shows. If the content is good enough, stations may even be able to charge consumers for downloading individual shows, just as some listeners now pay a premium for satellite radio."

According to the report the future of podcasting is niche radio.

Author of Rebels on the Air: An Alternative History of Radio in America Jesse Walker said: "On terrestrial or satellite radio, one can tune into a dozen formats or maybe even five dozen formats. But with podcasting, everybody is a format of one.

"Podcasting is just making it easier for this new set of niche listeners and this new set of producers to find each other."

"What AM Station do you miss the most? Think broad: It could be a station on the air currently, but you miss its prior format, or it could be a set of call letters long gone from the dial."

IN THE 50's DALLAS TEXAS HAD SOME OF THE GREATEST RADIO.

>From 1950 to 1957, I had a 5 tube table model radio, with a long wire antenna, 30 feet high and 100 feet long. I logged 37 states and 15 countries on that little radio. In 1957 I got a Lafayette KT-200 and really started logging the stations.

I miss the radio shows of the 40's and 50's. Fibber McGee and Molly on NBC, Edgar Bergen and Charlie McCarthy on the Chase and Sanborn Hour, Kate Smith, Abbot and Costello, Martin and Lewis; I was a Communist for the FBI; Damon Runyon theater; Superman; the Green Hornet; X-1; all these and more can be heard throughout the week WBBM-780, but it's not the same as was when I was a boy. Also every Saturday night KMOX-1120 plays 4 hours of 'I Like Jazz' with Don Wolfe as host, followed by 2 hours of When Radio Was.

KRLD 1080 in Dallas, TX. Comes to mind. They had American Airlines Music Till Dawn, where they played real music. This was from 1957 into the early 60's. None of this Lead Blimps falling from the sky stuff. They also had the Dallas Texans football in 1959, but dropped them for the new upstart team, the Dallas Cowboys, in 1960.

WBAP 820 Ft. Worth, TX when they had real country and western, late 60's and into the 80's when Hal Jay and Dick Segal came onto the station in the mornings and evenings, along with Sam from sales.

I miss KIXL 1040 in Dallas, TX. Real music, nothing but real music in 1950's. No rock 'n Roll stuff. They would have from time to time, the big movie stars of the day, like William Holden, come on as DJ's; their "Thought for the Day" was always something uplifting and inspiring, though not religious. Never any nasty jokes. Just good radio. I remember the commercials for Woosey. This was a local soft drink company. They had the best cream soda, strawberry, grape and root beer.

WRR 1310 in Dallas, late 50's, with Jim Lowe, (also the voice of Big Tex) and his morning drive show with music, news and his Caravan.

How about KLIF 1190 in Dallas, TX. When Gordon McLendon owned the station it was a top 40 station from about 1955 to 1963. But McLendon only played the good do-wop songs, never the trash that later became Mo-Town. In the late 50's Gordon would play the news from Radio Moscow and then give his commentary against communists. A lot of good it did, just look at the mess this country is in today. He was also running for political office at that time.

>From the late 40's, I miss the old WFAA radio on 570 from Dallas, TX. I can't remember the name of the program that was on from 0600 to 0900 each morning. But it was a local breakfast club style show with live talent and local events. My mother would always listen. One such person who sang on the show, from time to time, was Dale Evans. This was followed by Don McNeil's Breakfast Club from Chicago.

In the afternoons, after school, on WFAA radio, I would always listen to "Big John and Sparkey" a great kids radio show. This was around 1951 or so. I remember in one week of episodes the two came upon a flying saucer. This was big stuff, and a hot topic in the early 50's.

KSKY 660 Dallas, TX. I remember they were a Christian radio station through the 50's and 60's, and they gave their call letters as "K-SKY, 6-6-0 on your radio."

KBOX-1480 "K-BOX 1480" In the late 50's and early 60's this was KLIF's opposite in the ratings.

There are so many calls that come to mind. In the late 50's, I remember when WSM-650 and WLAC-1510 (both in Nashville, TN) were nightly visitors. WSM of course, had the Grand Ole Opry every Saturday night. And us'n and our neighbors, who lived in east Texas, would gather at our house to listen on the car radio. Do a little danc'n in the yard.

WLAC had Randy's Record Shop. This was the sale of the worst recordings you would ever want to hear. But they sold. Also on WLAC, I remember the sales of baby chicks, to be shipped to your home. I just don't remember the name of the company.

There are so many stations that were had great radio, I couldn't possibly write them all down. Kids today have no idea how great it was. I didn't intend to write an essay, but I did. Thanks for your time, and for letting me to take a trip back to the jungles of my memoirs.

No, DRM signals are already audible all over the US.  It's not legal to
transmit the stuff, but it's certainly legal to receive it, and there is
plenty of DRM shortwave stuff coming over the horizon.

KLIF became Top 40 in about 1953, right after the format popped out of KOWH
in Omaha. It continued being Top 40 through the 70's. They definitely did
play Motown, as their heyday was in the late 60's when they battled
Balaban's KBOX for supremacy in the Dallas market (which did not include Ft.
Worth at the time... KXOL was the big Top 40 there).

Why am I so far ahead of my time?  I was an early adopter of the first Rio
player
when I started doing this probably 5 years ago.   Of course, I know of
people
that have been trading reel to reel tapes of airchecks for 50 years.

It is really nice when the que tones are left in the broadcast, that way you
can
use an audio editing program to search for the que tones and delete the
commercials
and PSAs!

iPods and MP3 players are boring and are distractions from proper life.
Regards   Mike.

Julia Day
Tuesday December 14, 2004
The Guardian

The BBC has asked the government to wait another three years before deciding when to force listeners to convert to digital radio.

Although digital radio is proving a success, the UK is not yet ready to switch over, the BBC said yesterday, as it submitted its vision for the sector to the government.

The report said setting a switchover date now would be "undesirable", and would unsettle the radio market and alarm consumers.

"Despite our commitment to digital radio as the replacement technology for analogue radio, we contend that conditions, namely accessibility, affordability and take-up, are not yet in place for switchover," the corporation said.

It suggested a joint industry scheme over the next three years to plot the migration of the entire UK market to digital.

The BBC believes switchover should not take place until digital radio services match those of analogue and plans are in place to ensure no organisation is left behind. It also wants the government to support manufacturers of digital.

The corporation has already hatched a plan to allocate and manage the radio spectrum, a strategy it believes will "deliver enhancements to all tiers of digital radio provision".

It wants five blocks of the so-called band III spectrum to be shared out across the entire industry to allow all BBC and commercial services to move over to digital.
Details of the report will be shared with Ofcom and the government. It reiterates the corporation's belief that digital radio is a "robust broadcast medium capable of cheap, mass production and integration into a variety of devices".

The analogue television signal will be switched off between 2008 and 2012. The government will announce the timetable and start preparing viewers next year.

The UK has the world's most developed digital TV market, with more than 50% of 24.5m households receiving a signal through BSkyB, the BBC-backed Freeview or cable. In contrast, only 4% of households own a digital radio set.

However, the UK has between 100m and 150m analogue radios, and digital radios sets cost at least �50. Listeners would have to invest more than �1bn to reach the current level of BSkyB's household penetration alone.

WCFL Chicago, re 1970, with Dick Orken producing  "Chicken Man," "the Tooth
Fairy,"  and a boatload of great promos.
Plus the jingles.
Plus Barney Pipp, Joel Sebastian, Clark Weber, et al.

The Story of Manx Radio 1964-2004 by Derek Winterbottom, with contributions from David Callister, Terry Cringle, John Grierson, Charles Guard, Alan Jackson, Chris Musk, Bernie Quayle, Su Richardson and Stewart Watterson.

Manx Radio made its first tentative broadcasts from a caravan parked in a field near Douglas in the summer of 1964 and it was officially opened in November that year. Manx politicians hoped it would quickly develop into another 'Radio Luxembourg', a successful commercial station which would broadcast into the UK and Europe, thus bringing fame and profit to the Isle of Man. These hopes were dashed by the determined refusal of the UK to grant the necessary broadcasting licence, a stance which created serious political tension between Douglas and London for several years, increased when the Island, in revenge, gave refuge to the pirate ship 'Radio Caroline'.

Eventually, Manx Radio had to accept a lesser role as the Island's national station, running on an uncomfortable mixture of advertising revenue and government subsidy.

This, in turn, led to many conflicts and misunderstandings and when Tynwald was tempted to sell Manx Radio to the highest bidder in the 1990s a furious battle began.

By the end of its first 40 years Manx Radio had just about convinced Tynwald that it needed substantial government funding in order to provide a good public broadcasting service, but by this time its monopoly on the island was being challenged by several new radio stations.

(More details at http://www.manxradio.com/ )

Without a doubt, WJR Detroit, "From the Golden Tower of the Fisher Building, The Great Voice of the Great Lakes". I heard it nearly every day from the 1960's through the early 1970's.  It was a true full-service station, on the CBS radio network, when a radio network still meant something.  As a kid, I preferred listening to

Richard C. Hotelett's "The World Today" on WJR to watching any of the nightly news programs on TV, and Arthur Godfrey remained a staple there until 1972.

Local personalities J.P. McCarthy, Jimmy Lantz, Bud Guest, Karl Hass (now syndicated by WCLV in Cleveland, his "Adventures in Music" program is largely unchanged from those days), gave WJR's programming a variety that just doesn't exist in radio today.

WOKY, Milwaukee, way back 50 years ago.  Johnny "Mad Man" Michaels,  Luck
Logan and of course Jim "Shamus O'Hara" Lawler.

And to Jay Scott -- you're mention of Clark Weber brought back memories of
working with him at a small Wisconsin station.  He had a great sense of
humor and his success in Chicago was no surprise.

I found this posted today, Thought I would share it with the group.

-JM

I WONT BE IGNORED

I may be a 70 year old man with nothing else going on in my life but I won't be ignored by a bunch of 435er's who I know is spending the day around their radios listening to everything said. I know you think I'm being obserd with my demands for "air-time" on your repeater but I want you all to be my puppets. Watch how I pull the strings here on 435.

My new "Rules Of The Road" for the 147.435 repeater:

I play my tapes when ever I want. You don't complain, You just listen - no turning off your radio - no talking over my taped message - no walking away to take a leak - NOTHING. I don't want my tapes interrupted for any reason whenever I choose to play them you will all need to stand by. If any parts of my taped announcements are interrupted I will punish the repeater with several hours of nonstop feedback. Even if my tape player fails for what ever reason I will punish the repeater for several hours with feedback. If you interrupt the feedback I will add one hour to my feedback schedule for each interruption. If the repeater times-out during my feedback schedule I will start the feed-back schedule timer over again. I will play my tapes over-and-over until I get tiered of hearing them. If when I un-key I hear any complaining I will play them again. When I stop playing my tapes and un-key you are free to start a QSO but keep in mind that as soon as you do so I get to jam over the top of you whenever I want with rude comments about your family background or telling you to "get the fuck outta here retard". You will not go to another repeater or any simplex frequency to continue the QSO that I interrupted, If you do I will call you jammers and proceed to play my tapes over-and-over again. If you don't start any QSO's on 435 so that I can jam them I will start kerchunking the repeater until someone complains about it and then I will call you jammers and retards. If the repeater is turned off while I am playing my tapes or interrupting your QSO's I will go to the output and complain that the repeater owner is a coward and afraid of my words and then make a chicken noise like this BOK BOK while calling him a chicken and a Riley supporter. No QSO will be permitted on 435 without including me in the round-table. If no one is talking and you want to start a QSO you first talk to me asking me how I am doing and if there is anything you can do for me.

As you can tell here my 435 rules of the road pretty much favor me over you in all points of conflict. I have all of the say-so about this hobby and you have none. I don't care about how much time or money you may have invested in radio and repeater equipment, I mean business here. I may look and sound like a 70 year old senile man but I am a man on the edge. I have absolutely nothing to lose here and everything to gain. I will die sooner rather then later and I'll bet that my death will come long before the FCC and their slow bureaucracy can do anything about me. I have protected my property from possible vandals. I have protected my assets from potential legal confiscation. I signed over power of attorney to undisclosed family members to future protect me.

I am counting on you the 435 users to be my "squeaky wheel". I expect that you will get pissed off enough to daily contact authorities that will find that there is nothing more that they can do other refer to the same FCC and their slow bureaucracy.

> ## RADIO RULES:  WORLD'S BROADCASTERS JOIN ANTI-BPL CHORUS
>
> A subcommittee of an International Telecommunication Union panel of technical experts responsible for terrestrial broadcasting issues has joined a growing chorus of concerned parties about the interference potential of power line telecommunication.   According to the ARRL Letter, ITU  Radiocommunication Sector Sub Working Group 6E1 has been looking at BPL.  Now it has expressed the view that interference produced by systems employing powerline data transmission as well as by Industrial, Scientific and Medical  equipment and short-range devices, will compromise broadcast reception.  (ARRL, CGC)
>
> **
>
> ## RESCUE RADIO:  BPL VS. FIRE RADIO COMMUNICATIONS
>
> Meantime, hams who are also firefighters or have access to the local fire Department should consider enlisting their help in fighting the rollout of Broadband over Powerlines.  This, due to the heavy use of the 33 and 45 MHz radio bands by fire departments.
>
> Writing to the QRZ.com super site, Jim Walsh, K3JIM, says that some fire departments are not technically savvy and think that interference is really blind spots in the radio coverage.  Walsh, who is a firefighter and truck engineer Red Lion, Pennsylvania, says that broadband interference is not easily recognizable to fire personnel as say an interfering DX station may be to the trained ear of a ham radio operator.  He says that the fire service is used to dead spots and may not know why they exist.
>
> Walsh cites one situation in the area where he lives and works.  He says that it is well known that when in the vicinity of certain gas station convenience stores in his area that one cannot use the radio for a few hundred meters.  He says that in this case the problem is the Point of Sale system that records the gas transactions and that the lines running to the pumps are not shielded and radiate computer hash like an antenna.
>
>

> K3JIM has lots more to say about the problem BPL can be to low-band
> fire radio systems.  You can read it all on line at www.qrz.com

> THAT FINAL ITEM:  DUTCH STUDY SUGGESTS ISSUES ACCOMPANY 3G CELL STATIONS
>
>
> And finally, can cellular telephones make you more alert?  Some researchers in the Netherlands think so.  Bill Pasternak, WA6ITF, has more:
>
>
> --
> A study by Dutch researchers has found some interesting side effects from certain cellular telephone base station radiation.  Initial results show that  electromagnetic energy transmitted by base stations for the new third generation or 3 G  wireless networks caused subjects in double-blind test groups to experience tingling sensations, get headaches and have feelings of nausea.   On the other hand, when the same subjects were exposed to signals from current mobile networks, no negative impacts were found.
>
>
> But here's the kicker.  When the same people  were exposed to both types of fields -- that being 3 G plus current networks --  cognitive functions including memory and response times showed measurable improvement.  Put simply, the subjects became more alert when exposed to both fields. The report did not discuss the modulation schemes nor the specific RF power densities that were involved in the study, and

Actually, you come to a person like me. I listen to the show. I tell you how difficult it'll be and make sure you're serious and well-funded enough to go through that process.

Be prepared to prove that the local show is very popular, both in ratings and revenue and I'll lead you through the process.

Contact me at richwood@pobox.com and I'll give you my phone contact and we can talk.

Rich

Tom Betz wrote:

> Without a doubt, WJR Detroit, "From the Golden Tower of the Fisher Building, The Great Voice of the Great Lakes". I heard it nearly every day from the 1960's through the early 1970's.  It was a true full-service station, on the CBS radio network, when a radio network still meant something.  As a kid, I preferred listening to Richard C. Hotelett's "The World Today" on WJR to watching any of the nightly news programs on TV, and Arthur Godfrey remained a staple there until 1972.
>
> Local personalities J.P. McCarthy, Jimmy Lantz, Bud Guest, Karl Hass (now syndicated by WCLV in Cleveland, his "Adventures in

> Music" program is largely unchanged from those days), gave WJR's
> programming a variety that just doesn't exist in radio today.

WJR went downhill fast in the late 80s, when some manager failed to notice that you need some intelligence to host a show, and started putting on lightweights and displacing the good guys.

Simultaneously, McCarthy lost it, coinciding with a Marconi award or whatever it was, so even that attraction was lost.   The WTF moment for me was his noontime interview with the airline pilot that landed the DC-10 without hydraulic systems on throttle alone, and the pilot was building up to his crisis moment practiced in countless interviews, and J.P. intervened with the remark that he himself used to fly a Piper Cherokee, at which point the pilot lost interest in everything, saying in effect yeah whatever, and that ended that.

So J.P. stopped thinking or seeing his job or something around then, or maybe coasting, or maybe he had a stroke, who knows.  That cost WJR huge. Miss Pennypacker from the Blue Star Home supplied the only edge to his morning show at that point.

So anyway, okay, people get old, but management has to know enough to replace them with actual talent, which they don't and didn't.

I got a nice reply once from Jimmy Launce when I asked what the peaceful-moment music was he used to play once a month or so (Kiri Te Kanawa ``O mio babbino caro''), asked from a distance of more than a decade.

They moved Launce from a great show in the evening to a morning show playing ``guess what I'm holding in my hand'' to hold the attention of droolers, which in fact is their audience today, long after the good guys are gone.

I guess Clear Channel didn't help either, but they didn't start the decline.

Tom and Others:

When I was a kid growing up near London, Ontario, my dad owned a Hallicrafters SX-28A with a huge speaker cabinet and my mother used to listen to WJR regularly.  Your mention of Bud Guest was timely, as she would listen to him on a daily basis.

My personal favourite station was CKLW in Windsor.  I'd listen to that station 24 hours a day if allowed. I really began seriously listening to it during the summer of '65 when I went away to Army Cadet Camp at Ipperwash Ontario on the south shore of Lake Huron. It was one of those stations that the whole base listened to at the same time. There were certain songs that had every cadet reaching for the volume control when they came on, and the whole barracks would be shaking. One of those songs was "Satisfaction" by The Stones. Every volume control was cranked fully clockwise when it came on.

When I got into radio 2 years later, I started listening to understand the format and why the jocks did what they did. Three years after that, I joined "The Big 8" as a Transcription Operator and ran all the jingles, music, commercials, etc. for all the Big 8 Jocks. It was a real power-trip to be the one at the controls of that 50,000 watt clear channel powerhouse when it was the fifth highest rated station in North America during the spring of 1970 and we were pounding out the hits with the Drake Format under the direction of PD Paul Drew.

In my opinion, CKLW was the finest station to ever feed audio down a broadcast line to a transmitter site.

Golly I miss it!

I also listened to WLS and "Big 10 WCFL" a fair amount too, but "The Big 8" played more soul hits, and I ate that stuff up.

Regards,
Lee Smith

International electronics and systems group Thales has announced that a new world record has been reached in Macedonia for Digital AM Broadcasting. PE Makedonska Radiodifuzija (MRD), the national public broadcaster, in collaboration with Thales and Deutsche Welle (DW), succeeded in transmitting 720 kW mean power in Digital Radio Mondiale (DRM) mode from the mediumwave station Ovce Pole, the highest DRM power ever broadcast by a single transmitter, reaching exceptional coverage and quality of reception.

Transmissions were done on 810 kHz with the Thales' S7HP 1200 kW solid-state mediumwave analogue transmitter, in operation at Ovce Pole since its inauguration in June 2002. For the tests, Thales provided front-end equipment from its Skywave 2000 DRM Digital Product Line.

The necessary measurements of the signal quality and coverage area were performed by DW using their measurement van and various fixed control and measurement centers in Europe. Measurements were carried out twice a day: 3 hours during day time -groundwave propagation- and 3 hours during night time - skywave propagation- while transmitting the program of Macedonian Radio. The DW measurement van confirmed a coverage area during daylight of up to 300 km, whereas by night the DW centers recorded reception over larger areas of Western Europe. The audio quality was excellent and disturbance free.

December 15, 2004

LOS ANGELES (Reuters) - After grabbing the spotlight by signing shock jock Howard Stern and launching a palm-sized portable device, hopes are high for satellite radio companies, which are expected to show off navigational, video and recording capabilities next month.

XM Satellite Radio Holdings (Research) and rival Sirius Satellite Radio Inc. (Research) have amassed nearly 4 million subscribers collectively. Expectations for growth are high, with Sirius stock up by triple digits since it nabbed Stern and hired radio veteran Mel Karmazin as its CEO.

Rumors that Sirius and Apple Computer Inc. (Research) were going to announce next month at the Consumer Electronics Show or MacWorld a deal to bundle iPods with satellite radio have added to the sector's buzz.

Sirius and Apple declined comment on the rumors, but analysts said it seemed technologically unfeasible right now.

"I don't believe Sirius' chip set is at the point where it can go into an iPod. It's the size of a credit card, and an iPod would need a chip set the size of a thumb nail," said April Horace, a Janco Partners analyst.

That's not to say the industry is not thinking about it. After launching its wearable MyFi device in October, XM chief executive Hugh Panero said he believed one day a portable satellite player would be combined with a device like an iPod.

"We've had on-and-off conversations with people in hardware and software over the years," he said.

Sirius chairman Joseph Clayton has said over the past several months that when Sirius has its third generation chip set ready, expected by as early as late summer, it will enable Sirius to make a device similar to the MyFi.

At the consumer electronics show, XM will demonstrate products like the MyFi and its SKYFi2 plug-and-play radio, the first satellite radio with pause and replay features.
Industry sources expect Sirius to showcase new recording capabilities for existing products.

"Consumers want to take their music experience and flow with them. That's why recording capability and storage capability will be huge in the vehicle and in the home and wherever you go," said Clayton last week in New York.

Traffic navigation will also be a big topic. Sirius has just announced it will offer updated traffic data that can be integrated into car navigation systems, combining route guidance and mapping.

XM offers a traffic service with Honda Motor Co Ltd. that feeds XM's real-time traffic information into the map on a car's navigation system.

Both XM and Sirius demonstrated video capabilities last year and will do so again this year, but video via satellite radio is still evolving. XM has said it is waiting to see if there is a sound business model and demand.

In addition to more car radio announcements, PCMag.com editor Jim Lauderback expects more third party gadget makers to jump in on the satellite radio bandwagon.
"We'll see consumer electronics vendors like Pioneer and Sanyo showing more satellite products as they become more popular and less expensive," he said.

Meanwhile, traditional broadcasters Clear Channel Communications Inc. (Research) and Cox Radio Inc. (Research) are expected to unveil accelerated plans to roll out digital AM/FM radio.

By The Associated Press
12.16.04

WASHINGTON - The Federal Communications Commission rejected a request yesterday to begin imposing indecency standards on satellite radio, where frequent agency target Howard Stern is taking his show.

The FCC's media bureau turned aside a radio station owner's request that broadcast indecency regulations apply to subscription satellite services.

Saul Levine, who owns three radio stations in California, asked the commission in October to modify its satellite radio rules to include an indecency provision similar to the one that governs broadcast stations using public airwaves.

In a letter to the FCC, Levine complained that the commission needed to create a "level playing field" in protecting the public interest. "Indecent programming has been and continues to be an ongoing problem - as clearly evidenced by the number of monetary sanctions over the past few years," he wrote.

The agency, in a letter from media bureau chief Kenneth Ferree, declined Levine's request.

"The commission has previously ruled that subscription-based services do not call into play the issue of indecency," Ferree wrote.

Levine, who is president of Mt. Wilson FM Broadcasters Inc. in Los Angeles, says the dismissal amounted to a double standard by the FCC.

"The commission is saying it's fine to have obscenity any time of the day or night on satellite radio even though satellite radio is being made available to people without subscriptions," such as in rental cars that come with free service, Levine said in a telephone interview.

Stern, who has repeatedly railed against the "censorship" of the FCC, has been involved in the two biggest radio fines imposed by the agency. That includes a record $1.75 million settlement reached over the summer.

In October, he announced his move to satellite radio and said "the FCC ... has stopped me from doing business." He debuts in January 2006 on Sirius Satellite Radio.

Radio Prague may carry its programmes in English and German on longwave in the future. In answer to a listener's question on Sunday's Mailbox programme, Radio Prague Director Miroslav Krupicka said: "It is not reality at this moment but we are considering going on longwave in English and German. It's a longwave that is used by a domestic channel of Czech Radio, Czech Radio 1 - Radiozurnal, which broadcasts on the FM network and on longwave [270 kHz, 750 kW]. We are in talks with this station to give us a certain space on longwave in order for us to be heard beyond the border of the Czech Republic in, say, Germany, Austria and Poland because longwave travels further than medium wave, for instance, or FM, so we would be heard in Central and Eastern Europe on longwave quite well. Of course, this is an addition to shortwave broadcasting. We are always on shortwave, we will stay on shortwave, but in addition we are looking for tools in order to be heard both in the Czech Republic and in Central Europe. In the Czech Republic we are currently on FM in Prague in English, this is a service for tourists, people visiting the Czech Republic, businessmen and so on. It's quite appreciated by the audience from what I have heard. And to expand on longwave would be quite nice, so we are working on it, but it is not yet reality."

16/12/2004

The Broadcasting Commission of Ireland has said it intends to licence more radio and television stations and crack down on stations that fail to abide by licence conditions.

The plans are among 11 goals set out in the commission's strategic plan for the coming four years.

The BCI also said it wanted to promote plurality of ownership.

-- Use this CD-ROM to find shortwave broadcast stations worldwide, plus utility stations from 0 to 30 MHz!

Broadcast database: 9,336 entries with the latest schedules of clandestine, domestic and international broadcasting services on shortwave. Compiled by top experts in this field with the assistance of more than 100 experienced collaborators and monitors worldwide.

Utility database (Red Cross, United Nations and more): 10,092 special frequencies from the international bestseller "2005/2006 Guide to Utility Radio Stations." Plus 930 abbreviations and 20,224 formerly active frequencies, all on one CD-ROM. Browse through all that data in milliseconds, and search in next to no time -- even combined! -- for specific frequencies, countries, stations, languages, call signs, and times as well. It can't get faster than this! Includes the superb digital data decoding shareware program RadioRaft by French radio amateur F6FLT, and 321 new WAVECOM digital data decoder screenshots in original format with full colors. This product is based on 36 years of experience in the radio monitoring and publishing field!

Easily connects to leading receiver control programs: controlling your equipment by means of this frequency database is now only a mouse-click away! A powerful concurrent full text word search is included, too.

Great for the international radio listener, a businessperson or a tourist traveling worldwide, a professional monitoring service, or a circumnavigator sailing around the globe: This is the way -- just a few keystrokes and you have it all!

CD-ROM for PCs. Runs under Windows 3.1/95/98/2000/ME/NT/XP. � 2004 by Klingenfuss Publications, Germany. #9528 -- $29.95

Dear All,

we kindly would like to inform you about the schedule of Pan American Broadcasting using shortwave transmitters of T-Systems in Germany:

Target Middle East:
Saturdays, 1400 to 1430 UTC, 13820 kHz, program name "Sedayeh Mohebat - World Radio"
Saturdays, 1445 to 1500 UTC, 13820 kHz, program name "David�s Mighty Men Evangelism Team"

Sundays, 1500 to 1515 UTC, 13820 kHz, program name "Waymarks"
Sundays, 1530 to 1545 UTC, 13820 kHz, program name "Victory thru Truth" starting 02. January 2005
Sundays, 1545 to 1600 UTC, 13820 kHz, program name "God Speaks Today"
Sundays, 1600 to 1630 UTC, 13820 kHz, program name "Bible Says"

Target India:
Sundays, 0030 to 0045 UTC, 5945 kHz, program name "Bold Bible Living"
Sundays, 1430 to 1445 UTC, 13820 kHz, program name "Banner of Truth" starting 02. January 2005

Target Moskau, Russia:
Wednesdays, 1630 to 1645 UTC, 6015 kHz, program name "A Brighter Day Ministries" starting 05. January 2005

Please feel free to forward this schedule to anyone and DX Clubs whom you like.

Any reception report would be highly appreciated. Feel free to send it directly to PAB under:
cjung@panambc.com
and under CC to ralf.weyl@t-systems.com

Warm wishes for Christmas and a Happy New Year,

Best regards from Juelich

If I had to narrow it down to one station, I'd have to say WLS/Chicago during the 1960s.  Like most teenagers in mid-America I tuned in every night because they had the Top 40 hits days before my local stations; but as much as I enjoyed the music, I loved the disc jockeys even more!  Those were the days of "personality" deejays who understood how to entertain the audience between records, but without forgetting that the music itself was the reason they were there.  Dick Biondi, Ron Riley, Art Roberts, Clark Weber -- these were the heroes of my youth, and instrumental in my getting into radio myself.

I suppose if I had grown up a little closer to New York I'd have felt the same way about the WABC Good Guys -- but WABC just didn't get into West Tennessee all that well, while WLS boomed in.

For sale:

(The "Radio Crazy" is baaaaaakkkk!) Hi!

Partial interest in AM daytimer in small Alabama city of about 11,000 population. Total asking price of the station is $70,000 with $10,000 down, seller financing. No real estate is included. Studio rent is $360.00 a month and tower site rent is $200.00 a month. Station is on the air since 1974. 1,000 watts, non-directional, daytime only.

Transmitter is an all solid state Harris GATES ONE.

I need one investor with the $10,000 down. For this (besides my everlasting gratitude)I will gladly award you 25 percent ownership and a seat on the board with full voting rights. (A Corporation will be formed, silly!)

I am former Chief Engineer for a NYC AM station and was the past President and founder of an FM in San Francisco which is on the air since 1973.

My tel. in Macon, GA is: (478)741-1710. Please feel free to call anytime. Don't mask the caller ID please, the system will reject the call. If you are paranoid, email me instead. wrecktech@yahoo.com

73,

Meyer Gottesman, W6GIV

That's the story now, but who knows how that will change in the future. I certainly hope that they stay away from it but. You gotta wonder how much the radio shows are actually going to change.

Mecia Hack <@NOT.yahoo.com> had written:
|
| >>>"What AM Station do you miss the most?

My top two candidates:

WLS from the early 1970s through the mid 1980s -- always creative,
always just a little bit out of the box, always listenable.

KRBE(AM) Houston when it was "Classic Rock 1070" in 1985-86.
Imagine a station that would play the Thirteenth Floor Elevators.
In C-QUAM stereo, indeed.

========

But that's AM. The FM stations I miss most are the Entercom-era
KITS/Live 105 in San Francisco (until about 1997?) and the
"Rock 40" KXXR in Kansas City (1989-90). Both stations were
willing to bend the playlist and absolutely did not take themselves
too seriously, with personalities who had just enough of a sarcastic
edge to them. Both KITS and KXXR were both fun stations to listen to.

The current KITS is a pale shadow of what it used to be.

Sirius does have Kids Stuff on channel 11.  If you can handle listening
to Barney and the like I suppose it's good stuff.

I have had a few friends that have listened to both Sirius and XM and
can't hear any difference. If you are a baseball fan, then XM is the
way to go.

Bruce

When a friend and I were 14, we built a little 100mw station for our town. There was no station in the entire county, it was like Mayberry. We went to a station in a neighboring town with his brand-new cassette recorder ($100). We stuck it in the insulated closet where they had the newswire and let the sucker run for around 20 or 30 minutes.

Then, when we went on the air of our 100mw station, reading the news from the local paper, we played our "newswire" in the background. Sounded pretty real if you ask me.

```

BBC Radio today announced that a trial of an MP3 downloading service, which saw 70,000 downloads of Radio 4's In Our Time programme in November, had been a massive success.

Episodes of the Melvyn Bragg-fronted discussion show, which looks at the history of ideas ranging from the theory of thermodynamics to Goethe's drama Faust, were made available to download in full in MP3 format for seven days after the broadcast date.

This "podcasting" service allowed the shows to be saved to a computer or a personal player such as an iPod, enabling the user to listen to the show even if they are not logged on to the BBC Radio website.

Using download applications such as iPodder, In Our Time could be "tagged" and automatically downloaded as soon as the latest edition of the show was made available online.

At present BBC radio shows can be listened to live over the net, or "on demand" after the date of original broadcast, with the user required to be logged on to the relevant BBC Radio site.

Simon Nelson, controller of BBC Radio and Music Interactive, said: "We've been surprised and delighted by the demand for downloads of what is one of our most challenging programmes.

"It demonstrates the public's appetite for new ways of listening.

"Of course we recognise that we can't offer all programmes in this way but we look forward to working with rights holders to explore ways we could learn from developments like this to drive radio listening forward."

This is the second of the BBC's radio download trials, with Nobel prize-winning poet and playwright Wole Soyinka's 2004 Reith Lecture series on the Climate of Fear on Radio 4 receiving 50,000 downloads in April and May this year.

BBC Radio's online services have received a boost recently with the news that Radio 4's production of sci-fi comedy Hitchhiker's Guide to the Galaxy has had over 1 million on demand listens, and that an unprecedented 6.2 million users visited BBC Radio websites last month - an increase of 55% on the November 2003 figure.

Forty-eight per cent of visitors to BBC Radio sites also made use of online listening services, with Chris Moyle's Radio 1 breakfast show overtaking The Archers as the most popular on demand BBC show, the self-styled saviour of Radio 1 getting 395,000 listens in November.

Well, I really couldn't find what I wanted so I started one myself. I have enough LPs to paper a multiple-story building. Now, I can play them and other folks can enjoy the music too. I hope this shameless self-promotion here is OK. I have been reading this group but rarely post.

http://ct1.fast-serv.com:8314/listen.pls

Beautiful Music Radio - AirstreamFM is a format that used to be called "Easy Listening Music" or "Beautiful Music." You will hear mostly instrumentals, tons of strings, flute and oboe solos and piano...just my style of that Great American Invention...ELEVATOR MUSIC!!

This is the SECOND PHASE of our Test Broadcast...

For this second phase, we have increased the quality of our stream to 128K for CD-quality sound. Most "broad-band" users will have no problem with this stream.

The Beautiful Music Radio -AirstreamFM playlist has around FIVE-THOUSAND SONGS and growing. The majority of our music is from the TWO THOUSAND "LPs" we have in our collection. However, for this TEST BROADCAST, we began with 1700 songs and have increased that to just over 2600 Beautiful Music tracks.

The STREAM -->  http://ct1.fast-serv.com:8314/listen.pls

I think domain names are cheap and so are web pages.  It doesn't take
spending much money to give your operation a more professional look.
When someone uses a long URL or free web page:
1)  The page itself is annoying, with pop-ups and banners everywhere.
2)  It tells me that the "owner" is not that serious about his image.

Consider your domain and web page image!

"Music-Ray-Dee-Oh, Double-Ell-Ess, Chi-Caaaago!"

WLS, late 70s/early 80s.

Though I grew up in Minneapolis, this station was my savior in the late 70s after we lost local Top 40 outlets WYOO, WDGY, and KSTP.

John Landecker "Records truly is my middle name) from 6-10, then Jeff Davis from 10-2.

Always looked forward to winter because it would get dark early enough so I could hear John's complete show & catch a bit of Lujack in the morning before school.

** LUXEMBOURG. Re: Telefunken transmitter deliveries --- This morning
I intercepted RTL 1440 with a 2 kHz tone at 0200. At 0205 the signal
switched to digital and this went on until 0220, when there was a 5
minute break, apparently without carrier, before the digital signal
continued. No RTL ID, but who else could it be? So it seems the new
TRAM transmitter is already in place and testing. The worst situation
now would be if the owners decide to fill hitherto unused night hours
with DRM (Olle Alm, Sweden, Dec 18, DX LISTENING DIGEST)

"At the moment, digital pips are late" by varying delay times depending on particular equipment used. The pips are of no practical use on digital radio.

The Associated Press
Sunday, December 19, 2004

A small plane crashed this morning into a radio station tower in La Mirada, killing two people aboard and temporarily knocking the station off the air, officials said.

The single-engine Cessna plane struck the KFI Radio tower about 9:49 a.m. and the tower tumbled to the ground, said Andrea Hawkins, a dispatch supervisor with the Los Angeles County Fire Department. Television footage showed the 900-foot tall red-and-white tower in pieces on the ground surrounded by plane wreckage.

A man and woman were pronounced dead, Hawkins said. A small fire also was extinguished.

KFI, a talk and news station, was off the air for about an hour following the accident, said Leslie Lotto, an editor at the station.

A telephone call to the Federal Aviation Administration was not immediately returned.

Nationally,  WLS and WCFL were tops in my book.  The 70's radio war between these two giants was awesome.

Later, I came to enjoy the "folksy-ness" of WOWO and Joe Donovan's Rock & Roll Revival (probably the first onscure oldies show anywhere) overnights on 84 WHAS.

Locally, I miss Charleston, West Virginia's 95 WKAZ.  Big time Top 40 radio in a smaller market.  Their crosstown battle with 1490 WXIT was simply a local version of the WLS/WCFL duel, with both stations raising the bar in the market and creating some really great radio.

Rick

Further details of the massive job cuts at the BBC were unveiled on Friday.

They come after last week's announcement by director-general Mark Thompson that 1,900 posts would be axed from support services and the factual and learning department.

It was revealed most of the first wave of support cuts will come from BBC People - the human resources division.

Half of its personnel staff will go - 550 out of 1,100. But 350 of those will be outsourced.

More than 540 jobs will go in finance and property, which has a workforce of

1,100. Out of 500 marketing jobs, 119 will be ditched.

In policy and legal, 60 out of 120 jobs are to be culled. And in strategy and distribution, 20 jobs have been earmarked out of a total 60 staff.

About 65 posts will go from learning, 112 from specialist factual and 230 from documentaries.

Individual staff, however, still have to wait until after Christmas to find out if they are to lose their jobs.

For sale:

(The "Radio Crazy" is baaaaaakkk!) This time it is a TV deal! Hi!

Partial interest in LPTV. Famous east coast beach resort city. Channel 59, 20 KW ERP, directional. Grade "A" signal over entire city of license and then some!

This is a construction permit (CP)only. The asking price is only $7,000.

Active or inactive investors wanted. All investors
would be on the board with full voting rights if
desired.

There is an element of risk and you could lose all or
part of your investment. This is a joint venture.

Tel: (478)741-1710 in Macon, GA.

I am NOT a broker, shill, agent, owner or part owner
of this CP.

Do not mask your caller ID. The call will not go thru.
If you insist on being paranoid, please email.

73,

Meyer Gottesman, W6GIV

MEDINA???

I can't believe it.  I just started reading this group again after being too busy for many months.

I also was raised in west Tennessee, Crockett County.  I was a musician as a teen and enjoyed late-night driving in west Tennessee after a gig.  On clear nights, I would listen to this great station from Cincinnati, I think it was WLW.  All easy-listening (AM) and no announcements regarding the music, just a station ID and an occasional spot.  But for AM, WLW was VERY laid back in the late 1960s/early 1970s.  The other station I enjoyed was WWL from the beautiful Blue Room, high atop the Roosevelt Hotel in downtown New Orleans.  Similar music format.  Great signal to west Tennessee.

There was "Music 'Till Midnight" on WREC AM60 in Memphis.  What a great show.  The founder of the station, Hoyt B. Wooten, tried to give WREC the finest sound technology would provide.  He was famous for his underground bomb-shelter, so large that he used to throw parties there.  And WREC had a fabulous "sound" compared to other AM stations.

Then...there was Dolly Holiday and "Holiday Inn's Nighttime"  The first "rock" FM station in Memphis, FM-100 WMC would play the Beatles's "Good Night" at midnight, then ole Dolly Holiday would come on for the next 5 hours or so, playing Jackie Gleason, Bobby Hacket, Mancinni and all of the other slurpy, mushy music that I really loved. In the early 1970s, I did a few "live shows" with her for some group at the main Holiday Inn on Lamar in Memphis. One day, we went back to her office, down the hall in one of the buildings of the Holiday Inn headquarters. Before I knew where we were going, I looked up through the double glass windows of a "radio studio." It was her studio where she recorded the program. Looking back now, I kick myself for not nurturing that relationship, bringing a camera and taking some good photos.

That was back in the day that 7/11 stores opened at 7am and closed at 11pm.

<Thinking out loud>

Gosh, I wonder where her record library is now? As far as that goes, I wonder where the WKBJ-FM record library is now???

</Thinking out loud>

I used to work at WKBJ-FM in Milan, easy listening from those wonderful LPs. AM played country-music with too many cheap commercials and sounded terrible!!! FM was "easy listening" and played only 1 or 2 spots per hour. This was in 1969, before they automated in 1970.

Just a few weeks ago, I began experimenting with my own BEAUIFUL MUSIC Internet Radio station. Give it a listen.

http://ct1.fast-serv.com:8314/listen.pls

I have over 1000 LPs of just the easy-listening/beautiful-music genre. It takes a while to record them into the computer, in real time. But the music can't be beat. I am working on this project a little at a time.

I have been in Dallas for 22-years and have seen a few changes even here. Occasionally (which is not very often) I will be away from the city at night, away from the interference and the thick, overloaded local AM band. Usually, that is on one of my trips back to Tennessee. I still try to tune in those good old stations. But radio is not what it used to be. I can never find an AM station, playing that type of music at night. So I listen to tape-delays of the talk-guys, still not too bad. But...even with digital, stereo satellite broadcasting static-free entertainment directly from the sky to your car radio, nothing will be quite the same as a summer-night's ride on the dark, rural highways, with the full-moon shining and music coming from far, far away, from WLW or WWL with their easy listening, or even the great jocks at WLS in Chicago.

Duke, Duke, Duke, Duke of Earl, Duke, Duke, Duke of Earl, Duke, Duke, Duke of Earl, Duke Duke...well you get the idea.

Check out Beautiful Music Radio, built by a Tennessean and enjoyed by
the world!

I'd guess that they're retained mainly because they are a useful
signal that the news is coming up. Now that MSF and
DCF-controlled clocks are in the shops at less than a tenner, the
GTS has lost its unique value.

Hi Folks,

First of all: should this be the wrong group for posting such a
question, please inform me...

I am currently searching for the best way to process telephone calls
for on air use. The calls are recorded through a good hybrid, go
through a DBX comp/gate and end up in Adobe Audition. I never use
complete calls, only 30-sec quotes are used. Right now, I have a decent
setup, and the calls are processed through an Audition script. The
script does EQ and dynamics (compression/limiting).The hard/software
setup can't change. But I'm looking for the best way to process the
quotes, for optimum clearness and loudness on air. What are the steps I
should take?

Thank you for your suggestions!

DiPool

I listened to them back then too ... well, maybe a couple of years
earlier, since I enlisted in the Army in 1968.  Don't remember a lot about
WLW, but I'll never forget those "King Edward cigar-time" timechecks on
WWL.  I listened more to WKYC (now WTAM) in Cleveland ... and WLS, as I
mentioned earlier.

Like so many AM stations today, WREC is a Clear Channel-owned talker.

> Then...there was Dolly Holiday and "Holiday Inn's Nighttime" The first "rock" FM station in Memphis, FM-100 WMC would play the Beatles's "Good Night" at midnight, then ole Dolly Holiday would come on for the next 5 hours or so, playing Jackie Gleason, Bobby Hacket, Mancinni and all of the other slurpy, mushy music that I really loved. Looking back now, I kick myself for not nurturing that relationship, bringing a camera and taking some good photos.

I had forgotten that FM100 aired Dolly Holiday's program! Following a progressive-rock format with "Holiday Inn's Nighttime" always seemed a bit strange, but somehow the people at FM100 kept the transition from being too jarring. Sadly, the riverboat-whistle ID hasn't been heard on that station in a long time. Scripps-Howard sold the WMC-AM/FM/TV operation a number of years ago; Infinity owns the two radios, and I think Raycom still owns WMC-TV5. (All three still carry the WMC call letters.)

> Gosh, I wonder where her record library is now? As far as that goes, I wonder where the WKBJ-FM record library is now???

I think Bill Haney and (the late) Larry Dunphy divided it between them. Wish I had been around to ask for Nancy Sinatra's "Sugar" album -- that album cover, with Nancy wearing the pink bikini, used to sit in the control room window when I was working FM. (Hey, I was just a teenager ... and Nancy Sinatra was wearing that pink bikini .... )

> I used to work at WKBJ-FM in Milan, easy listening from those wonderful LPs. AM played country-music with too many cheap commercials and sounded terrible!!! FM was "easy listening" and played only 1 or 2 spots per hour. This was in 1969, before they automated in 1970.

You had commercials? I was there in 1968, and we almost never had commercials on the FM side; just three breaks an hour for weather and one at the top for news. AM paid the FM's expenses most of the year, but FM made money each fall and winter with Milan High School football and basketball broadcasts.

Today the old WKBJ-FM is all grown up. Changed owners in 1983; callsign changed to WYNU in 1984; went from an ERP of 28,500 watts at 160 ft. HAAT to the full 100kw at 1,050 ft. Current owner is Clear Channel, and it's playing classic rock. The AM is dark, sadly.

```

Very easy.  KYA 1260.  They had the best jocks, promos and music (for the most part.  Even they fell into the Beatles-Beach Boys-Supremes trap when it came to oldies) during the 60's and 70's.  KFRC was the copy-cat around here.  Some people think the opposite is true but Bill Drake programmed KYA long before he consulted the RKO stations.

The death knell happened on November 1, 1977 when King Broadcasting took over and ruined it.  They even killed-off its sister station KYA-FM (Y-93).  When they sold KYA-AM, the new owners even junked the call letters.  I wouldn't drop a three-letter call for anything. Had I ever thought KYA would fall by the wayside, I would have taped hours of it.

```

I have some very fond memories of listening to Jack on KMOX 1120 in St. Louis  on Saturday Mornings when I was a teenager.

He was like a friend on the radio, just chatting with you, casually mentioning the products he was tasked with advertising, weaving them right into the fabric of his show like he was your pal and he'd just tried a box of those DeBrand's candies and boy, I should really try them, they're so good ... and playing a lot of old radio comedy.

When you're a kid, you think the world will go on that way forever -- but not so. His untimely death in 1984 was a sad blow to me even though I was away at college and pretty much out of KMOX's realistic reception area.

It's Christmastime again, and that always gets me to thinking of some of the great Christmas comedy routines he'd play on his three hour show, usually for the last two saturdays before Christmas. I loved all of his shows, don't get me wrong. Anyway, I was just thinking wouldn't it be great if I had saved just one of those tapes of his shows from when I was a kid?
And then it occured to me -- what if somebody else had?

Know of any?

[Originally posted to the WSJ w/copies to here and ba.broadcast, the latter of two which, failed to make it,....?]

To: morning@wsj.com

I'd ask if they had chimpanzees running the station at KNEW, Talk 910, San Francisco, but that would be an uncalled for slur on the chimps who can walk and chew gum at the same time.

I was out working out this morning and tried to listen to your program [Morning at the WSJ] but what I got, again [happens VERY frequently] was

several channels being played on top of one another. This is when asleep-at-the-wheel on the part of the station is: 1.) listener abuse; 2.) client abuse; and, 3.) customer abuse. It's a How-To "Dis" everyone,

all at once, at the same spot on the dial.

Ah, but this morning's programming run amuck, was a classic: they ran commercials paired with inappropriate sound checks for "Bill Bennett's Morning In America" program [that had already run] in front of you, then

laid down a layer of John Phillips Souza's rendition of Stars and Stripes Forever. Sort of reminded of Jagger's, "Out of Control" -- only he looks MUCH better at it.

You need another outlet for your programming here.

You're not too hot yourselves in refusing to post program summaries in the face of repeated requests let alone stream audio of your shows post airing.

Not to worry. Santa's going to bring an iPod so I'll be able to carry along better, reliable programming.

cc: ba.broadcast

Actually, the AM is back, kinda.  It's moved to Lakeland (a Memphis
suburb) and resurfaced as religious station WMQM with 50,000 watts
daytime, 35 at night.  Most winter days I can hear it here in Cheatham
Co. all day long.

There is a program called SDP that stores streaming microsoft media to disk, I want to know if saving permanently of legitimate streaming internet radio stations is legal or not.  I know there is a law for vcr recording of TV stations that say it is legal to record tv shows, but not for "archival" purposes, which I interpret to mean that the recording can not stay permanent. Does internet radio follow the same rules?  Thanks.

Dear Thierry,

>DRM tests are also reported since more than one year also on LW 216 kHz,
>specially during week-end nights

I'm hearing lots of stories about the availability of AM licences in France.

What is happening over there are do you by any chance have aq list of the licences with city and EMRP levels?

Are these licences put up for auction or is it a case that any group can apply to your authority's?

Regards

Wednesday, December 22, 2004

Washington (CNN) -- An unauthorized radio station in the nation's capital called for "massive protests" in the week leading up to the January 20 presidential inauguration.
The station broadcast Wednesday at 1680 AM and identified itself as "Guerrilla Radio, WSQT."

During the identification message, an announcer said, "WSQT is a project of urban activists in the D.C. area working on housing issues, homeless issues, issues of war, issues of occupation both at home and abroad, and issues of the environment that we all have to live in."

After being tipped by a reporter, an official with the Federal Communications Commission said enforcement investigators will try to pinpoint the transmitter using direction-finding equipment.

Other programming featured rap music with urgent, unsettled lyrics that were generally shouted instead of sung. The station's poor audio quality made the vocalizations nearly unintelligible.

An unidentified announcer said, "It's time to say no to Bush and no to a ban on abortions."

The announcer also called on the Supreme Court justices to "get off your butts" and free people unfairly imprisoned on drug convictions, and further stated that "we know you can hear our signal up there, and all you people in Congress."

There is no authorized radio outlet in the Washington area on the frequency used by the protesters, federal records show.

CNN monitored the signal on a conventional car radio as far away as the Maryland suburbs, about 10 miles from downtown Washington.
An FCC monitoring station is within reception range of the signal, the agency official said.

There was no immediate response from the station to an e-mail requesting an interview. The e-mail was sent to an address mentioned in the broadcast.

A number of anti-Bush groups have planned protests around Inauguration Day. Organized events range from demonstrators turning their backs on President Bush to war protests.

The anti-war, anti-racism group known as ANSWER has announced a demonstration along Pennsylvania Avenue as the president travels from the U.S. Capitol to the White House.

A statement at www.ANSWERcoalition.org calls for participants to claim spots by 9 a.m.

Another group has urged demonstrators to come to the official public ceremonies and then, at a set time, to turn their backs collectively on the president. The group is organizing on the Web at www.TurnYourBackOnBush.org.

A third group, www.ReDefeatBush.com, seeks to focus attention on perceived voting irregularities in the November election.

(CNN's Paul Courson contributed to this report.)

****Calling All Songwriters****

I really really want you to check out my new DIY community radio station in the making at http://www.instatone.com considering you are a songwriter and probably know tons of awesome songwriters to forward this too??

Invite only because we are testing:
LOGIN:
u/n alpha
p/w t3st3r

What It Is

-----------------

Instatone is our commercial-free membership-driven DIY Internet radio built by musicians for musicians. We strive to introduce the cool kids on the block to great new original better bands while building out a much higher quality music community and radio station in the process. We've created a 100% democratic way to generate a song's rotation in the radio's mix. In the land of Instatone, all Instatone members are the DJ-Collective.

you gots to be a member to upload and rate but alas, it is free, free, free to you who is not too cool to be the fool. Can you sing better than Calvin Johnson? Do you spend hours in the closet with a microphone and a can of beer? Then sign up today!

To register click "login", then "register"
Go to your email and confirm your account.
Then update your profile w/ a high school pic and nerdy bio then upload away - hey, make sure it's all your own creative stuff and nobody else's (if you're in a band that is cool so long as they're cool with that, yo) upload as much as you want - no sellout crap allowed!

we'll start broadcasting once we get lots and lots and lots of never-before-heard dirty gritty brilliant edgy uploaded ORIGINAL SONGS so you can actually listen to the radio station commercial-free with very few repeats (right now we have NO MUSIC!), see your song ratings and rankings by other totally shy hipsta wannabes and let us know what you love and hate about the site- a feedback form is on everypage.

How it Works

-------------------

Think of Instatone as the world's greatest online talent show. The system is all real-time, meaning unlike other radio stations you will never know what gets played next; that's because Instatone is based on a realtime "rate-and-rank" system fully utilizing the power of the Internet and the latest "database technologies."

You will be given an unlimited amount of original song uploads (MP3s) for free. These songs will be hosted on our radio streaming server. Unlike all other internet radio stations we have seen, ALL SONGS must be your own. And unlike other 'unsigned bands'type radio stations, all you have to do is upload and your song is guaranteed to play on our radio. You don't have to mail it in. That removes any bias, except a collective bias, out of the music choosing process. If your song is on a c.d. and you have no idea how to turn it into MP3s, get a friend to help you or email me. But I recommend downloading ITUNES onto your computer right now, since when the radio is up you will want to tune in.

At that point (once we have music) you can start rating the music on Instatone and "instantaneously" influence the destiny of the playlist. Just click on the stars to rate. Since it will be a small group of you with the guts to play with this insane system most of the music playing will be your own (and no, you can't rate yourself) and a handful of others indie daredevils. As the site grows and evolves only your most popular songs will be played with any amount of noticeable frequency, and sorry, your least popular songs (not necessarily your personal favorites) will have a much less likelihood of being played until they fall off the instatone charts altogether.

That's it!

REPORT ALL BUGS!!

-----------------------------

Kindly use the feedback form on the right side of every screen to report bugs and send messages to the developer company. Do not send comments or suggestions to my personal email address as it will NOT be logged into our system. We will review all correctly submitted feedback and will fix the bug / consider your suggestion.

I don't know why the recording of any media, including streaming media,
should be illegal, provided that it is for your own personal use. However,
selling it or distributing it to others may violate copyright laws.

If I were an employer, the last place I'd consider a fertile place to find talent would be in an internet newsgroup.  I'd suggest getting an agent if you're that

good.

For sale:

(The "Radio Crazy" is baaaaakkkk!!!)Hi!

Partial interest in 1 KW AM daytimer in small Alabama city. Total asking price is only $70,000 on terms with $10,000 down. Seller financing. There is NO real estate included.

Station is on the air since 1974. Only competition is one other AM station which is 1 KW days and reduced power at night. Both stations are non-directional.

This is a joint venture. There is an element of risk and you could lose all or part of your investment.

Active or inactive investors with at least $5,000 each are welcome. No individual may own more than 49 percent. This applies to me too! All investors would be on the board with full voting rights.

Tel: (478)741-1710 in Macon, GA.

Merry Christmas.

73,

Meyer Gottesman, W6GIV

BBC TO AIR BEATLES CHRISTMAS RADIO SPECIAL

## DECEMBER 27th SHOW FEATURES LEGENDARY FAN CLUB DISCS
## PROGRAM WILL AIR ON BBC RADIO & INTERNET

On Monday December 27, Britain's BBC Radio 2 network will broadcast a two-hour radio special centered on the seven Beatles Christmas records produced exclusively for their fan club members between 1963-1969. The program is structured as a documentary about the legendary recordings.

The show airs in the UK 5pm-7pm GMT on BBC's Radio 2 network. It should also be possible to hear the show over the internet on BBC's website. Air time in the US: Eastern time: 12 noon - 2pm EST, Pacific time: 9am - 11am PST.

http://www.bbc.co.uk/radio2/r2music/documentaries/beatles/

The original recordings were distributed to British Beatles fan club members by mail on flimsy plastic 7" 45-rpm "flexi-discs" in distinctive paper covers. The discs naturally had a very low audio fidelity. American Beatles fan club members (who of course were a year behind the Brits) missed out on the 1963 Christmas recording and received annual recordings from 1964-1969. For the first few years they were pressed onto plastic-coated postcards - which was the standard US format for novelty-style recordings. For the last couple of years they were distributed on the UK-style "flexi-disc."

Given that none of the Beatles' Christmas material (save the song "Christmas Time Is Here Again" from the 1967 fan club disc) has ever been commercially released - and the fact that the material will be aired on the very copyright-conscious BBC - it is virtually certain that special permission has been obtained from Apple to allow the broadcast of extracts from the flexi-discs.

(Though US Beatles radio shows bend the rules and frequently play clips from these discs during the holiday season - to be strictly accurate - they are NOT legally available for broadcast. The government-licensed BBC would not risk copyright claims from Apple by playing unsanctioned material.)

The radio special brings up the issue of whether the Christmas recordings might ever be released commercially in the future. There was actually once a legally-issued, limited-edition private release album that presented all seven recordings. It was created by the Official Beatles Fan Club (for whom all the original recordings were made.) It pressed up a 12" vinyl album called "The Beatles Christmas Album" in

1970 - which was made available to existing (and new) fan club members in the UK and USA that Christmas. The price was nominal - but the purchase had to be in conjunction with payment of the fan club subscription for the upcoming year.

Bear in mind that the Beatles had very publicly split up in the April of that year - so there was certainly not going to be any new Beatles Christmas recording for fan club members that December! Nor one might imagine - was there a strong motive for the UK and US fan clubs to be renewing memberships - let alone recruiting new members. Fan clubs in those days were about active artists - not disbanded groups.

In any event - that 1970 release while technically legal - was certainly not a full commercial release in retail outlets.

The only official release to date of any material from the original seven recordings is a full-length version of the song "Christmas Time Is Here Again" - heard several times in truncated form on the 1967 fan club record - which was included as track 4 of the "Free As A Bird" CD single released in November 1995.

There has been speculation before from fans about a commercial CD release of all the recordings - but there has never been official word about plans to release the material.

There are currently many audio and video projects that would seem to be of greater priority - not least the re-mastering of the entire official Beatles audio catalogue on CD. Plus the possible first CD release of the album "Live At The Hollywood Bowl." And DVD projects ranging from "Help!" "Magical Mystery Tour," "Let It Be," and "Shea Stadium" to a collation of all the TV promotional films.

On the other hand - as one very respected senior Beatles insider has privately told his friends - the recent, very controversial release of the "Capitol Albums" box-set of the 1964 Americanized, duophonic, artificially echo-enhanced recordings (which has caused great dismay among Beatles purists) indicates that the motivation for releasing Beatles product is now primarily driven by the profit motive rather than by choices that honor the Beatles' artistic heritage.

However - if an album is ever released of these seven Christmas fan club recordings - at least there will be no controversy about which versions to release. Unlike the Capitol versions of the Beatles British catalogue - which were sonically altered, sliced and diced by corporate "suits" in America to accommodate what they presumed were American tastes - the US fan club never presumed to tamper with the Beatles' artistic choices. So the only versions that exist to be released are the original British recordings as approved by the Beatles. And for that true Beatles fans can be grateful.

The radio show has been produced by "Ten Alps" - an independent TV/radio production company recently set-up by Band-Aid/Live-Aid creator Sir Bob Geldof. The show description from the production company's website reads:

A Beatles Christmas - BBC Radio 2

A Beatles Christmas highlights a fascinating slice of the Beatles legacy and features rare material, focussing on the traditional Christmas records which were sent out exclusively to Beatles fan club members from 1963-1969. These recordings not only featured Christmas songs by the Beatles, but also include entertaining ad-libs and pantomime banter between all 4 Beatles, which provide a fascinating insight into how their lives changed dramatically between '63 & '69.
Kenny Everett produced and featured in the Beatles Christmas records in
1968 & 1969. Zak - Ringo's son, designed the cover of the 1969 record.
The 1966 record, with a cover designed by Julian Lennon, was called Pantomime and featured a toast to the Queen. These records were a Christmas tradition for thousands of Beatles fans around the world.

http://www.wholewheatradio.org

Whole Wheat Radio is an unpretentious, interactive, independent music world community.  The webcast originates from a cramped 12x12 cabin in Talkeetna, Alaska.  It's as close to Northern Exposure's funky radio station as you can get.  (Yup, there's a moose that hangs around the cabin.  And an adorable monkey too.)  They broadcast 24 hours/day, 7 days/week, 365 days/year with the help of tireless DJs - human and otherwise.  They've been on-the-air since August of 2002 and have served up well over a million individual 'listens' to independent musicians' tunes.

http://www.angelfire.com/games5/gamesm/oldieslist2003.html

Starting the day after Christmas at Midnight, for the 2nd straight

year, South FL radio station Majic 102.7FM is going to play EVER oldie
in their playlist in alphabetical order. All from "A Beautiful Morning"
by The Rascals to "Zip-A-Dee-Do-Dah" by Bob B. Soxx & The Blue Jeans.
Above is a website which is an incomplete episode guide or a "song
guide" if you will on what songs will be playing so those that are
intrested can follow along.

-Enjoy the music and Happy New Year!

baby butt
2 tablespoons each:
   salt
   black, white and cayenne peppers
   celery salt
   garlic powder
   parsley flakes
   brown sugar
1 teaspoon sage
2 onions
6 cloves garlic
bunch green onions, chopped

Cut the children?s butts and the beef roast into pieces
   that will fit in the grinder.
Run the meat through using a 3/16 grinding plate.
Add garlic, onions and seasoning then mix well.
Add just enough water for a smooth consistency, then mix again.

Form the sausage mixture into patties or stuff into natural casings.

## Stillborn Stew

By definition, this meat cannot be had altogether fresh,
but have the lifeless unfortunate available immediately after delivery,
or use high quality beef or pork roasts (it is cheaper and better to
cut up a whole roast than to buy stew meat).

1 stillbirth, de-boned and cubed
� cup vegetable oil
2 large onions
bell pepper
celery
garlic
� cup red wine
3 Irish potatoes
2 large carrots

This is a simple classic stew that makes natural gravy,
thus it does not have to be thickened.
Brown the meat quickly in very hot oil, remove and set aside.
Brown the onions, celery, pepper and garlic.
De-glaze with wine, return meat to the pan and season well.
Stew on low fire adding small amounts of water and
   seasoning as necessary.
After at least half an hour, add the carrots and potatoes,
   and simm

hour, add the carrots and potatoes, and simmer till root vegetables break with a fork.
Cook a fresh pot of long grained white rice.

## Pre-mie Pot Pie

When working with prematurely delivered newborns (or chicken) use sherry;
red wine with beef (buy steak or roast, do not pre-boil).

Pie crust (see index)
Whole fresh pre-mie; eviscerated, head, hands and feet removed
Onions, bell pepper, celery
� cup wine
Root vegetables of choice (turnips, carrots, potatoes, etc) cubed

Make a crust from scratch - or go shamefully to the frozen food section of your favorite grocery and select 2 high quality pie crusts (you will need one for the top also).
Boil the prepared delicacy until the meat starts to come off the bones.
Remove, de-bone and cube; continue to reduce the broth.
Brown the onions, peppers and celery.
Add the meat then season, continue browning.
De-glaze with sherry, add the reduced broth.
Finally, put in the root vegetables and simmer for 15 minutes.
Allow to cool slightly.
Place the pie pan in 375 degree oven for a few minutes so bottom crust is not soggy, reduce oven to 325.
Fill the pie with stew, place top crust and with a fork, seal the crusts together then poke holes in top.
Return to oven and bake for 30 minutes, or until pie crust is golden brown.

## Sudden Infant Death Soup

SIDS: delicious in winter, comparable to old fashioned Beef and Vegetable Soup.
Its free, you can sell the crib,

add onions, peppers, and celery (all chopped finely)
   and season well.
Place in a large bowl and cool.
Add seasoned breadcrumbs and a little of the tomato gravy,
   enough to make the mixture pliable.
Divide the stuffing among the cabbage leaves then roll.
Place seam down in a baking pan.
Ladle tomato gravy on top,
   and bake at 325� for 30 - 45 minutes.

Umbilical Cordon Bleu

Nothing is so beautiful as the bond between mother and child,
so why not consume it?
Children or chicken breasts will work wonderfully also.

4 whole umbilical chords (or baby breasts, or chicken breasts)
4 thin slices of smoked ham, and Gruyere cheese
Flour
eggwash (milk and eggs)
seasoned bread crumbs
1 onion
minced
salt
pepper
butter
olive oil

Pound the breasts flat (parboil first if using umbilical
   cords so they won?t be tough).

```
Place a slice of ham and cheese on each, along with some minced onion
   then fold in half, trimming neatly.
Dredge in flour, eggwash, then seasoned breadcru

consuming, this dish seems to take longer than it actually does;
as the entire house is filled with such a heavenly aroma,
the waiting becomes almost unbearable.

1 whole child, cleaned and de-headed
1 batch cornbread stuffing (see index)
� cup melted butter

Remove the giblets from the infant and set aside.
Stuff the cavity where the child?s genitals and anus were located
   using � cup per pound of meat.
Tie the arms flat to the body, then pull the skin flaps up to close the cavity.
Now tie the thighs up tight to hold it all together.
Place breast side up in a large metal roasting pan.
Bake in 325� oven covered for 2 hours.
Remove cover, stick a cooking thermometer deep into one of the
   baby?s buttocks and cook uncovered till thermometer reads 190�,
   about another hour.
```

## Pro-Choice Po-Boy

Soft-shelled crabs serve just as well in this classic southern delicacy.
The sandwich originated in New Orleans, where an abundance of abortion clinics
thrive and hot French bread is always available.

2 cleaned fetuses, head on
2 eggs
1 tablespoon yellow mustard
1 cup seasoned flour
oil enough for deep frying
1 loaf French bread
Lettuce
tomatoes
mayonnaise, etc.

Marinate the fetuses in the egg-mustard mixture.
Dredge thoroughly in flour.
Fry at 375� until crispy golden brown.
Remove and place on paper towels.

## Holiday Youngster

One can easily adapt this recipe to ham, though as presented,
it violates no religious taboos against swine.

1 large toddler or small child, cleaned and de-headed
Kentucky Bourbon Sauce (see index)
1 large can pineapple slices
Whole cloves

Place him (or ham) or her in a large glass baking dish, buttocks up.
Tie with butcher string around and across so that he looks like
he?s crawling.
Glaze, then arrange pineapples and secure with cloves.
Bake uncovered in 350� oven till thermometer reaches 160�.

## Cajun Babies

Just l

the stuffing:
   Marinate the flesh in a mixture of soy and teriyaki sauces
      then stir fry in hot oil for till brown - about 1 minute, remove.
   Stir-fry the vegetables.
   Put the meat back into the wok and adjust the seasoning.
   De-glaze with sherry, cooking off the alcohol.
   Add broth (optional) cook a few more minutes.
   Add the cornstarch, cook a few minutes till thick,
      then place the stuffing into a colander and cool;
   2 hours
Wrap the rolls:
   Place 3 tablespoons of stuffing in the wrap, roll tightly -
      corner nearest you first, fold 2 side corners in,
      wrap till remaining corner is left.
   Brush with egg, seal, and allow to sit on the seal for
   a few minutes.
Fry the rolls:
   325� if using egg roll wraps, 350� for spring roll wraps.
   Deep fry in peanut oil till crispy golden brown, drain on paper towels.
```

Lemon Neonate

Turkey serves just as well, and in fact even looks a bit like a well-dressed baby. By the time you turn the child?s breast into cutlets, it will be indistinguishable. The taste of young human, although similar to turkey (and chicken) often can be wildly different depending upon what he or she has consumed during its 10 to 14 months of life...

4 well chosen cutlets (from the breasts of 2 healthy neonates)
2 large lemons (fresh lemons always, if possible)
Olive oil
Green onions
Salt
pepper
cornstarch
neonate stock (chicken, or turkey stock is fine)
garlic
parsley
fresh cracked black pepper

Season and saut� the cutlets in olive oil til

bell peppers
Wooden or metal skewers

Marinate the meat overnight.
Get the grill good and hot while placing meat, vegetables, and
fruit such as pineapples or cherries on the skewers.
Don?t be afraid to use a variety of meats.
Grill to medium rare,
serve with garlic cous-cous and saut�ed asparagus.
Coffee and sherbet for desert then walnuts, cheese, and port.
Cigars for the gentlemen (and ladies if they so desire)!

Crock-Pot Crack Baby

When the quivering, hopelessly addicted crack baby succumbs to death,
get him immediately butchered and into the crock-pot, so that any
remaining toxins will not be fatal. But don?t cook it too long,
because like Blowfish, there is a perfect medium between the poisonous
and the stimulating. Though it may not have the same effect on your
guests, a whole chicken cooked in this fashion is also mighty tasty.

1 newborn - cocaine addicted, freshly expired, cleaned and butchered
Carrots
onions
leeks
celery
bell pepper
potatoes
Salt
pepper
garlic, etc
4 cups water

Cut the meat into natural pieces and brown very well in olive oil,
remove, then brown half of the onions, the bell pepper, and celery.
When brown, mix everything into

melted butter

Remove the giblets from the infant and set aside.
Stuff the cavity where the child?s genitals and anus were located
   using � cup per pound of meat.
Tie the arms flat to the body, then pull the skin flaps up to close the cavity.
Now tie the thighs up tight to hold it all together.
Place breast side up in a large metal roasting pan.
Bake in 325� oven covered for 2 hours.
Remove cover, stick a cooking thermometer deep into one of the
   baby?s buttocks and cook uncovered till thermometer reads 190�,
   about another hour.

## Pro-Choice Po-Boy

Soft-shelled crabs serve just as well in this classic southern delicacy.
The sandwich originated in New Orleans, where an abundance of abortion clinics
thrive and hot French bread is always available.

2 cleaned fetuses, head on
2 eggs
1 tablespoon yellow mustard
1 cup seasoned flour
oil enough for deep frying
1 loaf French bread
Lettuce
tomatoes
mayonnaise, etc.

Marinate the fetuses in the egg-mustard mixture.
Dredge thoroughly in flour.
Fry at 375� until crispy golden brown.
Remove and place on paper towels.

## Holiday Youngster

One can easily adapt this recipe to ham, though as presented,
it violates no religious taboos against swine.

1 large toddler or small child, cleaned and de-headed
Kentucky Bourbon Sauce (see index)
1 large can pineapple slices
Whole cloves

Place him (or ham) or her in a large glass baking dish, buttocks up.

Tie with butcher string around and across so that he looks like
he?s crawling.
Glaze, then arrange pineapples and secure with cloves.
Bake uncovered in 350� oven till thermometer r

all over your house from
carrying too much, nor will they have to make 10 trips back and fourth from the
service stations.

## Roast Leg of Amputee

By all means, substitute lamb or a good beef roast if the haunch it is in any way diseased. But sometimes surgeons make mistakes, and if a healthy young limb is at hand, then don?t hesitate to cook it to perfection!

1 high quality limb, rack, or roast
Potatoes, carrot
Oil
celery
onions
green onions
parsley
garlic
salt, pepper, etc

2 cups beef stock

Marinate meat (optional, not necessary with better cuts).
Season liberally and lace with garlic cloves by making incisions, and placing whole cloves deep into the meat.
Grease a baking pan, and fill with a thick bed of onions, celery, green onions, and parsley.
Place roast on top with fat side up.
Place uncovered in 500� oven for 20 minutes, reduce oven to 325�.
Bake till medium rare (150�) and let roast rest.
Pour stock over onions and drippings, carve the meat and place the slices in the au jus.

## Bisque � l?Enfant

Honor the memory of Grandma with this dish by utilizing her good silver soup tureen and her great grandchildren (crawfish, crab or lobster will work just as well, however this dish is classically made with crawfish).

Stuffed infant heads, stuffed crawfish heads, stuffed crab or lobster shells; make patties if shell or head is not available (such as with packaged crawfish, crab, or headless baby).
Flour
oil
onions
bell peppers
garlic salt, pepper, etc.
3 cups chicken stock
2 sticks butter
3 tablespoons oil

First stuff the heads, or make the patties (see index) then fry or bake.
Set aside to drain on paper towels.
Make a roux with butter, oil and flour, brown vegetables in the roux, then add chicken stock and allow to simmer for 20 minutes.
Add the patties or stuffed heads, and some loose crawfish, lobster, long piglet, or what have you.
Cook on low for

1 cup chopped celery
Vegetable oil (or hog fat)
Salt, pepper, garlic, etc.

Lightly brown onions, celery, garlic and meat in large heavy pot.
Add a little water and the greens (which should be thoroughly cleaned and washed).
Smother slowly for at least 2 hours, adding small amounts of water
   when it starts to stick.
Stir frequently.
When ready - serve with rice, grilled smoked sausage, green salad, and iced tea.
Coffee and apple pie then brandy.

Maternity Ward Pot Luck Dinner

If you can?t get anything fresh from the hospital, nursery, or morgue; you can at least get rid of all the leftovers in your refrigerator.

1 - 2 lbs. cubed meat (human flesh, chicken, turkey, beef...)
1 -2 lbs. coarsely chopped vegetables
(carrots, potatoes, turnips, cauliflower, cabbage...)
Bell pepper
onions
garlic
ginger
salt pepper, etc.
Olive oil
butter

Brown the meat and some chopped onions, peppers, and garilic in olive oil, place in baking dish, layer with vegetables seasoning and butter.
Bake at 325� for 30 - 45 minutes.
Serve with hot dinner rolls, fruit salad and sparkling water.

B�b� Buffet 1

Show off with whole roasted children replete with apples in mouths - and babies? heads stuffed with wild rice. Or keep it simple with a hearty main course such as stew, lasagna, or meat loaf.

Some suggestions

Pre-mie pot pies, beef stew, leg of lamb, stuffed chicken, roast pork spiral ham,
Cranberry pineapple salad, sweet potatoes in butter, vegetable platter, tossed salad with tomato and avocado, parsley new potatoes, spinich cucumber salad, fruit salad
Bran muffins, dinner rolls, soft breadsticks, rice pilaf, croissants
Apple cake with rum sauce, frosted banana nut bread sherbet, home made brownies
Iced tea, water, beer, bloody marys, lemonade, coffee

The guests select fo

There is a IRRS special broadcast
on Christmas day using 100 kW
(Saturday Dec 25) on 13840.

We will also be using 100 kW on
Fridays and Sunday evening from
2100-0000 CET effective from
3rd of December 2004.

All other evenings we will be using
20 kW from 2100 -2230 CET.

Seems like everyone is hitching a ride on the digital radio bandwagon. The latest aboard is good old BT, which today announced its Aviator 10M model. There isn't a huge amount to say about it apart from it tunes into both digital and FM stations, features an alarm and has five (which seems a bit mean) presets.

It does however boast a record feature which will keep up to ten minutes of radio, enabling you to nip out to the office, feed the cat or whatever else you fancy and not miss a second of your favourite show. The BT Aviator 10M also has the ability to play MP3s if they are stored on standard SD and MMC Cards.

Its is on sale now for "reasonably competitive" �129.99

12 December 2004

Accessing satellite radio on mobile phones would be possible in the next five years. Hugh Panero, chief executive officer, XM Satellite Radio Holdings, has confirmed that his company is exploring the possibility of the merger of the two technologies. Panero says, "Our core base is people who listen to radio at home and in the car and now in the mobile market. I think that as other distribution points present themselves, whether it be cellphones, or other mobile devices, we obviously can have a place in that."

XM Satellite Radio is in discussion with other service providers and hardware manufacturers. "They clearly have a need to efficiently provide content that will help motivate people to buy their hardware and we're a natural place to go as we have become a more important player in content," Panero said. Panero cited greater interest now that XM, the satellite market leader against No. 2 rival Sirius Satellite Radio, draws near three million subscribers.

"When you first start out, you knock on a lot of doors. But when you wind up getting nearly 3 million subscribers... the deal flow moves to you," he said. "We're a natural place that people want to go to explore how we can do things together. Then you get a lot of engineers together and as long as they're all motivated and in the same room, magic can happen. And that's what I think will happen over the next five years," he said.

XM in late October unveiled its wearable Delphi XM MyFi to further differentiate itself from Sirius and to lure users to a medium previously confined to the home and the car. The MyFi costs $350 in addition to XM's $9.99 monthly fee for more than 130 channels of commercial-free programing. It can run for five hours on a rechargeable battery and uses an antenna in its case to draw down the satellite signals.

Text of press release by the Cary, North Carolina-based Christian radio station Trans World Radio on 29 November

Reaffirming a longstanding commitment to proclaim the good news of Jesus Christ throughout South America, international Christian broadcaster Trans World Radio (TWR) on 21 November formally dedicated a new 50,000-watt shortwave transmitter in the southern city of Santa Maria, Brazil. The new broadcasting outlet marks TWR's 14th major international transmitting site, and it fortifies the Mission's nearly 35-year-old evangelical outreach in Brazil.

Broadcast radio DJ James Patterson, who is also licensed amateur M1DST, is attempting to smash the world record for the longest continuous broadcast. His attempt commemorates the 10 years since his friend Dawn Easterling died at the young age of 19. James last smashed the world record with a marathon broadcast of 72 hours in September 2000, raising funds for the Dawn Easterling Appeal by asking listeners to donate money in return for record requests and dedications.

This time, James will be broadcasting a show live on DAB's Swindon FM
non-stop for a full 180 hours. That's seven and a half days without any
sleep! The show will kick off on Friday 10 December at 6.00am. Medical staff
will be on hand in case James suffers from sleep deprivation. James said, "I
have done lots of research into staying awake since my last record breaking
broadcast, so I know what I am up against! I am really looking forward to
breaking the world record, which is currently 120 hours. I will be prepared
as much as I can be and have the full support of my family and friends."

Julia Day
Thursday December 2, 2004
The Guardian

It launched the careers of Noel Edmonds, Peter Powell and David Jenson and now, 12 years after disappearing from the airwaves, the legendary Radio Luxembourg, self-proclaimed "station of the stars", is set to be revived.

RTL, a subsidiary of German media group Bertelsmann and Five shareholder that grew out of Radio Luxembourg, is considering resurrecting 'Luxy' by broadcasting it into the UK from overseas on a new radio transmission technique which enables cross-border digital broadcasts.

"We are considering relaunching a UK station from outside of the UK. It could be from Luxembourg, France, Germany, Finland - it depends where we can get a capacity of transmitter sites," said a spokesman.

"Whether it will be the 208 Radio Luxembourg formula, who knows? But it is something we're thinking about."

The digital radio format in operation in the UK relies on a network of local transmitters, but the new Digital Radio Mondiale (DRM) format can transmit long distance and is currently being tested by the BBC and others.

RTL has decided to go ahead with DRM broadcasts in a bid to encourage manufacturers to build DRM radio sets, which it hopes will be in the shops in time for Christmas 2005.

RTL is already broadcasting via DRM from Luxembourg to France and begins broadcasting to Germany next year.

What XM service does the writer subscribe to? The one I pay for has
commercials on all but the music channels. Same with SIRIUS. Does he
pay extra for the 100% commercial free service? How much extra is it?

Rich

Yeah, that's right Mikey, you couldn't give the frequency info could you? Made
me go look for it:

Media Network adds: According to the Website of TWR Brazil, the new 50 kW transmitter operates on 11735 kHz, and the station also uses 9530 kHz (10 kW) and 5965 kHz (7.5 kW).

I think that without DRM, the future of MW in Europe does not look positive
at all.
If only AM would be continued, DX-ing would become gradually easier, as one
by one the AM transmitters would be switched of so that MW in Europe would
become quite empty. But then again, the band was not meant for DX-ers....

"Euronet Radio is pleased to announce its forthcoming return to regular broadcasting on shortwave in Europe.

The Euronet Radio group has been experimenting with high-powered shortwave transmissions targeting the British Isles and continental Europe since 2002.

We look forward to delivering a variety of programming via shortwave in 2005.

Keep checking our website for further details regarding the launch of our regular broadcast schedule:

http://www.euronetradio.com

When regular operations commence, our programme content will include items of interest for radio hobbyists, anoraks and radio amateurs, all blended together with the very best music from the 60s, 70s and the 80s.

All Euronet Radio broadcasts are fully authorised and originate from a 100,000 watt transmitter located at Ulbroka in the Republic of Latvia.

Thankfully, the RTL broadcasts in DRM on 5990 and 6095 kHz (24 hours per day) come in here to Detroit, MI USA during certain hours of the day whenever nearby frequencies aren't occupied.  In fact, I'm listening to the French program on 5990 right now (2 AM in Detroit).

I have Sirius and I think it is great!  It is one of the best
purchases I have ever made.  The music channels, while not as deep as
XM's play music you are familliar with and don't have to wait a day to
hear a song you like.  Sirius, in my opinion, has better talk than XM.
 If Sports is your thing then Sirius is the way to go!  Sirius has a
24/7 NFL channel, and also plays college football, basketball, NHL,
and British Premier Soccer League games.
I would definately visit both of their websites.

Windward Radio is not your average classic rock station. Programmed by a veteran broadcaster and music director, Windward Radio takes the best rock from the 60's, 70's, 80's, and early 90's, and molds them in to the epitome of "Classic Rock That Really Rocks".

You will hear everything from Jimi Hendrix to Stone Temple Pilots, >From Led Zeppelin to Green Day. Not satisfied to simply play "Just the Hits", Windward Radio offers the BEST in classic rock, from Chart-Toppers to B-Sides.

Listen to Windward Radio now at http://radio.windwardpass.org

A station (WPRB) when it signs off for the night, the stream continues to feed static and the mixed music from the stations next to it on the dial.

The delay from the station in real time to the stream is quite long - about ten seconds.

Is this typical? What do you think's going on engineering-wise :)

What is everyone's thoughts of Sirius's sports and music programming?

I think the music channels are great, there are repeats, but hey, some repeats are good.  The sound quality is superb, and I think te DJ's ad a little "zing" to it.  My favorite has to be Hits1, but I also enjoy tons more.

I am a football fan, and I like being able to hear both NFL and

College games from across the country.  I am also looking forward to the NHL and British soccer games.  March Madness should also be great!

CC's KBME (am 790 Houston) says (according to a newspaper article) it will officially kick off its all sport format on 12/20/04.  I believe they are using syndicated programming most of the day but have hired Charlie Palillo from soon-to-be-rival KILT-am (all sport for about 10-years)  Palillo will host an afternoon/pm-drive talk show.  He'll certainly get support from co-owned news/talk KTRH's sports staff. Palillo has been co-hosting KTRH's evening "Sports Beat" program for the past couple of weeks.

So far it would appear the Astros will stay on KTRH since that's what the contract calls for.  I would imagine KBME will compete for Rockets and Aeros (minor league hockey) and Texans when those contracts become available.

Meanwhile KILT announced that after a parade of co-hosts, Texans play-by-play announcer Marc Vandermeer will replace Palillo as pm-drive co-host with long-time staffer Rich Lord.  Vandermeer had been doing a short call-in show in the mornings on KILT.

Hey Guys

Just wanted to make you guys aware of www.kwiksounds.com. We offer
some great buy out production music on CDs or immediate downloads. The
CDs are only $29.97 each, and the complete 14 CD library is $249. The
music has been used by Bellsouth, Discovery Channel, The Outdoor
Channel, ESPN, and many more. Each disc only has one style music
edited in :30, :60, and a long cut in most cases. So check them out!
If you order the complete library, you get a bonus CD of all thh music
in the "new music" catagory.
We just uploaded some new orchestral music from a group of German
writers that are fantastic! Only 5 of 50 cuts have been uploaded and
ready for purchase, although the rest will be up shortly. Please come
by and check us out.

If you have any constructive suggestions, please sign the guest book and let us know if you are looking for something we don't have so we can try to provide it for you.

Thanks and have a great day!

Danny Jones
President
Kwiksounds

For sale:

(The "Radio Crazy" is baaaakkkk!) Hi!

Partial ownership in AM/FM radio station in central Georgia. Heard in Warner Robins, Perry, Hawkinsville, Eastman, Dublin, etc. Warner Robins may well be one of the fastest growing cities in the nation!

This is a joint venture. There is an element of risk and you could lose all or part of your investment.

Active or inactive investors with at least $25,000 each are welcome. No individual can own over 49 percent. This rule applies to me too! All investors would be on the board with full voting rights if desired.

Tower, land and building are included. Total asking
price is only $300,000. (An FM was sold in nearby
Macon, GA a few years ago for $59 million!)

Only those willing to sign a confidentiality agreement
will be told where the stations are.

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"
aka Moron Gottesman.

Can anyone recommend some automation software that will run under
Linux?  I have been using a windoze based product until now and I am

tired of the reliability problems inherent to windoze. It doesn't have to be loaded with features, just the basics. I operate a low power, non-profit, "Part 15" AM station that is on the air 24/7, so cost is an issue as well.

I have Googled this topic a lot, and have only come across a lot of "beta" versions, or sites that say that "they are working on it, and will release a beta soon..."

Any suggestions?

Anyone??

This is great news for Sirius! Now on top of all the great NFL, College, NBA, NHL we have soccer! I am looking forward to this, and it truly just adds to the overall picture of the great sports programming. Congrats Sirius!

>issue as well.

The only one I can think of that will run on Linux is Scott Systems.  They have a version for Windows XP and Linux.  But the cost may be out of the ball park for your type of station.
Also try  http://freshmeat.net/  for other Linux programs.

Dennis

Does it have to be Linux?  I've seen a "Part 15" station that was completely
programmed on an Apple iPod.  Of course the owner used a PC to make the
MP3s, upload them, and program the iPod, but once that was done the iPod
alone ran the station 24/7.  To top it off, the iPod and the transmitter
were powered by a solar panel and storage batteries!  Very clever
arrangement.

Man, that's a great question!  Maybe it's like timeshare....you only can buy a
week
of ownership per year, so that Meyer can sell the station 52 times.

> Is this typical? What do you think's going on engineering-wise :)

Well, the first part is fairly obvious, isn't it?  The station is using its off-air monitor to feed the encoder, or the encoder is off-premises, and is taking the feed off the air since that's a no-cost way to get the programming from the studio to the encoder.  The second part is that most encoders need some time to encode the audio, plus your player buffers the stream so as to be able to, maybe, fill in a missing packet to reduce dropouts.  The delay resides almost entirely within the player because of this need, however.

Hello!

Experienced Voice Actors or Voice Talent with
ISDN studio capabilities interested in working
with a national talent agency, please visit
ProComm Studio Services online at

http://www.procommss.com/contact_jobs.php

We're constantly expanding our worldwide voice
roster.  Want to have your voice made available
to thousands of top ad agencies and work with the
cool ProComm team? We can't promise anything but
if your style fills a niche we don't have, this
could be the start of a great relationship!

Thanks!!
Talent Liasion

I think they are streaming from the output of the station monitor, and
the checklist for the board op at the end of the day does not include
shutting off the station monitor...

XM acquired the only radio rights that really mean anything when it got baseball for the next 11 years. Many teams have huge out-of-market followings, and the TV Extra Innings package, while helpful, frustrates fans with its complex blackout restrictions that prevent the airing of all teams' games in most areas. XM will plug that gap with home feeds of every game.

Sirius greatly overpaid for the NFL. Most fans set aside Sunday afternoons for football on TV, not radio, and the Sunday Ticket package provides every game, albeit not on cable yet due to the ill-advised exclusive deal with DirectTV. Hockey (if it ever comes back) and English soccer are niche sports, unlikely to generate significant number of new subscriptions. March Madness is four freakin' weeks and not even every day of those weeks -- Sirius paid big bucks for fewer than 20 days of programming, and when the tournament gets down to the Sweet 16, every game is on national TV anyway, so Sirius will only be providing something unavailable to out-of-market fans (who, along with gamblers, are the target audience) for the first two rounds.

Also, won't XM be able to carry the home feeds of all the schools in the conferences it carries should they get to the tournament, or did its deals with the ACC, Big Ten and Pac Ten only apply to regular season and conference tournament games? XM somehow managed to air the Big Twelve championship football game -- Oklahoma vs. Colorado -- a couple of days ago despite having no deal with the conference or either school, and Sirius has shut XM out of home feeds of USC, UCLA, Michigan and Ohio State, despite XM's having a contract with those schools' conferences, by signing exclusive deals directly with the schools, so who knows what "exclusive" means in the backstabbing world of sat radio sports rights?

I wouldn't want anyone shutting off the station monitor!

Hardly sounds like a balanced analysis.  Why so sour on Sirius?  To me,
the latter has better and more diverse overall content--including
sports.  But I wouldn't trash XM as a result.

John Figliozzi

I have an old aviation Airmans Chart dated 1942. It shows a radio tower, KINL, just north of Juneau, Alaska. It does not list a height or frequency. Does anyone know if it was located at Lemon Creek, north of Juneau? Are the old concrete foundations seen there perhaps part of this station? KINY, still an active station, was listed on the chart as well. Anyone know where I can find more info in KINL?

thanks
LJB

Great points stated below. Here's my $0.02 worth...

I agree with the points stated below and add the follwing thoughts.

As for the hardware, I personally prefer the look of the Sirius products over XM. I prefer the Sirius boombox look over XM's. Both company's boomboxes sound great, however.

As for the music content they're the same with a few exceptions. Sirius lacks the equivelant of XM's channel 50 (XM50) and the only Kids content I found on Sirius is Radio Disney whereas XM has Disney and their XM Kids format-- both are loved by my kids, by the way.

What really sells me on XM is the baseball package. As a fan of several baseball teams I can honestly say my summers will never be the same from now on! Like the poster below, I love my football too but I budget my TV time and plan accordingly. Baseball goes over well on the radio. Football leaves a lot to be desired on the radio-- no matter who the announcers are.

This from http://www.thesuperstation.co.uk/sale.htm (superb photos there as well).

"This is the former home of Laser 558. The MV Communictor is currently situated in St Margarets Hope in the Orkney Islands.

The ship has a 200 ft radio transmission mast along with 4 generators and engines needing attention.

The MV Communicator was vandalised during her time in Holland and requires some TLC.

Steeped in history there are only 2 working radio ships left in the World.

Recently used as The Superstation this piece of broadcasting history is a fantastic marketing tool for any radio station.

Built in 1954 by Abeking & Rasmussen in Lemwerder/Bremen (West Germany) for Det Stavangerske Dampskipsselskap (DSD) in Stavanger (Norway) as a cargo vessel. The tonnage of the vessel was 477 GRT, 190 NRT and 575 TDW and the vessel measured 186,8 / 29,3 / 8,7. The ship was one of six similar ships owned and operated by the company to carry cargo between Bergen, Stavanger and Oslo. Before renamed MV Communicator the ship was called Tananger, Charterer and Gardline Seeker.

NO Radio equpiment is included in the sale.

Offers over �25k."

(Thanks to Steve Martin for telling us about this).

I'd say the Houston @ Road Runner is somewhat of a give away ;)

I'd suggest they check out www.xm.com and www.sirius.com, both offer in home models, both are of course subscription services.

Az.

In article <cod4pd$hrf$1@xuxa.iecc.com>,
David Eduardo <amdavid@pacbell.com> wrote:

>95% of Americas listen to radio.

I don't believe that number for a moment (even stipulating the typo). If you had said "are exposed to radio every week", I might be willing to go along.  But exposure and the sort of attention that is implied by "listen" are very different things -- something advertisers are beginning to understand.  (That's also one of the flaws in Arbitron's "portable people meter" methodology: it's as good a measure as the sample size allows for *exposure*, but can't measure *listening*.)  As an advertiser, a potential customer who is merely exposed to my message is not worth nearly as much as a potential customer who is actually paying attention.[1]

Although the current talk about shorter stop sets is evidence that both broadcasters and advertisers are getting this message, it's not clear that they will really benefit, now that they have trained the audience to tune out (either mentally or physically) as soon as the first spot begins. (How do you promote shorter stop sets? "Only five commercials up next before another long music set on Q-92?")

Meanwhile, we have a whole generation growing up in today's toxic media environment who neither look to radio for entertainment nor are particularly influenced by current modes of advertising. (Brings a new meaning to "you're soaking in it!") Compare the size of a suburban teenager's music collection to the playlist of one of your radio stations; I'll bet you nine times out of ten, your hypothetical teenager enjoys a greater variety of music than you play.

For most of the past forty years, music radio has been the leader in introducing people to new music, which they could then go out and buy. (That's why over-the-air radio only has to pay license fees to the songwriters and composers, and not to the performers or record labels: it's considered a promotional expense to sell more recordings and concert tickets.) Today, with a few bright exceptions, radio has made itself largely irrelevant to this marketplace. Is it any wonder that audiences no longer expect radio to provide new music?

>Either you are wrong, or there are not many bright people in America
>any more.

There never were, by definition. Garrison Keillor to the contrary, there is no place were "all the children are above average".

-GAWollman

[1] A good example: I was at my dentist's office last week. As an observant person and radio junkie, I noticed that she had WCRB on, rather than her usual WROR-FM. If I had been wearing a PPM, it would have credited WCRB with 45 minutes of my time -- even though I paid no attention to it (or to the advertising messages) after recognizing the source. I know from talking to my dentist that she puts the radio on to provide soothing background noise; only a patient who has arrived early for an appointment has enough attentional resources to notice the actual content of the programming. I regularly freak out Jennifer, the dental assistant, when I make an off-hand comment about something that just came out of the radio, and she had so completely tuned it out as background noise that she has absolutely no idea what I'm talking about.

Why don't you supply us with some input to the poor individual's question instead of this smart ass type of response.  Az answered very thoughtfully.

To Walt:
As Az pointed out, visit the XM and Sirius web sites.  Look at their program guides.  You will find that one service will provide programming you cannot get on the other, e.g. NFL football v. Major League Baseball. Also note which "talent" is airing on each service, e.g. Howard Stern will be on Sirius in a couple of years (a major turn off to me).  These two will fight long and hard for their services, so you probably can't lose with either one at this time.

As for installation, a home "boombox" system would be the easiest to install.  As I have never dealt with satellite radio personally, I would assume you would have to run an outdoor antenna, but this will not be a big deal.  The antenna itself is a small device, no huge multi-element directional as of old.  From there you can get car adapter kits and use the same receiver that drops in the boombox.

Good luck and do you homework.  Do not let the others discourage you from asking legitemate questions.

```

Fair enough, on all counts.  Certainly the issue of intent has a lot to do with it.
I still think that artist-oriented promotions are bad for the business, though, since
it gives the established major labels more of an advantage than the indies.

Lack of _interest_ in financing caused by lack of listeners (i.e., the
service lacks much worth while utility) which has been the case lately with
all but a few of the shortwave broadcasters--it's been shutdown after
shutdown over the past few years.

Telefunken will provide BCE's Marnach site (1440 kHz) with a new TRAM/P 600 unit, consisting of two 300 kW transmitters. The system can be easily switched between DRM and AM operation.

( Press release (in German).
http://www.telefunken-endersysteme.de/News_Presse/RTL_digital_MW/
rtl_digital_mw.html )

Meanwhile WRN stated on enquiry that for the time being no changes for the AM transmissions of CRI on 1440 are planned.

(Kai Ludwig, Germany, Nov 28, DXLD)

> by "listen" are very different things -- something advertisers are
> beginning to understand.

Advertisers are not making distinctions because what they care about is getting the message across, not who turned the radio on. In any case, many different methodologies, including Arbitron, show that 95% of average Americans... or Canadians... or Mexicans... listen to the radio at least once a week with enough awareness to identify such listening. Such surveys can even be replicated with simple phone samples. It is a fairly uncontested fact in media and ad circles.

>  (That's also one of the flaws in Arbitron's
> "portable people meter" methodology: it's as good a measure as the
> sample size allows for *exposure*, but can't measure *listening*.)

First, no one cares. Second, the People Meter is not in use yet in the US and it will probably not be until,perhaps, 2007 at the earliest.

>  As
> an advertiser, a potential customer who is merely exposed to my

> message is not worth nearly as much as a potential customer who is
> actually paying attention.[1]

There is no way of telling this with any kind of sample. Advertisers know this, and know that a percentage of messages are not noticed for a variety of reasons. You won't see this discussed in AdAge... just here, where no national advertisers are paying any attention.

>
> Although the current talk about shorter stop sets is evidence that

> commercials up next before another long music set on Q-92?")

Shorter stop sets are intended to improve the effectiveness of messages and to keep listeners longer. Many boroadcasters were not running excessive spot loads anyway... and none were running the loads common in the 50's and 60's.

>

Radio does not target teens in most markets since there is little ad money against them.

>
> For most of the past forty years, music radio has been the leader in

> it's considered a promotional expense to sell more recordings and
> concert tickets.)

Wrong. the reason the RIAA never got performance rights such as are common in other developed nations is that they did not get to the table early enough, and now it is too late.

As to being considered promotional expense, that is pure malarky.

> Today, with a few bright exceptions, radio has made
> itself largely irrelevant to this marketplace.  Is it any wonder that
> audiences no longer expect radio to provide new music?

They never did, except in small amounts. what has happened is that more now music is being exposed today, as there are more formats available on more stations in every market. A couple of weekly adds a week across 10 formats is a lot of songs; in the 50's and 60's you got 2 to 3 adds on a mass appeal top 40 station, and that was all.

>

No different than a person who puts on a radio and leaves it on during work... may only hear part of the ads. Advertisers know that. Always been that way.

Wow! Thanks for the information Mike! This makes purchasing a more difficult choice. I know that XM carries MLB (Major League Baseball), so if you like baseball and soccer, you may need two services! Now if you like NFL (National Football League) games, you are in luck, I believe they are on Sirius.

I love to watch Premiere League on Fox Sports World.

Later!

I.

I don't see AM/FM radio having a future.Other than news,what reason is there,to listen to AM/FM radio anymore? And how many news stations can you really have in an area? Annoying dj's,cheesy contests,etc..not for me! And AM/FM stations have an average of what,15-16 minutes of commercials per hour?

As far as music,I've gone to satellite radio.

Today's teens are not going to magically "grow into" radio listeners when they hit 21.  I work with a lot of twenty-somethings, and when I ask them about what their radio listening preferences are, the answer I invariably get (and have gotten for at least the past five years) is "none".  They have no use for it.[1]  Not having formed the radio habit, they are unlikely to suddenly start listenting when they leave school.

-GAWollman

[1] Just look around at college stations whose affiliated schools do not have broadcast, communications, or journalism programs. Many of them have great difficulty getting actual students (whose activity fees often pay for the station) to take any interest at all in radio as anything other than "a bigger music collection than I have at home". All too often, the program schedule is dominated by alumni, unaffiliated community members, and others from the previous generation.

Actually, there is a very easy way for an advertiser to tell whether their message is reaching customers who are paying attention: ask the customers!  I can't think of any major purchase I've made where the seller did not do so, either at the time of sale/service or during post-sales followup.  I've also been the recipient of a number of brand-awareness telephone surveys which measure the same thing for non-durable goods.

Artist promotions are seldom done with unknown artists. Usually, stations
limit such activities to tie ins with major artists or newer ones who have a
string of recent hits. So, the issue for big vs. small labels is in getting
initial airplay or sales or alternative media promotion (like clubs for
dance music), since stations will not do a promotion with a "small" artist
as a general rule. the idea, of course, is to tie in with the bigness of the
artist to enhance the station image.

Actually, most do. Once a person has more concerns in life, like a job,
family, and such, they find the time needed to download, burn CDs and such
is much more limited. So radio take a place in thier lives gradually in the
18-24 period.

>  I work with a lot of twenty-somethings, and when I

Actual market measurements done scientifically show that, even in 18-24,
over 90% of people use radio weekly.

That only shows a tiny portion oflisteners... those who at that moment have
an interest in the particular product or service. For example, a person who
buys a new car every 4 years only pays attention to car ads when the time
comes to look for a new car. Otherwise, they do not hear the ads at all.

That does not measure whether people heard the ad or not. It only measures the effectiveness of the ad in getting people who are potential consumers to buy or inquire.

Stations in the 80's introduced new songs into their formats at about the same rate as in any other decade. In fact, the 80's was the decade when music research other than tracking sales came into its own, and that caused a reduction, if anything, in new music adds.

No, the average is 3 to 4. But who cares? I don't want to hear new or old music in a format that I do not enjoy. However, the fact that so many different formats are exposing some new songs each week means that there are more opportunities to break a song.

Yes, that's OK and true enough on a difficult AM channel. I doubt anyone listening to a local AM broadcast would be easily convinced though. To be fair, the article went on to explain the target audience was the former, rather than the latter.

Cheers,
David.

But what happens when it doesn't take any time to download,
and there's no burning?  When your local-wireless (Bluetooth
or whatever) enabled pocket music library device just gets an
automatically downloaded playlist of recent stuff (based on an
automatically learned profile of the types of things you like
and how adventerous you are)?   You just pick it up and carry
it with you, and play it wherever you go.  Your wireless
mobile network device picks up your news, weather, and traffic,
in the car, office, or home.  And there are no commercials in
all this (except maybe the ones you actually ask for).

I think there's just about one more generation left before
that's the way it all works.  There will still be a need
for content, but the broadcasting mediums and economics
might be very different from what we've had up to this point.

International broadcasting is alive and well on WRN.  Available 24/7
on Sirius.

I agree. DAB is clear, near-FM quality sound, not DRM.

For sale:

(The "Radio Crazy".....it's baaaaaakkkkk!!!!)

Partial interest in AM and FM radio stations "all over da place". This is a joint venture and there is an element of risk. You could lose all or part of your investment. (Legal disclaimer...this "doomsday" scenario is not very likely to be the case).

Active or inactive investors are welcome with at least $5,000 (Five grand)each. No individual can own over 49 percent. This means me too! All investors would be on the board with full voting rights if desired.

There are also some LPTV CPs in play. Some are going for as little as $5100 !!!

References:

a-My parole officer. Mr. Larson E. Rapp, c/o Zing-Zing state prison, Ossingstink, NY. Tel: 1-800-IMA-THUG.

b-Trade reference.....Brazilian Bandit Airways, Oshkosh, WI airport. Purchased a one way ticket to Rio using all small and unmarked bills. Don't worry, YOUR funds are NOT deposited into my Swiss bank account until I have safely arrived in Brazil!!

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV

(The references are in jest, the deals are REAL!)

Yeah, but the former is an online service (yuck) and the latter is a
subscription-based satellite radio service (double yuck).

I wonder if this means that they are still continuing with the Orkney licence application but baseing themselves on dry land?

I must say the prospect of buying the ship is very appealing! Although I just can't see where it could be used as a base for a radio station, or what licence it would be worth going for.

Also, given that the ship is fifty years old and has undergone some abuse I would dread to think what the maintenance costs would be.

Looking at the pics on the website, it seems that the studios have been nicely fitted out though.

DAB Digital Radios make the perfect Christmas gift from under �50. That's the message coming out of your TV, radio, newspapers and magazines this Christmas.

On December 1, the DRDB (Digital Radio Development Bureau) launches its final promotional campaign of the year across more than 200 analogue commercial radio stations, including national, local and regional stations.

The 10 second and 20 second spots, which will run for nearly four weeks up to December 24, will also appear on DAB only commercial stations where listeners already converted to the benefits of DAB may be thinking of buying digital radios as Christmas gifts.

Produced by radio specialists, Radioville, for the Digital Radio Development Bureau, the ads focus on the fact that you can now buy a DAB digital radio for "under 50 quid".

The campaign is timed to mirror a multimedia promotion for DAB radio across TV, radio and outdoor sites from the BBC.

Promotions include:

* Classic FM has teamed up with Roberts Radio to give away a special Classic FM branded DAB radio every hour between December 13 and 19.

* Virgin Radio and Digital One are giving away a DAB radio every hour between December 11 and 24.

* Classic Gold is giving away a PURE Digital radio every day from December 1 to 24.

* Capital Gold is also giving away a PURE Digital radio every day from December 1 to 24.

* And DAB Digital Radios feature large in a whole load of BBC competitions across the analogue and digital Networks throughout December.

During next transmission of Scandinavian Weekend Radio, Virrat in Finland we shall have also our MW-transmitter 1602 kHz on (It's still part of our MW-tests). As normally we are on 48 and 25 mb's. All transmitters have power of 100 watts. Reception reports are most welcome specially comparing signals on SW's and MW's.

So transmission will start Friday December 3rd 22 hours UTC and will last 24 hours.

Note, we have quite interesting guests making programme also this time:
FAMOUS FINNISH PIRATE OPERATOR AND LISTENER Rick Random will be on air with his rock and radioprogramme. Happy listening hours!

| UTC-TIME | MW | 48MB | 25 MB |
|---|---|---|---|
| 22-07 UTC | 1602 | 5980 | 11720 |
| 07-12 UTC | 1602 | 6170 | 11690 |
| 12-18 UTC | 1602 | 5980 | 11720 |
| 18-19 UTC | 1602 | 5990 | 11720 |
| 19-22 UTC | 1602 | 5980 | 11690 |

I've gotten the distinct feeling that you can't stop insulting people.
It must be a genetic fault. You've managed to control it for the last
few days. Everything seemed fine. What triggers this new, very stupid
attitude? Alcohol? Insanity? Anger at anyone with a life?

Oh well.

Here we go:

Carl-Henrik Walde, Secretary of the Swedish National Committee of URSI (Union Radio-Scientifique Internationale), writes: "he venue will be on the west coast of Sweden, from around Thursday June 30 to Saturday July 2, 2005. There is a reason for these dates and the time period should be regarded as fixed, provided we get sufficient interest to launch such a seminar, symposium, or full-fledged conference."

"A few weeks ago, the Nordic Radio Society Foundation (NRS) had its 7th Nordic Shortwave Conference HF04 on the exotic island of F�r� in the Baltic. HF04 comprises VLF issues, albeit the majority is related to HF. 160 participants attended and I devoted my HF04 opening speech to radio station SAQ in Grimeton that had been added, on July 2 this year, to the Unesco World Heritage List:
"That HF04 opening night, I got congratulations for our world heritage success and people said 'now we must go to Grimeton' ...it came to my mind that we ought to organise an international longwave meeting in Varberg so as to combine present ELF, VLF and LF issues with a visit to nearby vintage SAQ. I got immediate support from industry, operators and various agencies. As a matter of fact, I was told that the most recent VLF meeting had been in York, UK, in 1992."

"Varberg is a 'Summer Town' and a perfect venue with all facilities within short walking distance (hotels, youth hostel, campus lecture halls, railway station, Denmark ferry terminal, parking lots, old castle, swimming, caf�s etc etc."

"SAQ was inaugurated on July 2, 1925 by King Gustaf V. The new reception building will be inaugurated on July 2, 2005, celebrating 80 years of SAQ operation. We hope a (member of) royalty will start the alternator to transmit a royal message. This will be the perfect final activity of the '2005 Grimeton longwave meeting'. Thus, the dates are fixed and we have already made a preliminary reservation of hotel rooms. So, please mark the dates in your calender - now."

"We doubt that we can find sponsors to cover an anticipated full conference loss. Do we keep the ambition low (=seminar)? Will we get a lot participants (=conference)? We know that we have to keep the fee reasonably normal and we hope to offer lower rates for university people."

"Therefore, I kindly ask you to tell us if you would be interested in taking part in a '2005 Grimeton longwave meeting.' All answers are without obligations, but we need them in order to help us decide if we should go on and, if so, the ambition. A first invitation and call for papers could be sent out in November, 2004."

All views are welcome. Please submit yours by email to the HF04 administrative secretary, Ms Winnie Svensson at AerotechTelub, e-mail: winnie.svensson@aerotechtelub.se (fax +46 470 42042).

By John Skipper, of The Globe Gazette, Iowa

Mason City - Bob Brown was sure he was the first newsman in the country to announce the death of movie actor James Dean 50 years ago.

Brown, the retired KGLO radio announcer who died Tuesday, loved to tell stories about his career and was telling them as late as Saturday.

George Bauer, former KGLO announcer who now is program director at KUOO Radio in Spirit Lake, interviewed Brown at his home three days before he died.

Bauer is writing a history of KGLO for his master's thesis at South Dakota State University and talked to Brown at his home. He said Brown's voice was weak but his memories were strong, including the story about the actor's death.

Brown told Bauer he was working at a radio station in San Luis Obispo, Calif., a few miles from where Dean wrecked his Porsche. The state trooper who handled the accident stopped at the radio station and gave Brown the information and he put it on the air.

Brown also told Bauer he once met a fellow on a train who turned out to be the "chief cutter" or film editor at Warner Brothers. He arranged for Brown to get a personal tour of the Warner Brothers studios where he saw Shirley Temple and Doris Day, and got to watch Humphrey Bogart filming on the set of "Treasure of the Sierra Madre."

He also watched Howard Hughes fly the famed "Spruce Goose" in California. Brown said he came to Mason City when the entire staff of KTAN Radio in Tucson, Ariz., was fired. Brown said he read about a job at KGLO Radio and Television, made a phone call and took the job over the phone.

"When we left Tucson it was 87 degrees. When we got to Mason City it was below zero. My wife said 'let's turn around and go back,' but we couldn't because I had taken the job," he told Bauer. "I never did get used to the Iowa winters," he said.

He said he also never got used to waking up early in the morning, even though he did it for 30 years.

In addition to being a KGLO announcer, he did commercials on KGLO-TV (now KIMT). He also learned to direct live TV and directed many editions of "Bart's Clubhouse," the afternoon children's show.

Brown told Bauer he was directing "Bart's Clubhouse" when news came in about the Charles City tornado in 1968. He said he instructed Bart Curran, the show's host, to go on the air and tell the kids to "tell your mom and dad to come to the television, it's important." Then the station broadcast live updates about the storm, rushing film from the scene and putting it on the air before it was even dry. He explained that film was used in those days, not videotape, and needed to be developed in the station's darkroom.

Bauer, who worked at KGLO from 1987 to 1990, said, "I got into radio because of Bob Brown. I remember one day he told a joke on the air and it was the first time I realized, 'Wow. Some guy is doing that for a living.' I grew up listening to Bob for the school menus and his riddle from 'the poet of Rockford' every morning at 10 to 7. I met him when I was in seventh grade and he came to the Osage Junior High School to speak at a career day.

"The first day I sat in the studio across the desk from Bob Brown and Al Heinz, I couldn't believe I was there."

John Peel's widow and children are to finish writing the DJ's life story after he left an uncompleted autobiography when he died.

The late radio legend wrote more than 50,000 words before suffering a heart attack in Peru in October.

His wife Sheila and their four children will add "biographical material and personal reminiscences" to the book, to be published in October 2005.

It would be a "terrible waste" to let his work stay unpublished, Sheila said.

"We thought long and hard about what we should do with John's autobiography," she said.

"This book was very important to him and he was very excited about writing it." He would have wanted his family to complete it, she added.

Larry Finlay, managing director of publisher Transworld, said he was working with the family to "publish the book that I know John himself would have wanted".

The DJ signed a deal worth up to �1.6m for the autobiography with Transworld after a bidding war in April 2003.

Mr Finlay had previously said it was "sad" that unauthorised biographies had been hastily written since John Peel's death. Two have been published in the last week.

The publishers of those books have said they were only doing what countless newspapers, magazines, TV and radio stations and websites had done since his death - paying tribute to a much-loved broadcaster.

BBC Radio 1 has scheduled a night of tribute shows for Peel on 16 December.

Dear All,

we would like to inform you about a new program from SW Juelich in Germany:
Broadcaster: Radio Traumland
On Dec 05 only:
1400 to 1559 UTC, 5925 kHz, target Europe
>From Dec 12 on always Sundays, except Dec 26:
1400 to 1515 UTC, 5925 kHz, target Europe
and only on Dec 24
1400 to 1515 UTC, 5925 kHz, target Europe.

Any reception report would be highly appreciated.

Thanks in advance!

Very best,
Ralf Weyl

Hi, we are a Toronto multimedia company, looking for a French voice over for a corporate client. We need female for this project but would like to have male demos for future projects.

It can be recorded at our location or you can send it in.
Please e-mail me at

In case anyone is interested the word 'traum' in German equates to the word 'dream' in English.

Hence, the station is Radio Dreamland in English.

For sale:

(The "Radio Crazy" is baaaakkkkk!!!) Hi!

Partial interest in AM/FM station in prospering central Georgia. AM is non-directional 1 KW days, less at night. FM is "full" class "A" 6 KW ERP. Real estate IS INCLUDED!

Active or inactive investors with at least $25,000 each are welcome. No individual can own over 49 percent of the corporation. That applies to me too! All investors would be on the board with full voting rights if desired.

There is an element of risk and you could lose all or part of your investment. This is a JOINT VENTURE, group deal, call it what you will!

For those in the "know" the signal can be heard clearly on car radios in Warner Robins, GA. Home of Robins Air Force base. Warner Robins is possibly one of the fastest growing cities in the nation!!!!! Need I say more.

References:

a-My parole officer. Mr Larson E. Rapp, c/o Zing-Zing state prison, Ossingstink, NY. Tel: 1-800-IMA-THUG.

b-Trade reference.....Brazilian Bandit Airways, Oshkosh Airport, Oshkosh, WI. (Pilots get the connection!) Purchased a one-way ticket to Rio using all small unmarked bills. Do not worry as your funds will not be deposited into my Swiss bank account until I am safely in Brazil. I expect to be back in about seven years!!!

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV

(The references are in jest. The deal itself is real!)

Excerpt from press release on 1 December headlined: "DAB is here to stay! An international response from WorldDAB to the recently published statement by the Berlin and Brandenburg Media Authority (MABB)"

London, 1 December: The Media Authority of Berlin and Brandenburg is becoming more and more isolated from the rest of Europe - and, indeed, the world - in its support for other technologies at the expense of DAB digital radio.

The authority, which regulates media in the region, recently called for DAB Digital Audio Broadcasts to be scrapped in the Lander, saying the technology is "outdated" and a new standard should be adopted for digital radio by 2007.

Elsewhere in Germany, DAB broadcasting enjoys the support of local regulators and broadcasters. In this context, it might have been wiser for MABB to address the real issues with DAB in Germany, which have nothing to do with the technology itself.

The existing strong industry support must be corroborated by the introduction of DAB promotion on the FM network, an increase in transmission power to improve indoor reception and an increase in available spectrum in Band III. These criteria will finally allow DAB to fully succeed in a country that has heavily invested in a technology that is robust, reliable, flexible, established and ridden with opportunities for future developments, such as in the world of multimedia content delivery and telecommunications.

Prof Dr Wolf-Dieter Ring, president of BLM, the authority responsible for commercial broadcasting in Bavaria, explains: "DAB is the ideal system for the digitalization of radio and for the broadcast of data services. The problem does not lie in the DAB standard, but rather in the lack of consumer awareness and of effective marketing. BLM is fully committed to building widespread DAB awareness amongst German consumers."

Along the same lines, Prof Siegle of IMDR, the Digital Radio Marketing Initiative, says: "There is no better system than DAB to take radio digital. The standard was adopted in Germany in 2000, and like all new technologies we need to allow for a certain time-span before a full market is created. DAB plays a crucial part in the world of digital technologies, and the whole industry, in Germany and elsewhere, recognizes that."

>...the Alt Rock station in Albany plays the same songs by the same artists
>as the Alt Rock station in Wichita. Just like a burger at McDonalds, radio
>has become packaged and predictable.

How many people travel often between Albany and Wichita and spend enough time there to know the playlists are similar? Are you proposing that if Wichita plays a song, Albany can't? Who will keep the database of permitted songs in specific markets?

>The reason for this is well known, the radio stations are essentially bought and paid for by the record companies through what is known as Payola. So, they aren't in the business of helping you and I enjoy music, they are in the business of making money...

So, record companies should produce songs for individual communities and forego mass markets? I've programmed music stations in Boston, San Diego and New York, as well as hundreds via syndication over the years. Not once has any record company ever offered me anything that could be considered Payola. Where did I go wrong? All I got was a stinking phony bubble gum machine. In New York, my station was a Radio & Records reporting station. That should have been worth something - maybe at least a political-type junket to a warm, hooker-filled resort.

>Today, I have several options for hooking up an MP3 player to my car; from cassette adapters to units that allow me to integrate my iPod into the car - the iPod becomes my personal library of music that I have an interest in.

That's really the issue, not "cookie-cutter" formats. You want what you want when you want it. You're still a profit center for the record companies because I'm sure you're not illegally downloading or ripping CDs you haven't purchased. I'm sure you've paid for every cut that resides in the iPod (ripping other people's CDs isn't kosher, either). Remember, we're assuming you're honest.

With the legal and honesty issues out of the way we need to deal with all those people who still can't figure out how to get rid of the flashing 12:00 on their VCRs.

My car and home are wired and wireless. Like you, I'm what used to be called a Geek (now Techie). I can plug anything into anything. Even my Tivo updates itself wirelessly.

>Can radio overcome this uncertain future? Can they build audience loyalty? In short, NO. I think they have something major working against them: You can't be all things to all people, which is what they are relying on with a push model.

The "push" model is essentially the same as the mass marketing model. If every person demands a different music mix (with legally purchased music, of course) radio will go away, as will MTV and other sampling sources that now let you hear what music you want to legally purchase to fill your iPod. You are buying the music you're recording? Remember, I'm assuming you're honest. No swapping; by the letter of the law that says you can make an archival copy for your own use.

Let's go back to the labor-intensive nature of your model. I assume you have many small electronic devices. Each one has 97 more functions than you'll ever use. Do you remember all of them without going to the manual? My VCR requires 23 button pushes to set the clock. Some require two hands. Since I only use that sequence once or twice a year I haven't committed it to memory.

My car's battery went dead not long ago. I had to reset 2 clocks, a terrestrial radio's 18 per band station presets, 18 XM presets and 20 SIRIUS presets. I was living in New York during the last power failure. 29 hours without power. Everything had to be reset. I won't even attempt to calculate the number of button pushes needed.

How many people do you know who make regular computer backups? I have a 30gb MP3 player. The general rule in computing is not IF your hard drive will die, it's when. You are making backups of all that legally purchased music and are prepared to reload everything?

So, the mass market is gone. Not much new music is being produced except by those willing to let you legally purchase and download the few songs they cut in their garage (without egg cartons on the wall). Now we're reduced to recording ourselves in the shower. When I sing in the shower the tiles shatter, so that's not an option.

I know many, many people with gadgets. After a while they get tired of the work they require and either listen to terrestrial radio or silence punctuated by some obscenity hurled from the car in the next lane.

Too much work for all but the Geekiest among us.

Rich

I can see LEO satellites as a possible eventual replacement for shortwave.

But it's going to be pretty tough to get the costs low enough (both on
the transmitting side and the receiving side) to make it fly in poorer
countries.  (I'm not familiar with WorldSpace's pricing)  I've my doubts
that any scheme that involves monthly subscription charges will work.

> and forego mass markets?

I'd much rather see the majors continue to mass-produce, and the local radio stations offer a little better focus on local indie artists from time to time. Nine Inch Nails, formed by Trent Reznor, sounds incredible, but Reznor moved to my hometown from Mercer, PA to try to break into the business, and was spectacularly unsuccessful. I understand he hates Cleveland as a result, and given the abject lack of ANY kind of airplay he got from ANY of the commercial stations in town, I can't blame him for being angry.

I'm not saying indie rock is all the big stations should play, but it would be nice if more of them made an effort to help break new talent from time to time. Reznor had a sound that probably would have worked on WMMS (the local album-rock station back then), but did he get into the rotation there, ever? Ha. I never heard him on 'MMS. Not once. I heard more buzz from people I talked to working near a local college campus than I heard anywhere else, even a couple years later when the local Top-40 station flipped to "modern rock". (A few years later, however, the modern rock's station airplay of "Ballad of Peter Pumpkinhead" by XTC prompted WMMS to play the song too, which was rather amusing because I never figured I'd hear XTC on the radio at all.)

Hey, I solve that problem by only listening to FM :P

...which has been effectively dead for most of the past decade if not longer, according to what I see in the business (not radio trade) press.  For that matter, "mass marketing" radio went the way of the dodo at least as long ago.  Have you ever heard a commercial station with both Tim McGraw and Eminem in its playlist?  Yet I remember, as recently as the early 1980s, hearing Kenny Rogers and The Clash on the same station.  Even "We Play Everything" WRZA has settled down into its "males 25-54" niche; I venture to say (based on my admittedly limited listening experience) that their "everything" does not include either Celine Dion or Buddy Guy.

Talk to some of your advertising clients.... Even what were once considered to be the ultimate in mass-merchandised products (soap, hamburgers, Coke, tires) are now marketed just as narrowly as radio formats.  (This should come as no surprise to anyone, as the narrowing of radio formats was driven by the economics of advertising.)  Of course, narrower radio formats don't help advertisers who are seeking

an audience that doesn't use commercial radio at all (e.g., educated
adults 18-30, like most of my co-workers).

Given the rate of cultural fragmentation currently observed in this
country, the days of any sort of sustained mass audiences are long
over and unlikely ever to return.

The telcos were pricing it higher than many leased line facilities.  Hell,
you could get Switched-56 for less than ISDN in Richmond, VA.  (Sadly here
in GTE-land we couldn't get either).

I could get a 16KC 2-wire crosstown for less than a quarter what a single
remote ISDN circuit cost.  And I could get the 16KC loop installed with a
week's notice, instead of a year.

>(B) Yes, ISDN was expensive in some places. In Ohio we got lucky. Business ISDN

Residental ISDN?
You have to be kidding!
Was it actually on the residential rate schedule?  I gather that was
a non-tariffed service?  That never made it out anywhere around here.

>And I still maintain that ISDN was more useful for that time period than BPL
>will be now.

I dunno, but I'd sure like to be able to order 48F burglar alarm circuits
from the telco again.  Now THAT was a cheap way of doing remote work.  And
sometimes it even sounded good.

No, not at all.  Payola is long gone.  Back when there was payola, PDs were happy to play new music, because the record companies paid them to play new music.  Now everybody is terrified of playing new music, so they all have become followers.  Payola is what kept radio fresh and interesting for years, and what you're seeing with the current homogenization of commercial radio is what has happened as a result of it being eliminated.

Only problem with your scheme and frequency choice is that even very low power signals can propagate at odd times.  There are lots of hams running 1 or 2 milliwatts and getting contacts on HF frequencies, and signals from miles away would be just as receivable as those close by. Instant interference.  One of the reasons that VHF and up are so desired for data is that they propagate less than HF and below.

Allegedly two 470 mfd caps in series will match 8 ohms to 600 ohms.

Shack has an 8 ohm to 1000 ohm c.t. transformer that could work, too. Just pick off half the 1000 ohm side.

In Germany, the Media Council for Berlin and Brandenburg (MABB) has stopped issuing licences for Digital Audio Broadcasting (DAB). In that part of Germany, DAB has not proved popular with the public. Sales of DAB receivers have been below expectations, and consumer satisfaction with reception quality has been low. Especially troublesome is the poor reception of DAB inside buildings, whereas FM signals can still be received. A number of Berlin radio stations have already stopped relaying their FM services on DAB. They have been replaced by other services such as Roadradio (a motoring station), YOYO (a children's station) and the BBC.

The MABB says the technical quality of DAB, which dates from the 1980's and is still based on MPEG 2, has been superceded by superior technology. This view is not shared all across Germany. For instance, in Bavaria and Baden-W�rttemberg DAB is still being heavily promoted. But the MABB is already looking at the next generation of broadcasting technology such as DVB-H and DMB (Digital Multimedia Broadcasting). This is expected to be demonstrated on a large scale at the Internationale Funkaustellung 2005 in Berlin.

Residential ISDN is available in the Nashville area.  My boss had it a
few years ago - actually I'm pretty sure he still does.

Yeah, isn't that a shame?  No, really!  (I had to confirm that I wasn't being sarcastic, since a comment like that referring to Dion could be considered snarky).
That's exactly what I miss in radio today....way too predictable, no coliones to just
play something that's good, regardless of its genre.  Gone are the days when you could have a crossover pop hit, as in the days when Country was so big it crossed-over to pop, or (from the sublime to the ridiculous) when the Bee Gees went
disco, thus infiltrating AOR stations with the first beachhead for that abomination.
This effect appears also on satellite radio, where the music channels are so researched and segregated that it's YOU, the listener, who has to go search out diversity, because you're not going to find anything outside of the channel's target.

> Given the rate of cultural fragmentation currently observed in this
> country, the days of any sort of sustained mass audiences are long
> over and unlikely ever to return.

Which only goes to show that we, the American public, have lost our edge.  If we can't embrace the slightest little thing like music as a chance to see a little bit
more of the world, then how in the world can you expect that we'll even listen to something as important as where our country is going?

Ray Charles was, by most estimations, a great artist.  In my opinion, the reason why
he is considered so is because, as he said himself, the only thing he required of his
music was that it was "good music."  His search for "good music" changed our

culture,
adding jazz, blues, country, rockabilly, rock and so much more, making us the richer
for it, and in large measure, even, makiing it possible for acts like the Beatles and
other milestone rock acts to effect their own changes.

So here we are....stuck at a wall we will not climb.

I think I'm going to go out back and slash my wrists.

I don't believe you can "see" the Worldspace satellites from North
America, and even if you could, it's probably impossible to get one
activated unless you have a european address.

I realize the reception quality on satellite radio is much better than
that on shortwave, but is replacing a free service with a subscription
service really a sensible way to go (unless you own stock in the
satellite company!)?

Untrue. A PD was fired in Rochester for accepting the latest record company
scam, giving gift cards 2to give to listeners" which the PD kept... that was
last week. There were a half-dozen indictments about 5 years ago in CA,
resulting in two convictions.

> Back when there was payola, PDs
> were happy to play new music, because the record companies paid them to

> play new music.

The practice was never prevalent, and most PDs knew it was illegal and a firing offense, too. Few station staffers ever took payola. And even when givin, it affected only the biggest stations in the biggest markets.

>  Now everybody is terrified of playing new music, so they
> all have become followers.

Everyone realizes the average listener only wants to hear a small bit of new music.

>  Payola is what kept radio fresh and interesting
> for years, and what you're seeing with the current homogenization of
> commercial
> radio is what has happened as a result of it being eliminated.

It was never widespread. Your theory is wrong.

Nonsense.  There is Spanish language all over the station.  It's aimed at Spanish speaking people who might just happen to know English out of begrudging necessity.  Speaking of a racist agenda, somebody please tell me with a straight face that a station with a slogan "European and Proud" would get a pass?  I don't even think "Black and Proud" would get a pass.  I've said it before, and I'll say it again, people sure have no qualms about flocking to this nation filled with opportunity that white Europeans happened to build.  It's fashionable to hate Whitey and quash his culture after you  greedily take what he's built and complain on top of it.  Sure, some groups were exploited as this nation was being constructed, which was wrong and unfortunate.  However, they were no more exploited than they would have been in their home countries, as evidenced by dominant African tribes selling people from conquered tribes to Dutch/Arab traders. Here's another one for you - black people were enslaved by other free black people in Louisiana and elsewhere.

You are in for a treat!

US satellite radio broadcaster Sirius has signed a deal with the English
Premier League to carry soccer commentaries. The deal, effective
immediately, runs through to May 2007. Subscribers across America will be
able to tune in to regular live and delayed coverage of English football.

A new mediumwave station has begun broadcasting in Alaska on 1110 kHz. DXpeditionists in Lemmenjoki have told DXing.info that KAGV was first picked up on November 20 by Hannu Niileksel� in Finland, presumably with a test transmission.

Only if you accept the thesis that "the average listener" is a
drooling idiot.

Of course, since two decades of radio programming directed towards
morons has driven many non-morons away from radio entirely (at least
as a source on musical entertainment), this could now reasonably be
stipulated as the audience living up (or rather, down) to programmers'
expectations.

Text of report in English by Romanian news agency Rompres

Bucharest, 26 November: November seems to be a popular month for launching new radio stations as Radio 3 net has already had its official opening and Radio Info Pro and Guerrilla Radio are in the pipeline.

Radio 3 Net is a new brand from the Romanian Broadcast Society and can be accessed on the internet at www.radio3net.ro.

"The project of re-engineering the entire station is complex and we have allotted 6.5m euros for this. An additional 2.5m euros are coming and will also include Radio 3 Net," said Dragos Seuleanu, president of the Romanian Broadcast Society.

The team of the new station is managed by Florian Pittis and includes Jerry Schwartz, Sorin Chifiriuc, Lenti Chiriac, Marcel Platon and Florin Zegrea. The station airs quality music, cultural news, sports, financial and legislative information as well as entertainment, information about administration, jobs, IT and media.

Academia Catavencu group is to launch a new radio station managed by Razvan Exarhu, following an investment of about 500,000 euros in the first year. The station, whose most publicized potential names are Crazy FM and Guerrilla, replaces Radio Fun on the 94.8 MHz FM frequency. The station targets people between 20 and 45 years old and its format includes 70 per cent entertainment and 30 per cent editorial.

The operator of the broadcast licence is Fun Radio SRL, whose ownership includes Academia Catavencu SA with 50 per cent of the shares and the editorial control, Regent House, part of Regent House Properties Limited owned by Nicolae Ratiu and Calin Husar, who is involved in B-24-FUN guide along with Academia Catavencu. The audience objectives include ranking in the top five by 15 March 2005 and in the top four by 15 September next year.

I wouldn't call that payola, though, David.  That's just fraud or larceny.  But the problem remains that in its executed form (where said gift cards actually go to said listeners), it's still a corruption of the way things should be.  The gift cards would have augmented the station's promotion budget, thus enabling the station to, perhaps, capitalise on the opportunity to greater financial rewards...and all the PD had to do was "give a moment of consideration" to the list of otherwise unremarkable recordings.

Payola or not, anyone having an interest in the music business should be barred from offering any rewards to the outlets or their representatives who make decisions on whether or not that outlet should be playing the output from the music business.

Like that's going to happen anytime soon.

Hi,

I noticed another FS posting in rec.radio.broadcasting and since it IS
radio equipment for sale, I believe this is allowed. If not, please
let me know and I will not post another article with this equipment.

I have seen these receivers for sale on a used radio equipment website
(Bay Country) for $899 used.

http://www.baycountry.com/used_equipment.html

I will sell the one I have for $595 and shipping. It works great, and
looks great. Very gently used. Use Paypal and you can use Paypal Buyer
Credit to pay off over several months if approved. I also would accept
checks/money orders.

Contact me if you have any questions, and thanks. I only have one so first come, first served.

Consumer impedance is HI Z (10-20K) not 8 ohms...
Only SPKR out is 8 ohms......two caps in series will not match low to medium
Z....only a xfmr will do that....

For consumer line to PRO connection, you can do this:
tie consumer ground to Pro shield.....
tie consumer high to either PRO + or - input...
leave remaining input floating....do NOT ground or tie to other input (this
will be close and give you a good enough range to work with)..

Wednesday, 24 November 2004

On Friday (19/11), the UK based Christian Broadcasting Council, held its Annual Media Awards for 2004 at the Holiday Inn in Stoke-on-Trent.

The awards covered the whole range of television and radio in the UK and our awards went to a variety of organisations covering both mainstream broadcasters and some satellite channels.

The Association of Christian Writers helped CBC in the judging of the section of the awards for Christian writers named Fred Grossmith Awards, in honour of the writer and past Vice President of CBC the Rev Frederick T Grossmith who went to be with the Lord in 2002. Fred was always keen to encourage Christian writers and scriptwriters.

All CBC awards are judged on their excellence of production and on their Christian content.
In addition an award was made this year of the J Q Davies Award, named after the founder of CBC. The award is periodically given for innovation and achievement in the area of Christian media.

Ram Gidoomal CBE of South Asian Concern presented the awards. The winners in the radio categories are as follows:

Best Christian Radio Ministry Programme:

Gold Award
'Sunday Worship' - The gospel in the market place.
BBC Radio Religion & Ethics
Produced by Philip Billson
For BBC Radio 4

Silver Award
'Peter's Story'
GRF Christian Radio

Produced by Brian Muir
For various stations throughout Easter 2004

Bronze Award
'Celebration'
BBC Wales - Religion
Produced by Karen Walker
For BBC Radio Wales

Best Christian Radio Speech Programme:

Gold Award
'A Borstal Good Friday'
HCJB-UK
Presented & produced by Colin Lowther of HCJB-UK
For Pulse Classic Gold

Joint Silver Awards
'About a Cross' - narrated and performed by Rob Lacey
Produced by Karen Walker and Sian Baker
For BBC Wales
'The Passion of the Christ' - The Discussion
Presented by Mike Shaft & produced by Ali Hutchison
For BBC GMR

Joint Bronze Awards
Bronze Award
'After Life'
Produced by Celia Kellett
For BBC Radio Nottingham

Bronze Award
'Golgotha Live'
Produced by Justin Brierley
For Premier Radio

CBC was founded in 1983 to sponsor and support Christian broadcasting in UK and its membership includes both UK independent Christian broadcasters and individuals who support the need for strong independent Christian companies in both the broadcasting and production sector of the radio and TV industries.

An Afghan radio station has appeared on 1602 kHz mediumwave and has been heard all the way in Europe. Martti Karimies from Finland was the first to pick up the station on November 20. Later the station has been identified as Radio Khost.

This week and already online at www.justofftheradar.com:

A conversation with reknowned BBC DJ Charlie Gillett looking at his
latest world music compilation for Wrasse Records, World 2004.

Plus the following great music:

FROM BUBBLEGUM TO SKY - "THE GURLS AND THE SHOO BE DO WOP"
NICK CAVE - "BREATHLESS"
NOISETTES - "UNTITLED"
FAT MARLEY - "XIN"
OJOS DE BRUJO - "TANGUILO DE MARIA"
KHALED - "MADRE"
BETTYE SWAN - "DON'T YOU EVER GET TIRED OF HURTING ME?"
MASERATI - "TOWERS WERE WIRES"

Just off The Radar: "FROM FOLK TO TECHNO AND EVERYTHING IN BETWEEN..."

About the only thing that Gore managed to actually do in Tennessee was get Residential ISDN handled the same as a standard analog circuit.. The equipment was pricey, but other than that, it was the same price as any other residential loop.  In Florida?  Priced -above- the roof. Way over it.  When I asked for ISDN, I got told the circuit would be something like $118 a month, plus $.10 per minute while it was "off the hook".. plus so many cents per operation on the control circuit. (Pick up and dial, another $.10..that sort of thing.) - If you used both channels, double the per minute rate.  In short, a huge ripoff.. (And they also jacked up the long distance rates through the roof as well.)

>I dunno, but I'd sure like to be able to order 48F burglar alarm circuits
>from the telco again.  Now THAT was a cheap way of doing remote work.  And
>sometimes it even sounded good.
>--scott

Same - given a bit of inspiration, a friend down there ended up have a monitoring circuit from his house to his ISP.  Instant T1...

Hello - I wanted to send you some info I think the About.com users would find usefull.  It's a new website aimed at smaller radio stations who need voice-over work for commercials, liners, etc.

Free Voice Over Exchange Service
Have you ever wished that you had more variety when it comes to voices on your radio station? Most LPFM and small NCE stations don't have the budget to keep a full staff of people. So it usually comes down to one or two people doing all the spots, liners and bumpers. Well - no more! With our new service and your assistance, we can all come together through this new free service and share our voices! The concept is simple - you need a spot or liner read? Just log into the website, upload the copy and one of our other members will read the copy and upload the spot back to the site for you to download! Walla - a new voice for your station. We only ask that you offer the same in return to our members.  Check it out at

Chris: << Consumer impedance is HI Z (10-20K) not 8 ohms... >>

Ah so... I misunderstood that part. Further:

I was wondering about that series cap thing myself. I've been retired for a dozen years but it didn't look right. I expected a network with different values at each port. But I recalled it being a suggestion from Hamilton, the maker of the Rangemaster AM1000, a Part 15 AM transmitter.

The Radio Shack transformer was my own suggestion (now moot) to the fellow, whom I recall asking about matching a CD player to a line input.

Even in my old age, I need to resume checking other people's suggestions myself before recommending them to anyone else. (Sigh...)

Bill,
K5BY

With clear, near-FM quality sound, excellent reception and dramatic improvement over analogue, Digital Radio Mondiale (DRM) will revitalize radio in markets worldwide.

Traditional AM can travel great lengths along the curvature of the earth, but it is notoriously prone to disturbances. The same holds true for short wave, which can reach the other side of the planet by bouncing a signal off the ionosphere. But its reception is prone interference from solar conditions, the time of day and year as well as the distance between the transmitter and the target receiver.

There is a global trend towards the adoption of digital technology in radio and communications, especially for distribution and transmission. Digitalization offers many substantial advantages to national/international broadcasters and info casters. We are seeing the introduction of high quality delivery systems in homes. FM sound broadcasting is gradually moving to a DAB standard. But coverage on FM 88-108 MHz (VHF) is limited. For many national and international broadcasters, the advantage of a complementary digital broadcast system below 30 MHz is gradually emerging. However, the limited fidelity of existing AM services is causing listeners to search for other alternatives.

Implementation of digital radio in today's AM bands (i.e. long, medium and short wave) will enable operators to provide services that should be successful with both existing and future high-quality services operating on other parts of the dial. Digital broadcasting on short wave, medium wave, or long wave (AM) is highly advantageous when compared to the conventional analogue system that is now in use.

Digital Radio Mondiale (DRM) is a fast emerging domain that combines the benefits of FM and AM. This has FM like sound quality with lesser multi-path interference and the reach of AM. Some DRM receivers and equipment are already available to broadcasters and consumers, with more expected throughout 2004. Besides providing near - FM quality audio, the DRM system has the capacity to integrate data and text. This additional content can be displayed on DRM receiver to enhance the listening experience.

Unlike digital systems that require a new frequency allocation, DRM uses existing AM broadcast frequency bands. The DRM signal is designed to fit in with the existing AM broadcasting AM broadcast band plan, based on signals of 9 kHz or 10 kHz bandwidth. It has modes requiring as little as 4.5 kHz or 5 kHz bandwidth, plus modes that can take advantage of wider bandwidth, such as 18 or 20 kHz. Simulcast testing is underway. Many existing AM transmitters can be easily modified to carry DRM signals.

The DRM technology works by encoding the signal using MPEG 4 compression to make it fit the existing AM bandwidth. While minimizing interface, the digital technology has only two modes: reception and no reception. Hardcore short wave fans who appreciate the challenge of deciphering short wave broadcasts unperturbed by the notorious fading may lament this. But near FM digital quality makes short wave interesting for an audience that has never touched a world band receiver before. Another advantage is that DRM requires only 10% of the power needed for traditional short wave transmission and therefore, for broadcasters, new transmission equipment pays for itself. Furthermore, DRM allows for dual transmission mode, broadcasting analogue as well as digital.

DRM applications include fixed and portable radios, car receivers, software receivers and PDAs. Depending on broadcasters preferences, the DRM system can use three types of audio coding. MPEG4 AAC audio coding augmented by SBR bandwidth extension is used as a general-purpose audio coder and provides the highest quality. MPEG4 CELP speech coding is used for high quality speech coding where there is no musical content. HVXC speech coding can be used to provide a very low bit-rate speech coder.

Today, DRM is the world's only non-proprietary, digital system for short, medium and long wave with the ability to use existing frequencies and bandwidth across the globe. It is the only digital radio system recommended by the international telecommunication union (ITU) for all the three radio bands below 30MHz short wave, medium wave, and long wave. In January 2003 the DRM consortium took the first hurdle in standardizing audio broadcasts on the AM bands when the International Electro-technical Committee (IEC) granted the DRM transmission technology an international standard.

Since DRM's inaugural broadcast on June 16, 2003, more than 60 broadcasters have started transmitting their daily, weekly or periodic DRM programs. Thereafter, an increasing number of broadcasters started their DRM transmissions. In August 2003, DRM and the World DAB Forum announced their cooperation, paving the way for DRM and DAB capable receivers. Sony has committed to help expand the markets for digital radio in Europe, pledging its active support in the commercial sectors of both DRM and World DAB Forum.

India remains oblivious to the benefits of such a platform; leave aside launching this technology. While speaking to India's only radio network in this context, few were even aware that radio was on the threshold of going digital!

(Recently published in AV MAX, an audio-visual monthly publication.)

Hmm. I've signed several employment agreements as well as employee
manuals that require me either to not accept anything above a certain
value (lunch not included) or return the gift to the sender.

Boston Gas sent a toy locomotive to me at Christmas one year. I was
working for GE's WJIB(FM). Their campaign was called the "Montreal
Express," named for the cold winds from the North. I had to return it.

>>
A new mediumwave station has begun broadcasting in Alaska on 1110 kHz.
>>

Note that most MW stations operating on clear channels in Alaska are Class A stations.

This new station is a Class B station, even though it operates at 10 kW ND-U.

by Ananda W. P. Guruge

This article is published to commemorate the birth centenary of veteran broadcaster A. W. Dharmapala which fell on November 24.

While radio broadcasting was still in its earliest stages in Sri Lanka, Radio Ceylon evoked wonder and curiosity. Not only the presenters of programmes but also technical personnel who brought the magic of music and voice to a little box on the mantle received special attention. A name mentioned in connection with the first Sinhala broadcast was that of A. W. Dharmapala, the young and enterprising engineer. It was his voice that the people of Sri Lanka heard in Sinhala over seventy years ago.

My close and memorable association with Dharmapala goes way back to 1951 when as a graduate student I had the privilege of being a regular broadcaster in Dr. Ediriweera Sarathchandra's "Shastriya Sangraha". Those were days when Radio Ceylon (as the Sri Lanka Broadcasting Corporation was then known) had not yet come of age and the production of a programme needed constant technical support. Breakdowns were frequent as microphones went out of order or recording machines refused to work as needed.

## Technical aspects

All broadcasters, especially those of us who delivered our programmes live late in the evening, were relieved to find Dharmapala, the Outdoor Broadcasting Engineer, ready at hand with his wide repertoire of technical skills, ever smiling and always cooperative. No task was too small for him. His single-minded dedication to improving the technical aspects of broadcasting ultimately resulted in a fault-free technical infrastructure, which is undoubtedly to his lasting credit. It was thus we became friends and our friendship lasted many decades.

I came much closer to him both physically and in work in 1954 when I was entrusted with the organization of the national celebration of Buddha Jayanti to mark the dual occasion of the 2500th anniversary of the Buddha's death and the founding of the Sinhala kingdom in Sri Lanka. My office was in the Home Ministry located in Torrington Square and from my office to Radio Ceylon was a brief walk of two minutes by backdoors of both buildings. The point of entry to Radio Ceylon for me was past Dharmapala's office.

As the Buddha Jayanti Programme depended heavily on the radio, I was at Radio Ceylon practically every day and some days several times. Often I needed to have Dharmapala's advice and direct involvement, especially as the entire Outside Broadcasting Operation was under his control. Buddha Jayanti activities were broadcast from all over.

## Complicated operation

A very complicated operation was when the switching on of the lights on the path to Sri Pada was an occasion when Justin Kotelawala (representing the Prime Minister, Sir John Kotelawala) and I were to speak from the Uda Maluwa. Kotelawala was very diffident whether we had the capacity to do so and I assured him that Dharmapala was there to ensure that all that was technically feasible would be perfect.

It was really so and the ceremony was heard clearly without a hitch all over the island. An eager listener in Colombo was the Prime Minister himself who had a personal interest in the supply of electricity from Lakshapana to Sri Pada as the fulfillment of a vow. I told him of the most efficient and helpful Engineer of Radio Ceylon and his staff who made this broadcast possible.

An immediate result of Dharmapala readiness to cooperate fully in the Buddha Jayanti activities was that he was entrusted with equipping a mobile public address and outdoor broadcasting unit for the Lanka Buddha Mandalaya. Walkers Limited was supplying the van but it was the Prime Minister's own decision that the technical aspects of the project was to be entrusted to Dharmapala. It was no easy task because he did it entirely as a voluntary activity outside his normal office hours. I have often been to the workshop after office to find that Dharmapala was not only doing all the technical designing but also taking upon himself the detailed tasks of wiring and fitting sophisticated equipment.

For 1955, we had the most up to date broadcasting unit performing a wide variety of activities. The unit was used to send monks all over the island to preach in villages which had no monks. It handled all outdoor broadcasting activities from every nook and corner of the country. So conscientious and attached Dharmapala was to his project that he personally serviced the equipment periodically and looked after its frequent upgrading.

Posting for sale in a discussion newsgroup is generally not allowed. If the

word marketing isn't part of the newsgroup name, ads are not supposed to be posted. Since you're posting from a Level3.com IP, their acceptable use policy on this is clear: http://www.level3.com/764.html
"Continued posting of off-topic messages, including commercial messages (unless specifically invited by charter), is prohibited."
I doubt you can find a charter for alt.radio.broadcasting that says commercial or for sale messages are invited. Absent such a charter, your ISP's rules would prohibit them.

Does Haliburton do radio and TV? If so, the contract has already been
awarded.

Each of those fragments is composed of enough people to be considered a mass. Now they're targeted masses. Coke still mass markets. They just use several different roads to get to the same place - a Coke in every hand.

Only if you actually ask, as I do, tens of thousands of listeners a year
what they want to hear. essentially non want to hear more than a small
number of new songs each week.
>
> Of course, since two decades of radio programming directed towards

This is true of most human beings, radio listeners or not. The unfamiliar is harder to assimilate than the familiar. Go to a club sometime and see which songs the folks dance to... is it the unfamiliar or the known? Go to an artist concert... when do the folks applaud? I'll bet it is when the artist sings the big hits, not when they sing the unfamiliar new stuff they want to hype from the new album.

95% of Americas listen to radio. Either you are wrong, or there are not many bright people in America any more.

It's clear payola. every communications attorney in the US sent a note to
clients saying about the same thing, too.

The record company said, "Hey, Mr. PD, here are a few thousand dollars in
gift cards for on air promotion. (wink, wink). why don't you give them away
on the air... if you want."

the idea was that if they did nto get given away, the record duck was not
going tocompalin, and the PD could go on a shopping spree. Clear and present

payola.

> But the
> problem remains that in its executed form (where said gift cards actually
> go to said

There was no intent to give anything to listeners.

Artist based promotions have been a legal and legitimate synergistic
promotion with radio for many, many decades. As long as there is disclosure,
it is legit. The minute management approves, there is no payola possible.

Neuman KM-183

Those RE-20s are a joke.  Major pain in the ass to hang.  The Neumann sounds better and is reasonably sized.

A step-up transformer IS one way of approaching the problem. It gets you voltage gain at the expense of current loss, and if you are going into a modern high-Z balanced input so you don't need to drive a 600 ohm load, it's a good way to go. BUT, good transformers are expensive and cost a good bit more than the electronic bump boxes.

The consensus in rrb from the regulars seems to be that it's ok as long as it's radio equipment, so I let on-topic FS posts go through.

Sunday, November 28, 2004

The current owner of the radio ship MV Communicator, Dave Miller, is advertising the ship for sale.

An advertisement on his Web site invites offers over �25k, but says that no radio equipment is included in the sale.

I think you might be right -- provided someone doesn't create a lot of
static for the SW spectrum.  This is what some predict concerning
broadcasting over the power lines, whatever that is called.  (Man, the
"senior moments" are something!  ;-) )

The future of shortwave will be spotty. Broadcasts to developed countries in North America, Europe, and Japan/South Korea will be a thing of the past because of satellite media. Some shortwave receivers are cheap, compared with satellite receivers, and will be still be used in the third world. As long as governments and religious groups want to convey their messages to these people, shortwave will still exist. For North Americans, the dx possibilities will be amazing. With high powered stations beamed away, it will be easier to get unusual broadcasts.

Hi Folks:

I'm in need of a link to an inexpensive adapter to use a consumer unit in limited broadcast service.  Most of the ones I've found on a Google search are worth twice the cost of the cassette machine it will be attached to. Since the fidelity of cassettes isn't all that great, the specs on the line driver need not be super-fabulous.

A kit is fine too.  Any suggestions?

Thanks for the opportunity to pick your brain.

Regards,
Lee

Hey Scott, do you know a place where I could get simple instructions for an AM loop antenna for a modulation monitor?  I have a surplus TFT 713 and would love to use it to pick up 630 WMAL at home. Belar wants $345 for one of their circular antennas but I'm sure I could build one cheaply with some PVC, wire and some caps, right?

The possibility of having to learn another language is very real. I see radio being used to cover large areas which are not profitable to wire for cable and phone. Many parts of South America, The Middle East and Asia come to mind. There are many more sub locales, I'm sure.

The use of the major European languages will continue to decline, Spanish excluded.

I suggest that without the big name broadcasters to draw folks to broadcasting, there will be lesser listenership and less reason for dx stations to remain on the air.  Broadcasting is expensive as all getout, especially for poor countries.  The justification for reaching listeners outside said poor country is slowly fading away and with the internet, cd distribution and the like, the need to listen to shortwave for music and entertainment is slowly fading away too.

I'ld love to see SW broadcasting remain, I'm not always near an internet connection and all too many of the SW broadcasters I used to regularly listen to, now have skimpy or no signals with me using better receivers than I even dreamed about when I first started listening years ago.  I just don't see it continuing for long.

```

Interesting question. Suppose with some of the bigger powerful stations out of the way, we might hear some of the quieter ones that we never could before!

That would be something good coming out of something bad!

Mark.

Auckland
New Zealand.

I am looking for TV and radio broadcasts of the JFK and RFK assassinations. I am particularly interested in audio recordings of such broadcasts made by amateurs.

If you personally tape-recorded -- or know of anyone else who tape-recorded -- any television or radio broadcasts concerning one or both of the two Kennedy assassinations in 1963 and 1968, please contact me.

Whether it's a network or local broadcast, whether the sound recording of that broadcast is of good quality or poor quality, whether it was recorded in a major market or in a minor market, I want to know about it.

I'm a collector, so if you have any of this or know about someone else who does... please email me or have them email me at:

bkj333@aol.com

Thanks!

Probably a large part of his problem is that WFAN is on 660, not 770. ;)

He should try a GE Superadio or a Tecsun BCL2000

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5733726786
I prefer the Tecsun because of the digital readout and better wide/narrow filters than the GE. Both do amazingly well with no external antenna. Bbut both also have external antenna inputs, with which you can try anything from long wire to the C Crane twin-coil antenna
http://ccrane.com/am-antenna.aspx

My pal would probably listen to that, static and all.

I'll check out the Sony and help him play with antennas. I understand
his pain....should a longwire be any particular length for an AM
station at 770??? And is this one of those "yeah, a mile and a half"
issues??? My friend does have a house with a fairly good-sized yard...

I think this could happen, though I suspect that when a certain 'critical mass' of major broadcasters leave shortwave, the resulting vacuum will draw in others or perhaps convince some, who earlier shut down, to start up again. But whatever happens, I think there'll always plenty of interest to listen to on shortwave....unless broadband over powerlines completely destroys everything.

Steve

The whole point is that these are NOT court-ordered fines, only administrative penalties that can only be enforced by whining to credit agencies or witholding licenses-wait a minute, WHAT license?

Even CRIMINAL fines imposed buy federal courts statistically go 90% uncollected. Many are imposed agaisnt people without income or assets, and of course are never paid.

Monday November 22

LONDON and WASHINGTON, Nov. 22 /PRNewswire/ -- WorldSpace, Inc., the pioneer of direct satellite delivery for digital audio radio services (DARS), successfully demonstrated today Data-casting and IP Multicasting capabilities at the Global Military Satellite Communications Conference being held in London. The demonstrations are being conducted using live data transmitted in near real time using the WorldSpace AfriStar satellite over the west beam.

(Logo: http://www.newscom.com/cgi-bin/prnh/20040319/WORLDSPACELOGO )

With the new Data-casting and IP Multicasting capabilities service, clients can up link their existing content to a WorldSpace satellite where it is down linked to inexpensive transportable receivers containing small built-in 4-inch dish antennas. The receivers, designed and mass-produced exclusively for WorldSpace, contain data ports that enable direct transmission of data and audio content to computers. Through this service, clients anywhere within the coverage area will be able to listen to live audio discussions combined with a slide show on various topics, thus stimulating a 'virtual classroom.'

"We are excited to have the opportunity to showcase our services at such a respected gathering of global military satellite communication experts," said Noah Samara, Chairman and CEO of WorldSpace, Inc. "The WorldSpace Datacasting and IP Multicasting system will allow clients to reach vast new audiences where traditional radio, or Internet services are either limited or not available. Potential users will find that our system provides dramatic efficiencies over using two-way systems for this broadcasting type use."

About WorldSpace
WorldSpace is the pioneer of direct satellite delivery of digital audio radio services and serves Asia, Europe, the Middle East and Africa. Through its subscription-based service, WorldSpace broadcasts news, music and educational programming to a global service area that includes more than four billion people and targets its programming to consumers, governments, and other organizations. The company leverages its two geo-stationary satellites, AfriStar and AsiaStar, and its ownership of broad spectrum licenses to deliver more than 100 digital quality audio channels per satellite as well as multimedia content directly to portable receivers. Headquartered in Washington, D.C. and with offices in Europe, Asia, Australia, the Middle East and Africa, WorldSpace is led by a seasoned management team with deep radio, international broadcasting and communications experience. For more information, visit our website at http://www.worldspace.com.

The evangelists will be on shortwave as long as they think there are a few
people out there listening to SW radio.  As government and commercial
concerns lose interest in SW, it's conceivable that others will fill the
vacuum with inexpensive pirate operations based on ham radio gear.

```

The Superstation's three-month trial licence expires at 7pm on Tuesday, November 23, after which all broadcasts from the radio ship in St Margaret's Hope must cease.

But the good news for fans is that it may be back full time next year.

Managing director David Miller said an application would be made to Ofcom for a full-time licence.

Saturday, 20 November 2004

Listeners in the United Arab Emirates will have the opportunity to hear a wider range of BBC World Service programmes when two FM relays revamp their schedules to include BBC programmes in English.

Starting Sunday 21 November, the 90.3 FM frequency in Abu Dhabi and the 87.9 FM frequency in Dubai will broadcast nine hours of BBC English programmes between 09.00 and 18.00 local time.

Listeners will continue to receive a further 15 hours of programming in Arabic on both frequencies.
Jerry Timmins, Head of the BBC Africa & Middle East Region, BBC World Service, said:
"I am delighted. Thanks to this development, listeners can now hear for the first time the full range of BBC programmes in English in crystal clear quality in addition to the BBC Arabic programming."

Listeners in Greater Dubai, Sharjah, Ajman and Umm al Qaiwain can now receive a wide range of BBC programmes in English from health and sport to business and music.

The BBC Arabic service has more than 13.5 million listeners in the Middle East and North Africa and can currently be heard on FM in Bahrain, Iraq, Jordan, Kuwait, Qatar and Sudan.

>The whole point is that these are NOT court-ordered fines, only administrative penalties that can only be enforced by whining to credit agencies or witholding licenses-wait a minute, WHAT license?<

Wrong.  The FCC has several means of collecting fines:

1) Withholding action on any or all applications of the licensee pending before the Commission until any outstanding fines are paid.

2) Turning unpaid fines over to the US Attorney having jurisdiction over the fined party's last known address.

3) In turn, the US Attorney can obtain a court order attaching monies or assets sufficient to pay the fine.

>Even CRIMINAL fines imposed buy federal courts statistically go 90%
uncollected.<

Proof?

The Toys for Tots should be fine with just a long wire attached to the
input.  The loop antenna will have lower gain but higher directionality.
The real deal with the loop antenna, though, is that the gain on it is
calibrated and you're paying for the accurate calibration of a measurement
device.  You don't want a measurement device, you just want as much gain
as you can get.

>Dave Sproul, Bethesda. MD

Since Hardin and Weaver are gone, there's no reason to listen to WMAL.  But I am
up in your neck of the woods on a monthly basis if you want to bring it over
and try it with a wire.

>What do you think?

I think that unless the FCC starts actually enforcing Part 15 regulations for a change, that QRM is going to be more of an issue in the future than interference from the powerhouse shortwave stations.

I also think that MW DXing is either going to be dealt a huge blow from IBOC, or it's going to be considerably improved by the stations reducing channel bandwidth in preparation for IBOC.  It's certainly going to change.

But, much as we are disturbed by the impending implementation of BPL, it is no worse than many other interference sources which are currently illegal and about which the FCC does nothing.  These problems will just continue getting worse.  Touch lamps a mile away are clearly audible on 80M here. Now imagine that multiplied a millionfold in an urban area.  You think Wal-Mart cares that they are selling products that don't meet FCC regulations? You think the FCC even cares?

The Internet being the end of short wave is an old refrain. I have not
tried streaming news from the BBC web site lately but in the past it has
been just terrible and I have a DSL connection. Audio and video was full
of artifacts and slow. Audio from the BBC sounds much better over short
wave than over the Internet.

So get a used one.  Bump-boxes show up all the time with the used equipment
suppliers.

Or get a console that can take a consumer level input.  Most broadcast
consoles do have some trim resistors that can be swapped out to change
the nominal input levels.

Some thoughts on the future of shortwave broadcasting:

1. Internet over power lines (BPL) is a stillborn technology, arriving ten years too late to have any impact. The explosion in broadband connectivity is already here, and it's a wireless future. I'd be surprised if the technology lasts more than two years, with only minor rollouts in rural areas. The nail in the coffin will be subscribers losing their connection every time Joe CB'er down the block keys up. I don't see BPL noise as a factor in shortwave's future prospects.

2. One by one, the industrialized nations will find the internet a neater, cheaper way of reaching their target audience, and their shortwave operations will end, except for

3. DRM, digital broadcasting over shortwave. This broadband technology cannot continue to co-exist on the same bands as analog broadcasts or services (just listen how Deutsche Welle's DRM sender trashes the entire 3950-4000 kHz sector of the U.S. 75 meter band). I don't see DRM as becoming a major player in world broadcasting, because a) the proprietary nature of the technology will impair its proliferation in cheap encoders and receivers, and b) satellite-delivered radio can provide a more stable, more dependable, higher-quality signal to most corners of the globe.

4. More and more antiquated shortwave transmitters - many installed during the colonial era - will break down, and become a low priority for repair, because...

5. FM (VHF) coverage will continue to increase in the developing world, negating the need for regional shortwave operations.

The "DX targets" all of the above will leave will be:

6. Clandestine broadcasters, targeting strife-torn areas where the broadcasting infrastructure is impaired;

7. Intermittent pirate "broadcasters;" and,

8. Religious broadcasters, who will snap up fire-sale equipment and airtime and pretty much take over the international broadcast bands.

10. Eventually, world regulatory agencies and the ITU will examine the state of international broadcasting and see that it has turned exclusively into a fundraising tool for bible thumpers. At this point, they will be hard-pressed to justify maintaining the valuable spectrum allocations for shortwave broadcasting. All of the current shortwave broadcasting bands will shrink to 100-200 kHz apiece, and some will vanish altogether, as the worldwide demands for digital data spectrum increases.

11. Our lovely shortwave radios will end up in the same junk heap as 8-track players, becoming collectable antiques in 75 years or so.

Al Q.
NY

>From the beginning of next year Luxemburg will run DRM transmissions on 1440 kHz. No clue, at what hours, I suspect, that they will use it during their own programming only and if the clients renting the transmitters want to use DRM. Let's hope, that at least they switch off the beast at nights.

I'm pessimistic concerning the future of MW-DX, I'm afraid that next year at this time we'll see a lot of channels occupied by DRM and reduced chances for TA reception.

I don't have a problem with DRM on shortwave, it's a nuisance, but I think, we DXers can live with it. But on MW DRM is absolutely lethal.

A little #22 magnet wire under the eaves will do an amazing job and
nobody
will ever be the wiser.  I did this in apartments and college dorms
for
years for receiving and transmitting.  I had a 40M dipole with trap
coils
between my balcony and two adjacent buildings even, once.
--scott

Can you elaborate?? (And presume I'm stupid about radio). Do you just
mean a long, straight run of #22 wire??? Or coiled?? Or what??  Thx
